## Schedule I.—COTTON MANUFACTURES.

### COTTON YARNS.

(Paragraph 250.)

TUESDAY, *December 29, 1896.*

#### STATEMENT OF MR. ARNOLD B. SANFORD, OF FALL RIVER, MASS.<sup>1</sup>

Mr. SANFORD said.

Mr. Chairman and Gentlemen of the Committee: We come before you this time, the Cotton Yarn Spinners' Association of America, to present to you our argument, written, as we understand that it is the wish of the chairman and the committee that this hearing shall be as brief as possible and the arguments condensed, so we prefer simply to hand our argument in in this form, and if the committee wish to ask any questions, of course we will be very glad to answer them.

The Cotton Yarn Spinners' Association of America would respectfully submit for the consideration of your honorable committee the following schedule for cotton yarns:

#### PROPOSED TARIFF.

##### *Schedule I.—Cotton manufactures.*

250. Cotton-carded yarn, warps or warp yarn, in singles, whether on beams or in bundles, skeins or cops, or in any other form, except thread of cotton hereinafter provided for, not colored, bleached, dyed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, three cents per pound on all numbers up to and including number fifteen; on all numbers from number sixteens to thirties, inclusive, one-fifth of one cent per number per pound, and on all numbers exceeding number thirties one quarter of one cent per number per pound.

Colored, bleached, dyed, combed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, whether on beams or in bundles, skeins or cops, or in any other form, except thread of cotton hereinafter provided for, six cents per pound on all numbers up to and including number twenty, and on all numbers exceeding number twenty three-tenths of a cent per number per pound.

Cotton manufactured in the form of card laps, roping, sliver laps, or roving, forty-five per centum ad valorem.

After a thorough trial of the practical working of the present cotton-yarn schedule during the past two years, while still believing in and recognizing the correctness of the principle upon which it was originally drawn, and which we indorse as the only practical method of levying duties on cotton yarns, the same has been rendered inoperative by the provisos adopted by the Senate Finance Committee, and against which our association, through its president, promptly put on record their protest in the

<sup>1</sup>Mr. Sanford represented the Cotton Yarn Spinners' Association of the United States.

form of the following letter, of date June 12, 1894, addressed to Hon. Nelson W. Aldrich, of the committee:

FALL RIVER, MASS., *June 12, 1894.*

Hon. NELSON W. ALDRICH,

*United States Senate, Washington, D. C.*

MY DEAR MR. ALDRICH: This morning's papers inform us that the cotton schedule has finally been adopted in the Senate, without any opposition. I note your remarks in regard to the same, as being the most scientific schedule that has ever been presented. This is so; you have made no mistake in making that statement. There has been a great deal of time and hard and intelligent work put into this schedule, and it has been the endeavor of those interested in the preparation of these cloth and cotton yarns schedules to have them made scientific and applicable to the business which we are following.

The McKinley bill, by assessing duties on the values of the yarns, has become, by the lowering of the values during the past three or four years, largely inoperative, especially on fine counts above 60's yarn, for the simple fact of the fearful decline in the valuation of yarns in England. Yarns that were formerly valued at 40 cents per pound have declined to about 25 cents per pound. Hence the duty which is applied to yarn worth 40 cents per pound three years ago becomes inoperative to-day.

The yarn schedule, while prepared scientifically, I regret to say has not been adopted so by the Senate. In other words, the committee which had this in charge here in New England tried to make a just discrimination between carded yarns and combed yarns, and accordingly prepared their tables to give a proper discrimination between the carded and combed yarns and twisted, bleached, and colored yarns, on account of having a great deal more labor involved in their cost of manufacture; also combed yarns should have received at the hands of the Senate proper and just recognition for that classification of yarns. As adopted by the Senate it gives us the same duties on the carded or cheaper qualities as it does on the combed or more costly qualities of yarns. The latter should have had a different rate of duty allotted to them. In other words, the schedule should have been at the rate of one-third of a cent per pound per number instead of one-fourth of a cent per pound per number, and the provisos to the present bill, which I have always objected to, should have given a larger rate per pound on combed, twisted, bleached, and colored yarns than on the ordinary carded yarns.

As president of the Cotton Spinners' Association of New England, embracing all the leading cotton-spinning yarn mills of New England, I desire to go on record at this time by saying that, while we are very grateful for what we have received from those in charge of the tariff bill in the Senate, by according to us the duties passed by the Senate, yet I feel it is my duty to say that we accept it under protest, as we are not properly protected on the fine-carded yarns, combed yarns, bleached and colored yarns. The duties as now given to us practically give to our foreign competitors our markets, both on carded and combed work, after we pass No. 50's. We have been struggling for all we are worth to obtain proper recognition for the fine-spinning industry of this country, such as the making of 60's, 70's, 80's, 90's, and 100's yarn, of which there are large importations constantly coming into this country. Our large spinning mills in New England have been built during the past four or five years with this trade in view, and now by the adoption of the present schedule we shall have to give up all fine yarns above 50's to our foreign competitors and make yarns in coarse numbers up to No. 50's. The provisos to the present schedule should never have been adopted. But, of course, we who have been framing and preparing this schedule know very well from whence the opposition emanates. Nothing that would exceed the McKinley bill would be adopted. If provisos had to be adopted on this specific schedule the rate should have been 10 cents per pound on yarn valued up to 25 cents per pound and 18 cents on yarn valued up to 40 cents per pound, and, if it is possible, I wish this might be adopted now. It is too bad to cut us down to 8 cents and 15 cents respectively.

While we recognize that we have received a much better bill than the Wilson duties ad valorem would have given us, and have obtained the valuable point of specific duties, yet it is only operative up to about No. 50's yarn. After that it practically becomes ad valorem, on account of the provisos as now adopted. So, with this end in view, I desire to protest against the provisos as adopted, also that no discrimination has been made between carded single yarns and combed, twisted, bleached, and colored yarns, which should have received a higher rate of duty—one-third of a cent per pound per number.

We trust sometime when our friends can have the framing of the bill that proper recognition will be taken of the fine-spinning industry of New England.

Yours, truly,

ARNOLD B. SANFORD,

*President Cotton Spinners' Association of America.*

P. S.—If within your power, please get the Senate Finance Committee to change the proviso from 8 cents to 10 cents and from 15 cents to 18 cents, and on the

combed, twisted, bleached, and yarn in colors to one-third of a cent per pound per number instead of having rate as now given apply to both carded and other qualities of yarn, which is an unjust discrimination against the higher cost yarns.

Our worst fears have been more than realized. The Wilson-Gorman tariff was enacted August, 1894, and went into operation, so far as the above schedule was concerned, upon its passage, and its effects were at once apparent.

The imports of cotton yarns, which during the year 1894 amounted to 747,838 pounds, valued at \$326,324, increased in 1895 to 1,784,854 pounds, valued at \$658,702, and for the present year, 1896, the imports of cotton yarns have reached the enormous total of 2,431,855 pounds, valued at \$872,067.

It is of importance to call the attention of your honorable committee to the fact that during the present year, while the importation of cotton yarns has greatly increased, the mills represented by our association have been compelled to shut down considerable part of the time, and our employees as well as ourselves have suffered heavily in consequence.

Upon examination of the importations of cotton yarns we find from the report of the United States consul at Manchester, England, that during the six months ending June 30, 1896, there were exported from that one port alone over 500,000 pounds of fine cotton yarns, exclusive of 292,372 pounds in the form of rovings to be spun into the finest yarns used in this country.

Upon analyzing above report we find the exports of the principal counts were as follows:

|                               | Pounds. |
|-------------------------------|---------|
| No. 50's, single.....         | 21, 376 |
| No. 55's, 2-ply.....          | 15, 402 |
| No. 60's, single.....         | 21, 139 |
| No. 60's, 2 twisted.....      | 64, 723 |
| No. 70's, single.....         | 5, 700  |
| No. 70's, 2-ply twisted.....  | 65, 334 |
| No. 75's, single.....         | 24, 818 |
| No. 80's, single.....         | 16, 335 |
| No. 80's, 2-ply twisted.....  | 64, 987 |
| No. 80's, 3-ply twisted.....  | 6, 540  |
| No. 90's, single.....         | 23, 615 |
| No. 95's, single.....         | 9, 647  |
| No. 100's, single.....        | 26, 871 |
| No. 100's, 2-ply twisted..... | 59, 406 |
| No. 100's, 3-ply twisted..... | 10, 071 |

The above figures demonstrate without further argument that the Wilson Gorman act, with its ad valorem provisos, does not protect the spinners of fine yarns in this country.

We therefore respectfully request that the present schedule be adopted with the provisos stricken out and with the addition thereto of the clause referring to other cotton manufacturers, including rovings, etc.

## COTTON ROVING.

The above article, not having been specifically mentioned in the present cotton-yarn schedule, has been imported in large quantities, not upon its value, but as ordinary yarn of No. 20's and under. As a No. 20's roving, after undergoing the comparatively simple operation of spinning, becomes a No. 100's yarn, this is not only a serious menace to the American laborer and manufacturer alike, but results indirectly in this Government being deprived of a large part of its legitimate revenue. This, if permitted to continue, as at present, would prove disastrous to the fine-cotton industry of this country, and the unintentional oversight in the present schedule should be promptly remedied by a specified duty of not less than 40 per cent ad valorem as recommended in our proposed amendment.

THE COTTON YARN SPINNER'S ASSOCIATION.

ARNOLD B. SANFORD,  
WM. D. HOWLAND,  
R. C. KERR,

*Committee.*

The CHAIRMAN. You have in your written statement covered the difficulties in the existing tariff, making suggestions, and giving the reasons therefor?

Mr. SANFORD. Yes, sir.

The CHAIRMAN. What are the difficulties in the existing tariff in reference to yarns?

Mr. SANFORD. The principle of the Wilson-Gorman act is all right—that is, specific duties—but the riders attached to the bill have simply made it an ad valorem tariff, so it is impossible for us to do any business in—

The CHAIRMAN. In regard to undervaluations?

Mr. SANFORD. Undervaluations. There are no yarns imported now at the rate of over 40 cents per pound; that is brought in at 25 and 40 so as to get it in at 8 and 15 cents duty; so it makes this bill inoperative for the fine cotton-spinning industry.

The CHAIRMAN. So there is a temptation for undervaluation where it can be done?

Mr. SANFORD. Yes, sir.

The CHAIRMAN. Do you make any suggestions as to the change of numbers in that statement?

Mr. SANFORD. Yes, sir; we have simply gone over that matter in this way. We are willing to accept of the present schedule with the provisos eliminated; that is, stricken out.

The CHAIRMAN. The two provisos are what you complain of?

Mr. SANFORD. Yes, sir; and we would say, furthermore, we have had two years' experience under this Wilson-Gorman act, and we know what we have asked for is just as little as we can get along with. We have tried to be moderate in our request.

The CHAIRMAN. Do you mean to say if the two provisos of paragraph 250 were eliminated that the paragraph then would be satisfactory as to yarns?

Mr. SANFORD. The schedule itself would be satisfactory.

The CHAIRMAN. Your complaint is that the provisos practically make the duties ad valorem and permit extensive undervaluations?

Mr. SANFORD. Yes, sir; and I would say, Mr. Chairman, at the time when this act was adopted that we, as spinners, saw the danger and made an appeal to Senator Aldrich saying, that if that measure was adopted the fine-spinning industry of this country would be practically blotted out, and if these provisos were to remain in the bill we could not do business, and our experience has demonstrated that we were right. We have lost the fine-spinning industry entirely; that belongs to our foreign competitors.

The CHAIRMAN. The two provisos read:

That in no case shall the duty levied exceed eight cents per pound on yarns valued at not exceeding twenty-five cents per pound, nor exceed fifteen cents per pound on yarns valued at over twenty-five cents per pound and not exceeding forty cents per pound: *And provided further*, That on all yarns valued at more than forty cents per pound there shall be levied, collected, and paid a duty of forty-five per centum ad valorem.

Do I understand you to say that makes that paragraph an ad valorem duty all through?

Mr. SANFORD. Yes, sir.

The CHAIRMAN. Although it purports to make them specific?

Mr. SANFORD. These provisos make the entire bill strictly an ad valorem bill, and there is one evil which has crept in it I wish to speak of. As an association we have had to be on the defensive for the last two years, and a very serious evil has crept in. After finding they could not bring in the finer numbers, such as they would like to, they have been importing cotton roving and it has taken the place of the yarn. They put that in the spinning frame and spin fine numbers out of it; that is, No. 20 hank roving—

The CHAIRMAN. And it is worked to your detriment as a manufacturer and has deprived the Government of revenue?

Mr. SANFORD. Yes, it has deprived the Government of a large amount of revenue. That you will find clearly set forth in this statement, Mr. Chairman.

The CHAIRMAN. Are the coarse numbers of yarns imported to any material extent?

Mr. SANFORD. No, sir; not to a great extent.

The CHAIRMAN. At what number does the importation begin?

Mr. SANFORD. In fine spinning we take about 50's. Up to No. 50 we have been able to do business, but beyond that we have lost the market entirely and there have been some very fine mills built in the last five years purposely for the fine spinning industry.

The CHAIRMAN. That is because the finer yarns involve so much larger proportion of labor?

Mr. SANFORD. Yes, sir; and very costly machinery, too. These mills have had to be set back to making the coarse yarns, and they are not fitted up for it at all.

The CHAIRMAN. That has driven the mills from fine yarns to coarse yarns?

Mr. SANFORD. Yes, sir; making a strong competition for the market in the coarse yarn business, too.

Mr. PAYNE. I see there are no provisos in paragraphs 251 and 252; are those satisfactory?

Mr. SANFORD. Just read that, please.

Mr. PAYNE. "Paragraph 251. Spool thread cotton, containing on each spool"—

Mr. SANFORD. In regard to that question, I say we do not have anything to do with thread. We confine ourselves to cotton yarns.

Mr. PAYNE. You confine yourself to yarns under paragraph 250?

Mr. SANFORD. Yes, sir. The cotton thread people will take up that question.

Mr. PAYNE. I see the importations were very small for 1895 as compared with 1893.

Mr. SANFORD. That was thread, I think.

Mr. PAYNE. What do you say in regard to the importation under that paragraph for 1896?

Mr. SANFORD. We would say, in answer to that question, that the importation of cotton yarns for the year 1896—if you would like to have the statistics we have them right here.

Mr. PAYNE. Have you those statistics in your statement which you wish to submit?

Mr. SANFORD. Yes, sir. They are compiled from 1894 to 1896, inclusive.

Mr. WHEELER. Will you explain why it has fallen off so greatly? This statement shows that in 1893 the imports were 92,000 and in 1895 9,000 pounds.

Mr. SANFORD. That does not apply to us. What number is that?

Mr. WHEELER. This is the 25 cents per pound.

Mr. SANFORD. I think you have got some wrong statistics there. I can not understand that. I would just like to say here that in the year 1894 the importation of cotton yarns was 747,838 pounds; in 1895, 1,784,854 pounds, and in 1896 the imports of cotton yarn reached a total of 2,431,855 pounds.

Mr. WHEELER. That is of all kinds; but here is a schedule of one of the grades.

Mr. SANFORD. I could not explain that. I do not know what number of yarn is referred to.

Mr. PAYNE. The classification is entirely different in 1894 from what it was in 1890.

The CHAIRMAN. That arises from the fact that in the fiscal year 1895 we were three months under the tariff of 1890 and nine months under the tariff of 1893.

Mr. SANFORD. The increase in yarns was simply enormous in 1896, and then again you must not forget the values are nearly 25 per cent lower than the year previous. Here is the amount of 2,431,855 pounds with a value of \$872,000 in 1896, and during that time our mills were shut down part of the time waiting for business and our employees were out on the streets. We give in this table the importations for six months in 1896, giving the numbers of yarn imported.

The CHAIRMAN. We have the same thing here.

Mr. WHEELER. I would like to ask one question. In Mr. Blaine's cotton goods report of the world, which, of course, you have read, the statement is made there that all coarse cotton goods can be made cheaper in America than anywhere else. Is that your experience?

Mr. SANFORD. I should think they could be made just about as cheap—say the coarse grades from 10 to 20—can be made in the South as cheap as anywhere else, but not as cheap in our section of the country. The labor is very much higher per day with us. They have longer hours in the South than we do, and it does not require the skill in that coarse work that we put in the finer work. These men have been devoting their attention for a good many years to the building up on the finer grades. You take a coarse fabric and it does not require a great deal of skill to put it together. It is simply the product thrown together. We have put a great deal of capital in these fine mills.

Mr. McMILLIN. Have you any statistics concerning the exportation of cotton not in bale form?

Mr. SANFORD. That would come more particularly under cloth. There is no yarn exported, not to any extent. There have been some attempts, for we have had inquiries from commission men asking what we thought of trying to export a few yarns to Turkey or South America, but we found it was impossible to do any business in those sections; that is, the competition was a little too severe for us. That may come around, but it has not come yet. But you take piece-woven goods, and they are sent over in quite large quantities. This information you would get from the cloth manufacturers.

Mr. McMILLIN. Is there any loss in the processes of preparing cotton for the mill by reason of the fact that it has been baled or compressed, as against cotton that is manufactured directly from the field without baling or compressing?

Mr. SANFORD. There has been considerable said in that respect by manufacturers. Some say they would rather have unpressed cotton than a pressed bale. I think myself there is a little advantage, but not very much.

Mr. McMILLIN. Is there any cost attached to the method of separating so as to get it in the form it was before it was baled?

Mr. SANFORD. Any difference in the cost, you say?

Mr. McMILLIN. Is there any cost attached to that? Does it require separate machinery?

Mr. SANFORD. No; it does not require any separate machinery. You take the unpressed bale and the pressed bale and you put it through the same machinery. That is, we would simply open the compressed bale and let it lie and air out a little while there for two or three days when it will work better; whereas if you take the uncompressed bale

you can shove it into the machinery right off, but you can not get out any more product. The advantage is that the storage and transportation, of course, are in favor of the compressed bale, and I do not think it would make any difference in the cost of the product.

Mr. WHEELER. The reports show some \$380,000,000 of cotton goods is exported by England. How much of that do you say is of this character which you state can be made cheaper in this country?

Mr. SANFORD. I did not make that statement that it can be made cheaper in this country.

Mr. WHEELER. Well, some do?

Mr. SANFORD. Some say so, but I do not say it. I say there are some goods that might be made as cheaply as these coarse goods made in England and some other points, but I do not say they can be made cheaper.

Mr. WHEELER. What proportion of the \$380,000,000 would you say was of the coarse character of the goods?

Mr. SANFORD. You ask a question I could not very well answer.

Mr. WHEELER. You can give a rough idea?

Mr. SANFORD. No, sir; I could not. I could not say in regard to that. Somebody here might do that. Have you those figures, Mr. Chase?

Mr. CHASE. No, not tabulated; but I have a general idea about it, that is all.

Mr. RUSSELL. You can manufacture as cheaply here as in England?

Mr. SANFORD. Some manufacturers of cotton claim they can manufacture these coarse goods as cheaply as they can abroad.

Mr. RUSSELL. To say nothing about the cost of the transportation of the cotton?

Mr. SANFORD. I meant they can make as cheaply at the mill as abroad. If you are manufacturing, say, in Georgia, and you are making sheeting requiring about No. 10 yarn, I think possibly with your long hours and cheap labor you could make them at about the same cost as in England.

The CHAIRMAN. You refer to the coarse goods?

Mr. SANFORD. To the very coarse goods. I do not make the statement, but I say it is claimed by some manufacturers they can.

Mr. McMILLIN. Are there any climatic reasons why the finer grades of goods can not be made there when they have the capital to construct the machinery?

Mr. SANFORD. In the South?

Mr. McMILLIN. Yes, sir.

Mr. SANFORD. Yes, sir; I think there are localities in the South where the climate is all right.

Mr. McMILLIN. As to the class of goods which is manufactured here, from your observation would you conclude that England or any other country can compete successfully in the markets which they supply here with the factories which are run by water in a genial climate where the cotton fields are and the cost of all transportation is saved, or even one transportation saved?

Mr. SANFORD. I think, sir, it is pretty even as conditions exist to-day. I do not think the English manufacturer would come over here and try to supply the coarse cotton goods.

The CHAIRMAN. You mean even as to the coarse goods, but when you come to the finer——

Mr. SANFORD. I confine myself to the coarse goods. When you make the fine goods, that requires experience and skill which it takes years to get.

Mr. McMILLIN. I believe it is the history of cotton manufacture that the coarse goods go as an advance guard of the other?

Mr. SANFORD. We recognize the South as a competitor of ours perhaps for the finer fabrics at some day, but it will take time to get there. We have been a great many years getting to where we are.

Mr. McMILLIN. It takes very expensive machinery?

Mr. SANFORD. Yes, very expensive machinery, and very skilled labor, and your people, that is the Southern people, have to get that experience the same way we have, and it takes time to get it.

WESTBROOK, ME., *December 24, 1896.*

COMMITTEE ON WAYS AND MEANS:

Allow me to call your attention to what appears to me a great detriment in the Wilson bill to the yarn manufacturers. The Yarn Spinners' Association was never satisfied with the present Wilson-Gorman cotton-yarn schedule. It was the best they could get after much hard work. They took the same under protest, and promptly, through their president, filed a protest with Senator Aldrich, of Rhode Island. The following clauses, "On yarns valued at 25 cents per pound or under, duty can not exceed 8 cents per pound," and "on yarns valued at over 25 cents per pound and not exceeding 40 cents per pound, duty can not exceed 15 cents per pound," and "on yarns valued at more than 40 cents per pound, duty is 45 per cent ad valorem," have led to a great deal of undervaluation. They have proved quite a temptation and stumbling-block to the importers and have led them to put a low value on yarns.

The large mills in Fall River and New Bedford on this account have been driven largely from the fine numbers above No. 60, and have made coarse yarns, producing nearly double the amount of coarse yarn they could produce of fine yarn. This increase of pounds by the fine mills has ruined the business for coarse mills like mine, and I hope the three clauses referred to may be stricken out of the Wilson bill. I trust also that the manufacturers of knit goods will be well protected, for if they are and run it will make a large demand for yarn.

W. K. DANA, *Treasurer Dana Warp Mills.*

## SPOOL COTTON.

(Paragraph 251.)

NEW YORK, *January 8, 1897.*

COMMITTEE ON WAYS AND MEANS:

We inclose herewith our views of what the schedule on spool cotton and kindred articles should be in the proposed tariff. A large majority (in point of business done) of the spool-cotton trade of the United States has joined us in signing this statement.

Spool thread of cotton, crochet thread of cotton, darning thread of cotton, marking thread of cotton, and embroidery thread of cotton, whether on spools, balls, cards, bobbins, tubes or cones, not exceeding one hundred yards of thread, six cents per dozen; exceeding one hundred yards on each spool, ball, card, bobbin, tube or cone, for every additional one hundred yards of thread, or fractional part thereof in excess of one hundred yards, six cents per dozen.

In regard to the duties on cotton yarns, the matter of a revision of the present ad valorem tariff to specific rates has been thoroughly and carefully considered by the cotton-yarn spinners, and the moderate and scientifically constructed schedule, which will be presented to your honorable committee by the cotton-yarn spinners, has our unanimous approval and cordial indorsement.

The Coats Thread Co., Theodore Frelinghuysen, Treasurer;  
The Clark Thread Co., R. B. Symington, Secretary;  
The Merrick Thread Co., L. R. Hopkins, President;  
The Kerr Thread Co., Fall River, Mass., I. C. Davis, Secretary;  
The Clark Mile-End Spool Cotton Co., James Valentine, Secretary;  
Jas. Chadwick & Bro., Ltd., M. Grierson, General Agent.

## COTTON CLOTH.

(Paragraphs 252-257.)

TUESDAY, *December 29, 1896.*

## STATEMENT OF MR. S. B. CHASE, OF FALL RIVER, MASS.

Mr. CHASE said:

Mr. Chairman and gentlemen of the committee, I wish to say that I have prepared a short statement here similar, I presume, to the one Mr. Sanford has offered, understanding that the committee's time is limited and they do not wish to hear long-drawn-out arguments. I will just say, however, the cotton-cloth people are not asking for any increased duties. We realize, so far as the doctrine of protection is concerned, we are not what we would consider sufficiently protected on the fine end of our business, but we think the schedule as arranged under the last tariff was in the right direction, as far as making a new classification and making a designation for what we call coarse and fine yarns; and while it does not quite protect us in the fine yarns, we do not ask for any increase. We do ask, however, for two or three amendments which bring in certain classes under specific duties already existing, taking them out of the ad valorem category, as we are fully persuaded that abuses have crept in under that system and goods are brought in as they should not be under the law. I am quite willing to read what we ask for, if the committee desire, or hand it in in writing.

Mr. PAYNE. Is it your desire to strike out that proviso at the end of the clause?

Mr. CHASE. We ask for one additional paragraph or section, or whatever it may be called, in the bill, making a further classification in the fine counts. Under the present law the counts are scheduled up to 200 threads to the square inch, and the last schedule provides for all goods exceeding 200 threads. We ask a further classification in that clause, and we should ask that exceeding 200 but not exceeding 300 threads be made at the same rate of duty as now exists in that clause, and then we ask for a further section defining the goods from 300 threads to the square inch and upward, with corresponding duties of what they are in other schedules. That is all we ask in that direction. Then we ask that goods known as lapit weaves (a new product in this country—a figure weave of that kind where the plain cloth has a woven pattern or design in its surface or embroidery) shall be subject to specific duties, and we ask for 50 per cent additional to the present specific duties on plain cloths for this embroidery or figure weave that is put on the cloth.

The lapits are put on the cloth in the process of weaving. A loom has been invented where needles do this work, which is a step in advance of any former process of weaving, so far as this country is concerned. It has been done abroad to a certain extent, and machines have been recently brought out in this country, and we are making a weave of cloth with a great variety of patterns in that way. It adds about double the value to the fabric and therefore should be entitled to a higher rate than the present specific duty, otherwise there will be no protection whatever in the tariff law. We should like that provided for, and have asked that in our paper; that is, we have drawn a paragraph to guide the committee as to what we would like to have, and assume that they will give it due consideration.

Another item which we feel should be corrected is what we consider a clear evasion of the law now on the part of the handkerchief manufacturers. There may be some handkerchief men here and I may be treading on their toes, but we have from very good authority that cloths or fine goods have been brought in from the other side stamped or marked off in simple lines of color or simple crossbars. The color will wash out, it is fugitive, and these are brought in as printed cotton handkerchiefs under an ad valorem duty which applies to cotton handkerchiefs. Now, they are immediately sent to the bleacheries and the material is washed and they can be used for any purpose whatever, handkerchiefs or otherwise, and of course it opens the door for a rank undervaluation, and large importations which have been made of piece cotton goods in the last two years have been largely, I have been told, of that character, where it has appeared an evasion of what we consider was, at any rate, the intent of the present law.

The CHAIRMAN. And a fraud on the revenue?

Mr. CHASE. Yes, sir; of course. These are the things we ask for. It is not very much, but the one we lay special emphasis on is the last one I mentioned.

Mr. McMILLIN. Have you the section of the law to which your amendment would apply so we could find it here?

Mr. CHASE. Yes, sir; I could tell you. I have it right here in my pocket. We wish an amendment of paragraph 256 of Schedule I, where it says "exceeding 200 threads." We ask to have that to read, somewhat as follows: "Exceeding 200 threads but not exceeding 300 threads."

The CHAIRMAN. You propose to introduce a new classification?

Mr. CHASE. Yes, sir; then we ask to have that followed by a further paragraph which takes up above 300 threads with a duty which will correspond according to the value of the goods that is already existing in this and other sections.

Mr. McMILLIN. The present rate of duty on that is 35 per cent ad valorem?

Mr. CHASE. Yes, sir; we have not called attention to that. That is an obvious error, that 35 per cent. If you notice, the goods of lower value in the preceding section are assessed under the present law at 40 per cent.

Mr. McMILLIN. They are assessed specifically?

Mr. CHASE. No; as far as the ad valorem feature goes it only applies to—

Mr. McMILLIN. Here is one on the preceding page, and I see there are three at 45 per cent?

Mr. CHASE. If you will look over the whole schedule there you will find in the lower counts, what we call the cheaper class of goods, the ad valorem begins with 25 per cent, and it is built up from 25, 35, and 40, if my memory serves me correct, without looking back here. Now, next to the last section, which represents a lower quality of goods than the last section does, it is assessed at 40 per cent, while paragraph 256, representing a higher class of fabrics, is assessed at 35 per cent, which is an obvious error. I may say I am perhaps sure of my ground in this case because I was present here in Washington when this bill was drawn and saw it all through the different stages, and I know the intent was meant to be 40 per cent in these last two paragraphs, and it is obvious to the mind of any man who investigates it that it would be absurd to assess a lower section 40 per cent and a higher one 35 per cent. The tariff is supposed to work in a contrary direction.

Mr. McMILLIN. I understand by means of this new invention or new method of weaving there is added double value to the cloth?

Mr. CHASE. I say it frequently does that. It may be 25, 50, 100, or even 150 per cent.

Mr. McMILLIN. The ad valorem feature would catch that additional value?

Mr. CHASE. No, sir; I do not think the ad valorem catches anything in the custom-house.

Mr. McMILLIN. It catches "Hail Columbia" sometimes.

Mr. CHASE. It will catch something, but it will not catch what it ought to.

Mr. McMILLIN. In that grade of goods which we are discussing, now, suppose you were to buy \$100,000 worth of cotton and go and put it into a finished form, what would it cost to put it into the finished form, according to your experience?

Mr. CHASE. It depends somewhat upon the fabric. In the mills which I personally represent the raw material varies from, well, say 60 per cent of the cost of the fabric to 20 per cent. We make fabric of raw material of which the raw material will not be over 20 per cent, and the other 80 per cent would be made up mostly of labor, taxation, and other minor items of material and labor. It depends altogether upon the fineness of the fabric, and the finer you go the less the raw material costs. They are light weaves with a great deal of labor on it and that is the principle involved in this very bill adopted last session, to assess the cost of the higher counts of fine yarns more tariff than you put on the coarse yarns.

Mr. McMILLIN. Then when you put the raw material that is free into the finished commodity the competing tax or import duty attaches not alone to the labor cost and the tax cost, but also to the material, and you get the benefit of that?

Mr. CHASE. Yes, sir; whatever tax there is applies to the whole fabric.

Mr. EVANS. How much imported raw material is there in that cloth fabric of which you speak?

Mr. CHASE. I beg pardon, I did not catch that question?

Mr. EVANS. How much imported raw material is there in this fabric, in this product?

Mr. CHASE. Very little.

Mr. McMILLIN. I see of this grade of goods we have mentioned there was imported in the year 1896 only \$174,000, which shows a falling off from 1895 of \$8,000?

Mr. CHASE. I do not know what class of goods that refers to.

Mr. McMILLIN. The class we have just mentioned, exceeding 200 threads to the square inch?

Mr. CHASE. One thing must be borne in mind by the committee in regard to 1896, that the imports of everything coming into this country has shown a great falling off from the fact that the consumption of the people has been very light. It has been very hard times and not only have the imports fallen off, but the domestic manufactures have fallen off tremendously.

Mr. McMILLIN. There is a very considerable falling off in most of these?

Mr. CHASE. In 1895, however, there was a large increase in imports of dry goods, an overwhelming increase, in fact.

Mr. McMILLIN. If the present tariff rates on these things are too low, how is it you account for the falling off; do you account for that falling off by decreased consumption?

Mr. CHASE. There was a large increase in 1895, you will find, in general dry goods, but I can not say under what section, as I have not investigated that question to that extent. As a rule the imports of cottons and all kinds of textile fabrics was immense in 1895. It was very large, and necessarily the imports had to drop in 1896 because there was an oversupply brought in, and the domestic manufacturers suffered.

Mr. McMILLIN. You say you were present when the schedule was framed?

Mr. CHASE. Yes, sir.

Mr. McMILLIN. Was it satisfactory to you?

Mr. CHASE. No, sir; it was not satisfactory, but it was the best we could get.

Mr. McMILLIN. But there was a slip up in this section, or a mistake?

Mr. CHASE. This 35 per cent is evidently an error. I think that is obvious to anyone, and I do not think that needs any argument. We saw it after the law was printed, but it was too late to rectify it.

Mr. WHEELER. You stated an ad valorem duty on this character of cloths did not operate effectively in the custom-house, I think?

Mr. CHASE. Where we ask for the application of a specific system instead of an ad valorem?

Mr. WHEELER. What I want to ask was this: We see a great many of these schedules are specific duties, and where a specific duty is laid down the equivalent ad valorem does not average more than 35 or 40 per cent.

Mr. CHASE. Exactly.

Mr. WHEELER. Why does that specific duty operate better than the ad valorem duty?

Mr. CHASE. Why, for the reason that we know that is the fact, and while nobody can ascertain it, we suppose it is because the goods coming in under the ad valorem system are undervalued. The percentage is calculated all right, but it is a percentage on a low price. For instance, goods are worth 10 cents a yard in England and the invoice is 6 cents, and they pay a duty of 40 per cent a yard, and there you only pay a duty of 2.4 cents. It is obvious how it works, and we know a great many foreign houses have their branches in this country and the goods are consigned to these branches and the price is made here directly on the sale of the goods. There is no method by which competing manufacturers can go into that custom-house and ferret out these things. We have to trust to the Government, but we know in certain cases it is done. Of course, you all know occasionally, once in a while, a man is pulled up and fined for it and the fine collected.

Mr. WHEELER. I want to get some information on this point. The South is intensely interested in trying to manufacture cotton goods, and it produces more than three-fourths of the cotton of the world, and we recognize that to increase the manufacture is the great object we have in view, and what the South wants is to prevent if possible any change in the tariff which will militate against their foreign market.

Mr. CHASE. I do not blame them for that.

Mr. WHEELER. Can you suggest anything as to how the tariff will affect that question?

Mr. CHASE. I do not see that this tariff affects that in any way. The export business of the South has largely increased with China, and it is in goods of which in fact almost all the cost you may say is in the raw material. The labor does not cut any figure, and when it comes to the percentage they are able to compete to a certain extent

with Great Britain and other countries in that class of goods. In the finer fabrics we rarely export anything, except we may get a unique design sometimes which might find a market in foreign countries owing to its style rather than to its intrinsic value.

Mr. WHEELER. The statement is made that the manufacture of these coarse cloths in the South can be done at about two-thirds of the cost in Manchester, do you think that is so?

Mr. CHASE. I do not believe it; no, sir; I do not. I do not think it is possible for it to be so. You would be making great strides in the South, greater than you are, and Manchester would have lost its trade rapidly. Two-thirds is an enormous difference and would drive their men out of business pretty quick. I do not doubt the people who make that statement are perfectly honest, and possibly they may be right, but personally I do not believe it is so, from what I understand.

Mr. McMILLIN. Why were a part of these rates fixed at ad valorem and a part specific in the framing of this schedule in the Senate?

Mr. CHASE. That has always been done under every tariff bill that has ever been made, and for this reason: That it is impossible, or rather impracticable, to stretch the schedule out a mile long. You do not want any more detail, and the Treasury Department does not, than it is necessary to have. It only confuses and makes things complex in the custom-house, but when goods rise above a certain value as values are fixed here where the ad valorem applies, the quantity is so small in either country that it is not worth while to keep stretching out the schedule. We are attempting to do that to a certain extent by offering for your consideration to-day one additional paragraph in the law based on still higher counts, but in the different sections themselves, if a certain class of goods valued at over and above the price at which the specific duties would naturally apply even upon an ad valorem, it is a great deal more convenient all around to apply the ad valorem.

Mr. McMILLIN. Is not this the tendency of a specific rate of duty, that where different grades of goods, some of higher and some of lower value apply, are in the same section under the same rates, that the effect of the specific rate is to put a higher per cent of duty on the coarser goods or less valuable articles than on the higher?

Mr. CHASE. That is true, sir, undoubtedly.

Mr. McMILLIN. Then the tendency of the specific rate is, where there are a number of articles in the same schedule differing in value, to put the higher rate on the lower goods?

Mr. CHASE. Yes, sir; and the lower rate on the finer as well.

Mr. McMILLIN. Is not this a further result from it. First, I will ask if the tendency in the manufacture of cotton has not been to very rapidly cheapen the commodity?

Mr. CHASE. I think it has.

Mr. McMILLIN. By processes of modern invention?

Mr. CHASE. I think it has, sir; there is no question about that.

Mr. McMILLIN. Now, where the tariff law has run for a series of years does it not tend to prevent the consumer from obtaining as rapidly as he would otherwise the benefit of the cheapening process?

Mr. CHASE. No, sir; I think not, for the reason that as rapidly as processes of manufacture are cheapened, the competition, no matter if you had a prohibitory tariff—allowed you had the Chinese wall talked about to keep out all the imports—the domestic competition is so fierce on this side that the consumer gets the goods at the lowset possible point of production.

Mr. McMILLIN. That is not so in all things?

Mr. CHASE. I think it is, unless it is controlled by some artificial combination.

Mr. McMILLIN. But do not these artificial combinations exist in many lines of industry?

Mr. CHASE. I know there are such things as trusts, but it does not apply to us, however.

Mr. McMILLIN. There are such cases, and they are not at all infrequent in the United States?

Mr. CHASE. I understand so.

Mr. McMILLIN. And in things which are protected by import duties?

Mr. CHASE. That I do not know so much about.

Mr. McMILLIN. Do you not think it is so?

Mr. CHASE. Well, I think it is; yes, sir.

Mr. RUSSELL. On that class of goods of which you speak is it not a fact, by the construction of the present law, either by rule of the appraisers or otherwise, they simply count the number of threads in assessing the duty and no account has been taken of the extra work put upon it, but the duty has simply been assessed upon the threads in the cloth?

Mr. CHASE. Yes, sir.

Mr. RUSSELL. That is the only reason why you suggest the special paragraph should apply to that class of goods?

Mr. CHASE. Yes.

Mr. RUSSELL. It is really a new manufacture that this company developed within the last three or four years?

Mr. CHASE. Yes, sir. There was, I will not say in the McKinley bill or the bill previous, but under the old Morrill tariff there was a provision for embroidery, but that has been dropped out for some reason or other, and now we ask that these figured goods be included.

The CHAIRMAN. It is in the act of 1890, but dropped out in the act of 1894.

Mr. CHASE. I wish it distinctly understood that we do not stand in the position that we have asked for any material or radical rise in the rates of duties. In fact, we have asked for no raise as the schedule stands, but we ask for corrections which obviate certain inequalities.

Mr. RUSSELL. You are speaking of yarns?

Mr. CHASE. We have nothing to do with the yarns. I think they have suffered more than we have in regard to legislation. I think they had an unfortunate scheme to contend with. We make our own yarns, to be sure, but we weave them.

The CHAIRMAN. Do you import any yarns?

Mr. CHASE. Yes, sir; I have imported some—quite a lot in 1895.

The CHAIRMAN. Do you find certain fine yarns could be imported under the present duties as they exist as cheaply as they can be made here?

Mr. CHASE. We were obliged to import them on account of the price. No domestic man was willing to sell at such a price.

Mr. RUSSELL. Have you imported any roving?

Mr. CHASE. No, sir.

Mr. WHEELER. Do you know anybody here present connected with mills which have branches in the South?

Mr. CHASE. No, sir; I think there is only one cotton cloth manufacturer here with whom I am acquainted, and he is not connected, I believe, with a Southern mill, as far as my knowledge goes.

Mr. WHEELER. How do you account for the fact that England now

exports nearly \$400,000,000 of cotton goods, whereas the United States only exports about \$10,000,000 or \$12,000,000?

Mr. CHASE. You want me to express why I think it is so?

Mr. WHEELER. Yes.

Mr. CHASE. In the first place we do not have the market; that is a disadvantage, and she makes her goods undoubtedly a great deal cheaper than we do here.

The CHAIRMAN. Why is she able to make them cheaper?

Mr. CHASE. There are two very large items I would be very glad to furnish figures on at any time. The principal one, of course, is labor.

The CHAIRMAN. Which is higher here?

Mr. CHASE. Yes, sir; and another very large item, which I have never seen anybody make a great deal of, is this: In large communities like Fall River, Lawrence, etc., a very large item is the question of local taxation. Now, the mill I represent pays in the neighborhood of \$24,000 or \$25,000 a year, say about \$24,000 a year. That same plant all complete in Great Britain would not pay, according to information which I have of several plants there, exceeding about \$3,000 to the community in which it was located.

The CHAIRMAN. In other words Great Britain by her system favors her industries and manufacturing interests in taxation and puts the taxation upon—

Mr. CHASE. They assess the householders in a great variety of things and they have a great variety of rates. An individual living in a city the size of Fall River pays water rates, poor rates, school rates, and a variety of other rates too numerous to remember. In other words, it comes out of the man's wages; he not only gets low wages to start with, but the householder and the man who rents the house as a rule (and I am informed of this by very good authority), as a rule the householder, the man who owns or rents the house, pays one-third of the rent in rates; that is, his rent is reduced by one-third by the rate he has to pay the town or community in which he lives. With us, of course, it varies some, but with us, and I presume it is practically so all over New England, we pay everything in taxes, and whatever the laboring man gets he gets—he has no taxes to pay except the poll tax of \$2 a year, and most of them manage to evade that.

Mr. WHEELER. I wish you would tell your mill people to come South and we will not tax them at all?

Mr. CHASE. That is worthy of their consideration.

Mr. JOHNSON. And I suppose they get a cheaper rate on the capital invested?

Mr. CHASE. That is not so large a factor as it was before. Interest is getting cheaper. Capital is a great deal cheaper than it has been before, but I suppose the difference is from 1 to 2 per cent.

Mr. JOHNSON. That is, it is 1 or 2 per cent less than it is here?

Mr. CHASE. Yes; but of course if you go West or South it is higher than it is in the East.

Mr. McMILLIN. Is not our labor more efficient than theirs?

Mr. CHASE. I do not think it is.

Mr. McMILLIN. I have seen statistics prepared by the Labor Bureau which were decidedly in that direction.

Mr. CHASE. There is only one department in the manufacture of cotton goods where I think our labor is really a little more efficient, and that is in the weaving. The tendency in this country is to run more looms to the weaver than in England, and that is true in no other

department as far as I know. In the milling room in England they run more per capita than we do, and in the mule spinning decidedly so. They run a pair of mules over there containing as high as 2,800 spindles, and the longest I know of at Fall River is about 1,600. Perhaps there may be a few longer than that, but I do not know. It is true the per capita of the product of Great Britain, barring weaving, to the best of my knowledge and belief, is larger than the United States.

Mr. McMILLIN. Could you give an estimate of the percentage?

Mr. CHASE. No, sir; I only know that in a general way.

Mr. McMILLIN. How do you account for the fact our labor is less efficient when we have boasted that they are more intelligent?

Mr. CHASE. I do not think our labor is less efficient.

Mr. McMILLIN. That is not the question I asked.

Mr. PAYNE. You asked if the labor was more efficient.

Mr. McMILLIN. He stated that it was less efficient in all except one department, and now I ask why it was less efficient if we have more intelligent labor. I am asking his grounds for it now.

Mr. CHASE. I will explain just what I meant by that, and make it clear to you. What has been true of Great Britain is also true of this country, and I suppose more or less in other countries. There has been a constant progress in producing more per capita. That is to say—you know what a pair of mules are, I do not mean Southern mules, but spinning mules, carrying spindles?

Mr. McMILLIN. We have mills in the South.

Mr. CHASE. It is a long machine extending across the mill with a great many hundred spindles. Now, I am not very old, but when I first went into the mill I do not think that the mill at Fall River had over 1,200 spindles to a pair of mules. Now, I do not think a pair in Fall River has as few as 1,200, but they run up to 1,400, 1,600, and perhaps to 1,800, and I do not know what they are going to do. That same thing occurs in Great Britain, only it occurred sooner than with us. They have gone as high as 2,800 to the pair. That is what I meant by the labor being more efficient than in certain cases of labor turning more machinery than here. That is what I meant by efficiency. I think our spinners are as bright and as smart as theirs, because most of them come from there and do the same work in our mill as they did there.

Mr. McMILLIN. You have free trade in labor but tax the labor's product?

Mr. WHEELER. In regard to the statement about labor being higher, there are three reports submitted to Congress, one by Secretary Frelinghuysen, one by Secretary Evarts, and one by Secretary Blaine, and all three of those reports state that in many of the cotton industries in England the pay of the labor is higher than anywhere else in the world—higher than that in America. Do you think that is correct?

Mr. McMILLIN. For the unit of product?

Mr. WHEELER. No; actually by hours.

Mr. CHASE. Those are high authorities, and of course it is rather unbecoming to me to say it is incorrect.

The CHAIRMAN. I think you had better take with some allowance whether there are authorities of just that kind.

Mr. WHEELER. Mr. Blaine has stated that labor wages are higher in Great Britain than here.

Mr. CHASE. I have great respect for the authorities quoted, but I do not believe it is true.

Mr. WHEELER. I copied them off in a speech in 1888 and I was looking for that. I had the pages of the report.

Mr. CHASE. As a matter of fact, I had, and I left here with the committee of the last House the time I was here in the hearings before, a detailed list of representative English mills, giving the prices paid to each hand in the mill, beginning with the first process, and going clear through to the last. I gave that in comparison with our own mills, and there is no question whatever in my mind. I have never been in England in my life, and consequently if I was put upon the stand as witnesses are in court and sworn to give just what I knew and nothing else, perhaps I could not swear to anything—but if you trust to others; to men I sent over there from my own mill—and from information that has come in a sure way, I know that fact is not true. I know the wages of the United States and the earnings of the people are absolutely higher just as well as I know any fact I have not seen with my own eyes. I have not seen their pay rolls.

PREPARED STATEMENT SUBMITTED BY MR. CHASE.

COMMITTEE ON WAYS AND MEANS:

The cotton manufacturers of Fall River and New Bedford, representing about 4,000,000 spindles, and the Arkwright Club of Boston, representing the cotton manufacturers of New England, whom I have the honor to represent, beg leave to submit for the consideration of your committee that certain additions to the cotton schedule of the customs laws of 1894 are necessary for the welfare of that industry in the United States, namely:

Amend section or paragraph 256, Schedule I, of the customs laws of 1894, by inserting in line 2 thereof, after the words "two hundred," the words "and not exceeding three hundred." And further amend by crossing out the words "thirty-five" where they occur in the last line of the same section and inserting in place thereof the word "forty," so that said section shall read, as amended, as follows:

"Cotton cloth not bleached, dyed, colored, stained, painted, or printed, exceeding two hundred and not exceeding three hundred threads to the square inch, counting the warp and filling (1), and not exceeding two and one-half square yards to the pound, three and one-half cents per square yard; exceeding three and one-half and not exceeding five square yards to the pound, four cents per square yard; exceeding five square yards to the pound, four and one-half cents per square yard, if bleached (2), and not exceeding two and one-half square yards to the pound, four cents per square yard; exceeding two and one-half and not exceeding three and one-half square yards to the pound, four and one-half cents to the square yard; exceeding three and one-half and not exceeding five square yards to the pound, five cents per square yard; exceeding five square yards to the pound, five and one-half cents per square yard; if dyed, colored, painted, or printed (3), and not exceeding three and one-half square yards to the pound, five and three-fourths cents per square yard; exceeding three and one-half square yards to the pound, six and one-half cents per square yard: *Provided*, That on all such cotton cloths not bleached, dyed, colored, painted, stained, or printed (4), valued at over twelve cents per square yard, bleached (5), valued at over fourteen cents per square yard, and dyed, colored, stained, painted, or printed (6), valued at over sixteen cents per square yard, there shall be levied, collected, and paid a duty of forty per centum ad valorem."

Further amend Schedule I by adding a new section, as follows, viz: "Cotton cloth not bleached, dyed, colored, stained, painted, or printed, exceeding three hundred threads to the square inch, counting the warp and filling (1), and not exceeding two square yards to the pound, four cents per square yard; exceeding two and not exceeding three square yards to the pound, four and one-half cents per square yard; exceeding three and not exceeding four square yards to the pound, five cents per square yard, exceeding four square yards to the pound, five and one-half cents per square yard; if bleached and not exceeding two square yards to the pound, five cents per square yard; exceeding two and not exceeding three square yards to the pound, five and one-half cents per square yard; exceeding three and not exceeding four square yards to the pound, six cents per square yard; exceeding four square yards to the pound, six and one-half cents per square yard; if dyed, colored, painted, or printed, and not exceeding three square yards to the pound, eight cents per square yard: *Provided*, That all such cotton cloths not bleached, dyed, colored, stained, painted, or printed, valued at over fourteen cents per square yard, bleached, valued at over sixteen cents per square yard, and dyed, colored, stained, painted, or printed valued

at over twenty cents per square yard, there shall be levied, collected, and paid, a duty of forty per centum ad valorem."

Further amend Schedule I by adding a new section, as follows, viz: "Cotton cloth designed for handkerchiefs, whether by printing, stamping, cutting into squares or otherwise, but not hemmed and finished for the market, shall be held to be subject to the same duty imposed upon cloth or piece goods of the same count and weight. And cotton cloth whether or not containing a mixture of silk, linen, wool, tinsel, ramie, or other material upon the surface of which is woven or embroidered any design, figure, or pattern, shall be subject to a duty of fifty per centum additional to the duty imposed by this act upon plain cotton cloths or fabrics of the same count and weight."

The reason for urging the above changes and amendments are, in brief, as follows:

The duties on the finer counts and weights are not adequate or in proportion to the duties upon the coarser counts. Amendment No. 1 is designed to remedy this in part. Amendment No. 2 in the same section corrects an obvious error and makes the section in accord and harmony with previous sections.

Amendment No. 3 is rendered necessary by the adoption of amendment No. 1, and merely brings the rate of duty on those counts into harmony with the duties imposed on the lesser counts.

Amendment No. 4 is designed to protect the manufacturers of cotton goods from a deliberate evasion of duties made possible by a ruling of the Treasury Department. This amendment is of special importance.

Under the provision providing for a duty of 40 per cent upon importations of cotton handkerchiefs, ordinary cotton cloth in the piece has been stamped into squares with a fugitive color easily and cheaply erased by washing or bleaching, and imported not as cotton cloth, but as handkerchiefs, thus evading the specific duty imposed upon cotton goods.

Amendment No. 4 further designs to impose a fair rate of duty upon a new manufacture of cotton goods which can readily be made in this country, the principal item of the cost of which is the labor, and which being a new manufacture is not provided for in the existing bill.

The value of the plain cotton fabric is very largely increased, often more than doubled, by the pattern embroidered or woven upon it, and the rate of duty should therefore be made to correspond with its increased value.

It will give me satisfaction to furnish any additional facts, figures, arguments, or statistics, your committee may desire.

Very respectfully, yours,

S. B. CHASE,  
*Fall River, Mass.*

### NEW CLASSIFICATION SUGGESTED.

ADAMS, MASS., *December 26, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

I make a few suggestions as to cotton cloth schedules. The Wilson bill is correct up to 100 threads to the square inch, but on goods over 100 threads but not exceeding 150 threads per square inch there should be an advance of one-half cent per square yard. On goods over 150 threads and not exceeding 200 threads per square inch there should be an advance of three-quarters of a cent per square yard, and on goods over 200 but not exceeding 250 threads per square inch there should be an advance of 1 cent per square yard, with the ad valorem duties in same proportions. Would suggest classification exceeding 250 threads to square inch with proportionate increase in duties as above. Wish ad valorem duties could be dispensed with and everything made specific.

Many goods are now being made 250 threads and over to the square inch of very fine yarns. Seventy per cent of the cost of our goods is in labor, and goods are now being imported in large quantities, at one-half cent per yard less than it costs us to make them. The bill, when accepted, will probably remain in force many years, and your committee are, of course, aware that competition is sure to come from India, Japan, China, and Russia within a few years.

W. B. PLUNKETT.

## CORSETS.

(Paragraph 258.)

## FAIRLY PROTECTED UNDER PRESENT TARIFF.

NEW YORK, *December 29, 1896.*

## COMMITTEE ON WAYS AND MEANS:

The undersigned, corset manufacturers, respectfully submit the following statement relative to the tariff on corsets and corset materials:

The tariffs of 1890 and 1894 include corsets under the general heading of Clothing, instead of giving them a separate classification, as had been done in previous tariffs. We would recommend that the present classification be continued, as there is no important reason for a separate classification.

The importations of corsets for 1890, the last full year in which they were reported under a separate classification, was \$968,129. The present importation is not given separately in the published reports, but it is believed to be somewhat smaller. Nearly all the corsets imported are of the finer grades, selling in the market at \$12 per dozen and above. These corsets are mostly made from either satteen or coutil, and pay a duty of 40 per cent. A few are made from Italian cloth (wool), and pay a duty of 50 per cent. The duty on the satteen and coutil is 35 per cent. In order to compete with foreign corsets the American manufacturer must import the satteen and coutil from which this grade of corsets is made. This is particularly true of coutil, which is manufactured from bleached yarns, as no cloth similar to this is made in this country.

Nearly all American corsets are trimmed with lace, all of which is imported, paying a duty of 50 per cent.

The corset industry is fairly protected under the present tariff, and we do not ask any increase in the rates on corsets, provided the rates remain as at present on cloths and lace. If, however, the rates on materials are advanced (which we trust will not be the case), we ask for a corresponding increase in the duties on corsets. The duty on lace is already 10 per cent higher than the duty on the garments on which it is chiefly used. We should be glad to see this duty lowered, but in no case should it be made higher, as it becomes a discriminating duty, not only against corsets, but against every species of wearing apparel on which it is used.

Y.; ——— & Co., 88 Leonard street, N. Y.; Chicago Corset Co., 402 Broadway, N. Y.; Princess of Wales Co., 568-74 Broadway, N. Y.; Heilner, Hertzog & Co., 406 Broadway, N. Y.; Roth & Goldschmidt; Jackson Corset Co., of Jackson, Mich.

## PRUDENT MANUFACTURERS HAVE PROSPERED.

NEW YORK, *December 28, 1896.*

## COMMITTEE ON WAYS AND MEANS:

The entire importations of corsets to the United States for the last five years has not averaged \$350,000 a year. The manufacture in the

United States and improvement of it has so vastly increased that the importation of only a few finer articles does not come into account at all. Even should the duty be reduced to-day to 20 per cent, it would scarcely increase the importation. Skilled labor in that particular branch in France and Belgium is as well paid as here. The proportion of home production to foreign importation is about 100 to 1. All the manufacturers that have managed their businesses prudently have been very prosperous.

Under the McKinley bill corsets made of wool paid an ad valorem and a specific duty on weight. Since the steel and bone free list, linings weigh a great deal more than the woolen material employed. The duty imposed is not justifiable, especially since the quantity imported is so insignificant that it would not pay for the extra labor of examination.

JOSEPH BECKEL & Co.,  
*Domestic Manufacturers and Importers.*

## HANDKERCHIEFS AND MUFFLERS.

[Paragraph 258.]

### SHOULD BE ENUMERATED IN A SEPARATE PARAGRAPH.

NEW YORK, *December 28, 1896*

#### COMMITTEE ON WAYS AND MEANS:

I beg to call your attention to the very large number of protests and suits under the McKinley and Wilson tariffs on the article of handkerchiefs. This was caused principally by classifying handkerchiefs among other goods not appropriate to them. In commerce there are many descriptions of handkerchiefs, viz, handkerchiefs and mufflers hemmed, hemstitched, imitation hemstitched, revered, embroidered, fancy open work, embroidered initial, lace edges or inserting, either white, colored or printed, in the piece or separate. All of the above are made of cotton, linen, or silk, or mixed. In addition, there are mufflers made of wool, in whole or in part—that is, wool mixed with linen, cotton, or silk.

Permit me to remark that contention would be avoided by making a subdivision in the schedules, in which handkerchiefs and mufflers only would be included. I refer, for illustration, to Schedules I, J, L, K, of the Wilson tariff, and respectfully suggest amendments to read as follows:

“Handkerchiefs and mufflers in the piece or separate, and made of vegetable fiber wholly, 40 per cent; handkerchiefs and mufflers in the piece or separate and made of animal fiber wholly or partly, 60 per cent; handkerchiefs and mufflers of which the chief value is lace, 60 per cent.”

This would include all descriptions of handkerchiefs and mufflers, and the rates of duty that I have named are on the equitable balance line—that is, they give ample protection to home manufacture, and will at the same time produce the largest revenue to the Government.

A specific duty where weight or the number of threads to the square inch would be the measure of dutiable value would not be appropriate for handkerchiefs or mufflers, because there is always a variation in count, even in a single handkerchief or muffler, and this would cause daily contention between importers and the Government.

J. FRANKLIN CAMERON.

**M'KINLEY RATES ASKED.**NEW YORK, *December 26, 1896.***COMMITTEE ON WAYS AND MEANS:**

We are large manufacturers of cotton handkerchiefs, employing thousands of hands in both of our factories—one at South River, N. J., and one at Lebanon, Pa. We would ask you to please place handkerchiefs in Schedule I, cotton manufactures, paragraph 258, at 50 per cent, as they were in the McKinley bill, and oblige.

HERRMANN, AUKAM &amp; Co.

**SPECIFIC DUTY SUGGESTED.**NEW YORK, *January 2, 1897.***COMMITTEE ON WAYS AND MEANS:**

As manufacturers of cotton handkerchiefs, representing an industry the proper development of which has been greatly hampered by various causes hereinafter mentioned, we beg to submit this paper for your favorable consideration. It must be conceded by all candid authorities on this subject that the present ad valorem duty of 40 per cent is wholly inadequate for the proper protection and preservation of this industry. The manufacturers of cotton cloth who supply handkerchief manufacturers with their raw material are protected under the present tariff law on many grades of cotton cloth by a specific duty equivalent to from 75 to 100 per cent ad valorem. It therefore follows that if the present duty on cotton cloth is essential, this fabric being the component material of chief value in cotton handkerchiefs, the latter should receive about the same measure of protection as cotton cloth.

The present ad valorem system permits of undervaluation, and we therefore suggest a specific duty of 25 cents per dozen on all cotton handkerchiefs. While this would no doubt reduce importation, it would, in our opinion, result in the collection of a larger revenue, would enable handkerchief manufacturers to increase their output, and thus employ many more persons at fair wages, and would give permanency to an industry which has suffered greatly from the present tariff.

PHILLIPS &amp; MEYER.

**COTTON VELVETS.**

(Paragraph 259.)

**THE ADVANTAGES OF SPECIFIC DUTIES OVER AD VALOREM.**MANCHESTER, ENGLAND, *December 19, 1896.***COMMITTEE ON WAYS AND MEANS:**

I venture to address you to show the advantage of a specific instead of an ad valorem duty on cotton velvets, etc.; they come under Schedule I, paragraph 259, in the existing tariff.

I am senior partner in the firm of J. Hallworth & Son, velveteen manufacturers at Manchester, England; my firm's production has a large sale in the United States, our business in the United States being exclusively the actual sale to importers of goods at prices per yard in Manchester, and on all business so conducted by us or other firms the full duty to which the goods are liable has to be paid by the importers, and if the entire business was one of actual purchase of goods by importers an ad valorem duty would not work unfairly. The experience gained in the conduct of our business has led me to the conclusion that a great many invoices of cotton velvets sent to the United States do

not represent actual sales and purchases, the goods being really consigned for sale on account of the manufacturers and nominally invoiced only, and below their actual value, so as to evade the full duty. I am aware that appraisers are appointed to examine all goods so as to check any systematic undervaluation, but I beg to point out that it is exceedingly difficult even for an expert to tell the exact value of cotton velvet except in the lower qualities, and an ordinary appraiser would find it not only difficult but impossible.

What I have mentioned describes a real state of things, and you will at once see that to assess the duty ad valorem on such invoice prices results in a loss of revenue to the United States Government and presses very unfairly on honest importers, and it is on these grounds solely that I advocate a specific in place of an ad valorem duty in any rearrangement of the tariff.

A strong objection to specific duties is that they mean in practice the imposition of a higher rate of duty on the lower qualities than on the better qualities. This was especially so under the McKinley tariff, which imposed a square-yard duty on this class of goods, but I venture to submit that if the duty was regulated solely or partly by the weight of the goods, the difference betwixt the percentage of duty on the various qualities, though pressing somewhat more heavily on the lower qualities, would be more nearly proportionate than was the case under a square-yard duty.

I append some calculations which will show the effect of a tariff arranged on the basis of duties being assessed on the weight of the goods and also partly on the weight with an ad valorem duty as well.

I may mention that the French tariff assesses the duty payable on this class of goods solely on the weight of the goods, as follows:

Velveteens, corduroys, and moleskins containing in the warp less than 26 threads in one centimeter:

Gray, 116 francs; dyed or printed, 165 francs per 100 kilos.

Velveteens, corduroys, and moleskins containing in the warp more than 26 threads in one centimeter:

Gray, 190 francs; dyed or printed, 370 francs per 100 kilos.

The German, Austrian, Russian, and Italian tariffs all assess the duty on cotton velvets by the weight.

Dyed cotton velvets, etc., under the present tariff pay a duty of  $47\frac{1}{2}$  per cent ad valorem.

The bulk of the dyed cotton velvets exported to the United States market is from 6d. to 10d. per yard for 22 inches, and for wider or narrower goods in proportion. I append calculations for 4 sorts beginning at  $5\frac{3}{4}$ d. per yard and up to  $13\frac{1}{2}$ d. per yard:

No. 1, 22 inches wide, 37 yards long, at  $5\frac{3}{4}$ d. per yard =  $17/8\frac{3}{4}$  = \$4.30; weight, 6 to  $6\frac{1}{2}$  pounds.

No. 2, 22 inches wide, 37 yards long, at  $7\frac{3}{4}$ d. per yard =  $23/10\frac{3}{4}$  = \$5.80; weight,  $7\frac{1}{2}$  to 8 pounds.

No. 3, 22 inches wide, 37 yards long, at 10d. per yard =  $30/10$  = \$7.49; weight, 9 to  $9\frac{1}{2}$  pounds.

No. 4, 22 inches wide, 37 yards long, at  $13\frac{1}{2}$ d. per yard =  $41/7\frac{1}{2}$  = \$10.11; weight,  $10\frac{1}{2}$  to 11 pounds.

Dyed velvets, etc., containing in one inch of the warp over 64 threads. (This would include all cotton velvets and fine corduroys).

Calculation showing the effect of a duty solely by the weight, at 37 cents per pound:

No. 1, say,  $6\frac{1}{2}$  pounds, at 37 cents per pound = \$2.31, or about 54 per cent on \$4.30.

No. 2, say,  $7\frac{3}{4}$  pounds, at 37 cents per pound = \$2.87, or about 49 $\frac{1}{2}$  per cent on \$5.80.

No. 3, say,  $9\frac{1}{4}$  pounds, at 37 cents per pound = \$3.42, or about 46 per cent on \$7.49.

No. 4, say,  $10\frac{3}{4}$  pounds, at 37 cents per pound = \$3.98, or about 40 per cent on \$10.11.

Calculation showing the effect of a duty of 20 per cent ad valorem and 22½ cents per pound:

No. 1, 6¼ pounds, at 22½ cents per pound = \$1.40 = 32 per cent on \$4.30 + 20 per cent = 52 per cent.

No. 2, 7¾ pounds, at 22½ cents per pound = \$1.74 = 30 per cent on \$5.80 + 20 per cent = 50 per cent.

No. 3, 9¼ pounds, at 22½ cents per pound = \$2.08 = 27¾ per cent on \$7.49 + 20 per cent = 47¾ per cent.

No. 4, 10¾ pounds, at 22½ cents per pound = \$2.42 = 24 per cent on \$10.11 + 20 per cent = 44 per cent.

Gray cotton velvets, etc., under the present tariff pay a duty of 40 per cent ad valorem.

The bulk of the gray cotton velvets exported to the United States are the lower priced goods and are dyed in the United States—say, costing from 4d. to 7d. per yard. I append calculation for 3 sorts. The value and weight of wider or narrower goods would be in proportion.

No. 5, 20½ inches wide, 144 yards long, at 4d. per yard = 48s. = \$11.66; weight, 25 to 26 pounds.

No. 6, 20½ inches wide, 144 yards long, at 6d. per yard = 72s. = \$17.49; weight, 33 to 34 pounds.

No. 7, 22 inches wide, 110 yards long, at 7½d. per yard = 68s. 9d = \$16.70; weight, 27 to 28 pounds.

Gray velvets, etc., containing in 1 inch of the warp over 64 threads. (This would include all cotton velvets and fine corduroys.)

Calculations showing the effect of a duty solely by weight at 23 cents per pound:

No. 5, say 25½ pounds, at 23 cents per pound = \$5.86, or about 50 per cent on \$11.60.

No. 6, say 33½ pounds, at 23 cents per pound = \$7.70, or about 44 per cent on \$17.49.

No. 7, say 27½ pounds, at 23 cents per pound = \$6.32, or about 38 per cent on \$16.70.

Calculation showing the effect of a duty of 20 per cent ad valorem and 11 cents per pound:

No. 5, 25½ pounds, at 11 cents per pound = \$2.80, or about 24 per cent on \$11.66 + 20 per cent = 44 per cent.

No. 6, 33½ pounds, at 11 cents per pound = \$3.68, or about 21 per cent on \$17.49 + 20 per cent = 41 per cent.

No. 7, 27½ pounds, at 11 cents per pound = \$3.02, or about 18 per cent on \$16.70 + 20 per cent = 38 per cent.

A few coarse corduroys and velveteens are sent to the United States, and these now pay the same ad valorem duty as the finer goods, viz, 40 per cent in the gray and 47½ per cent dyed or printed. Under a specific duty, or partly specific and partly ad valorem, these would have to be classified separately from the finer goods, or the duty payable upon them would be disproportionate. The two classes of fabric are totally distinct, and, in my opinion, the French system of discriminating them by the number of threads in a specific space in the warp is a reasonable one.

I have only had little experience in the production of this coarser form of pile fabric, but from what knowledge I have I believe the following basis would be about equivalent to the ad valorem duties now payable.

Gray velveteens, corduroys, etc., containing in 1 inch of the warp 64 threads or less:

Entirely specific by weight, 14 cents per pound.

Partly specific and partly ad valorem, 7 cents per pound and 20 per cent ad valorem.

Dyed and printed velveteens, corduroys, etc., containing in 1 inch of the warp 64 threads or less:

Entirely specific by weight, 22½ cents per pound.

Partly specific and partly ad valorem, 13 cents per pound and 20 per cent ad valorem.

The adoption of the principles I have suggested would compel all importers to pay the same amount of duty, and would greatly reduce the frauds to which the revenue is now subject.

I am, yours, most respectfully,

I. HALLWORTH.

## VELVETEEN SKIRT BINDINGS.

(Paragraph 259.)

### AN INDUSTRY PROHIBITED BY A FREAK OF THE LAW.

NEW YORK, *December 29, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

As a manufacturer of bias velveteen skirt binding, I protest against the present ridiculously low figure of duty on this article, the manufacture of which, instead of being protected to us here, is virtually granted to England. Many millions of dollars of bindings each year are made in Manchester, England, for this market, where more than a dozen large manufactories are kept busy on these goods.

Velveteens, or cotton velvets, are listed at  $47\frac{1}{2}$  per cent ad valorem. Bias velveteen binding is cut and made from these goods. The figure the binding is allowed to come in at is 35 per cent. If there is any one article which should be helped by additional duties it is this.

That I can not represent in my plea a number of manufacturers here is only because they do not exist, the industry being prohibited by the present freak of the law.

M. ISAACS.

## PILE FABRICS.

(Paragraph 259.)

### A FLOOD OF FOREIGN IMPORTATIONS.

NEW YORK, *January 7, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

Under the McKinley bill the following schedule was in force: "Cotton pile fabrics, unbleached, dyed, colored, stained, painted, or printed, 10 cents per square yard and 20 per cent ad valorem, on all such goods; if bleached, 12 cents per square yard and 20 per cent ad valorem. If dyed, colored, stained, painted, or printed, 14 cents per square yard and 20 per cent ad valorem, with the restriction that no article that is enumerated should pay less rate of duty than 40 per cent ad valorem.

Under the Wilson bill, all such fabrics unbleached, dyed, colored, etc., 40 per cent ad valorem, and all such goods, if bleached, dyed, colored, etc.,  $47\frac{1}{2}$  per cent ad valorem.

The effect of the removal of the specific duty per square yard on these fabrics has been to allow the importation into this country from English, German, Belgian, and French markets of a vast amount of fabrics of the lower grades ranging from  $6\frac{1}{2}$ d. to 9d. a yard, all goods 27 inches wide. The ad valorem duty on goods of this description is much less than the former specific duty alone. The cost to the consumer has not been lessened to any appreciable extent, but the current rate of duty as compared to the rate formerly in force has diverted the production of such fabrics into the hands of foreign manufacturers to the detriment of American manufacturers, heretofore and now engaged in producing

such fabrics. Under the McKinley bill the specific duty enabled American manufacturers to compete on something like equal terms with foreign makers, but under the Wilson bill, trade in these fabrics has been diverted to the foreign accounts. We, as American manufacturers, pay considerably higher wages than prevail in the foreign factories producing this class of goods.

Under the schedule now in effect we have been obliged to observe with regret and dismay a business which was assuming satisfactory proportions, and was a rapidly growing industry, crippled and hindered by foreign competition made effective and augmented by the Wilson bill. We favor and desire the restoration of the schedule of 1890 as the most equitable and desirable tariff on such fabrics, and as one calculated to stimulate a growing industry. We therefore pray the committee's favorable consideration of such restoration of duty.

JOHN F. MEADER,  
*Agent Centerville Manufacturing Company.*

## CORDUROYS.

[Paragraph 259.]

### THE AMERICAN PRODUCER BEING DRIVEN FROM THE MARKET.

WASHINGTON, *January 7, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

Representing the woolen manufacturers of the Middle West, I earnestly ask your consideration to the importation of English corduroys which are driving the American producer from this market. This arises from a conflict of schedules, or the placing of English corduroys in paragraph 259 of the present law with plushes, etc., which are used for upholstery, whereas corduroys are used for men's wearing apparel. The present law, paragraph 259, reads as follows:

Plushes, velvets, velveteens, corduroys, and all pile fabrics composed of cotton or other vegetable fiber, not bleached, dyed, colored, stained, painted or printed, forty per centum ad valorem; on all such goods if bleached, dyed, colored, stained, painted, or printed forty-seven and one-half per centum ad valorem.

The same classification was made under the McKinley law, paragraph 350, which was as follows:

Plushes, velvets, velveteens, corduroys, and all pile fabrics composed of cotton or other vegetable fiber, not bleached, dyed, colored, stained, painted, or printed, ten cents per square yard and twenty per centum ad valorem; on all such goods if bleached, twelve cents per square yard and twenty per centum ad valorem; if dyed, colored, stained, painted or printed, fourteen cents per square yard and twenty per centum ad valorem; but none of the foregoing articles in this paragraph shall pay a less rate of duty than forty per centum ad valorem.

Every manufacturer joins me in asking that in the new tariff law you will incorporate a separate section for corduroys, which shall read as follows:

Corduroys composed of cotton or other vegetable fiber, not bleached, dyed, colored, stained, painted, or printed, sixteen cents per square yard and twenty-five per centum ad valorem; on all such goods if bleached, eighteen cents per square yard and forty per centum ad valorem; if dyed, colored, stained, painted, or printed, twenty cents per square yard and fifty per cent ad valorem.

We ask this for the following reasons:

First. I beg to call your attention to the alarming increase in importations, and only refer to the completely finished article imported under the following phraseology: "Corduroys, bleached, dyed, colored,

stained, painted, or printed." The following table shows the importations in quantity, value, and duty paid, for the years 1891 to 1896, inclusive:

## IMPORTATIONS OF ENGLISH CORDUROYS.

| Year.      | Quantity.       | Value.        | Duty.         |
|------------|-----------------|---------------|---------------|
|            | <i>Yards.</i>   |               |               |
| 1891 ..... | 107, 730. 50    | \$38, 015. 00 | \$22, 685. 27 |
| 1892 ..... | 528, 292        | 183, 431. 52  | 110, 547. 18  |
| 1893 ..... | 1, 150, 681. 37 | 397, 530. 41  | 240, 601. 47  |
| 1894 ..... | 464, 443. 83    | 171, 203. 75  | 99, 262. 89   |
| 1895 ..... | 1, 472, 561     | 481, 240. 49  | 232, 878. 52  |
| 1896 ..... | 1, 676, 587. 72 | 554, 300. 00  | 263, 292. 59  |

You will appreciate that the corduroys imported are made exclusively of cotton, and come into direct competition with our wool products on account of fineness of finish, and this is attained on account of the phenomenally cheap labor employed in England, which it is impossible for us to duplicate in the United States.

Referring to previous legislation, it is manifest that there was a misapprehension regarding the use of English corduroys, they being placed in a section with plushes, etc., used for upholstery. Corduroys are used for men's wearing apparel, and for this reason should be treated as wearing apparel. For this reason I ask, as above, a separate section placing duties upon this product.

Even under the present law, with free wool to the manufacturer, we have lost the American market on account of the importation of English corduroys. With the restoration of the duty upon wool we will not be able to manufacture a yard of cloth which comes into competition with the English corduroy.

Four years ago we had 29 mills west of the Allegheny Mountains, operating 3,750 looms, engaged in the manufacture of jeans exclusively. To-day we have in the same territory 13 factories, operating 1,650 looms. Thus you will notice a reduction of more than one-half of the looms in operation, and in addition to that I would say that during the last twelve months these 1,650 looms have been running not more than half time.

The English corduroys, more than all other classes of goods, have been instrumental in driving us from the American markets.

B. A. JAMES,

*For the woolen mills west of the Allegheny Mountains.*

## UNDERVALUATIONS OF FORTY PER CENTUM.

LOUISVILLE, KY., *January 11, 1897.*

## COMMITTEE ON WAYS AND MEANS:

We would call your attention to the fact that the corduroys imported during the years 1895 and 1896 came in under the Wilson bill, and were brought in at an undervaluation of about 40 per cent, as nearly as we can learn. While we have no means of getting at the actual undervaluation, our impression is—and the best information we can get leads us to believe—it was very great. Adding this undervaluation to the value of the goods brought in during 1895 and 1896, you can see how enormously the importations have increased in quantity and value, and consequently how very seriously our industry must have been affected.

Corduroys have been classified in all past tariff bills, together with plushes, velveteens, and similar fabrics, used almost exclusively by

upholsterers, while in actual commercial usages, corduroys are used almost altogether for wearing apparel. Therefore, corduroys should be placed in a separate schedule, and the duty be made ample to prevent their coming in competition with goods made in America for wearing apparel.

Taking into consideration the commercial position corduroys fill in the markets, the duty asked for in the recommendation of B. A. James is not sufficient to entirely overcome the competition derived from them. Corduroys are made wholly from cotton, and by cheap foreign labor, but on account of their peculiar finish and slightly appearance, are in commercial practice, direct competitors of American-made woolen goods. We thought best, however, to ask for a moderate duty only, and one to which no one, who understands the commercial position of corduroys, could object.

HENRY W. BARRET & Co.

## COTTON AND SILK LABELS.

(Paragraph 260.)

### IMPORTANT INDUSTRY TRANSFERRED TO FOREIGN COUNTRIES.

NEW YORK, *December 28, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We, the undersigned manufacturers of silk and cotton labels of the United States, respectfully petition your honorable body when preparing a new tariff bill to make such provision for our line of manufactures as will again establish the industry in this country, and in support of the request beg leave to submit as follows:

The label industry was formerly conducted with profit to employer and employed alike, but the results of the past three years have witnessed the transfer of this industry to foreign countries where cheap labor abounds, and the present conditions of the trade are that about 80 per centum or more of the labels used in this country are imported.

The first disastrous effect to our trade was felt soon after a decision by the Board of United States General Appraisers, a copy of which, marked Exhibit A, is herewith inclosed, wherein it is seen that the changed classification caused the lowest possible rate of duty to apply, the rate being now 35 per cent ad valorem on cotton and 45 per cent on silk goods.

Soon after these changed conditions it was discovered, even at the low rate of duty, importers were extensively undervaluing their invoices, as is seen in Department Circular No. 128 of July 30, 1896, copy marked Exhibit B, where advances of 33 per cent were made and sustained on appeal before the United States General Appraisers. The effect of such undervaluation and changed classification has rendered competition with foreign products out of the question, and we have despaired of trying against such odds. Furthermore, we beg to state the quality of cotton yarn we use in the manufacture of labels is of the grade which carries the highest rate of duty—of 45 per cent. It is not manufactured in this country, and thus you have at present the raw material coming in at 45 per cent and the manufactured article at 35 per cent.

In our opinion, a compound duty on cotton labels of 60 cents per pound and 40 per cent ad valorem would about restore the conditions existing four years ago, when the rate was 60 per cent ad valorem. And on silk goods we beg to suggest a restoration of the rates of the act of 1890, which was also 60 per cent ad valorem.

We feel, in asking for the above rates of duty, that we do the importers nor the Government no injustice; that the former will, as formerly, be able to import and the Government to derive more revenue by reason of increased duties.

AMERICAN SILK LABEL MANUFACTURING Co.,  
 GEORGE HEY.  
 NEW YORK WOVEN LABEL Co.,  
 J. WARDROP.  
 PATERSON LABEL Co.,  
 JOHN BEST, *Prop.*

---

EXHIBIT A.

(14623—G. A. 2381.)

SHIRT LABELS NOT EMBROIDERIES.

Before the United States General Appraisers at New York, December 21, 1893.

[In the matter of the protest, 26503 a-12041, of German Artistic Weaving Co., against the decision of the collector of customs at New York as to the rate and amount of duties chargeable on certain cotton labels imported per *Pennland*, March 28, 1892. Opinion by Sharretts, General Appraiser.]

The goods in question are described in the invoice as shirt labels. These articles are composed of cotton, and vary in width from  $\frac{1}{2}$  inch to 2 inches. By means of colored cotton threads woven in the fabric certain words, letters, and trade-marks were produced on a white foundation. The collector classified the goods as manufactures of cotton embroidered, and assessed duty thereon at 60 per cent ad valorem, under paragraph 373. We find the same are manufactures of cotton not commercially known as trimmings nor as embroideries, and are not embroidered by hand or machinery. The claim of the appellants that the merchandise is dutiable at 40 per cent ad valorem, under paragraph 355, in our opinion is well founded.

The protest is sustained and the collector's decision is reversed.

---

EXHIBIT B.

(From Department Circular, No. 128, July 30, 1896.)

Art. 46, woven initials, entered at .25, advanced to .26 mark per gross.  
 Art. 80, woven initials, entered at .12, advanced to .16 mark per gross.  
 Art. 10, woven initials, entered at .14, advanced to .17 $\frac{1}{2}$  mark per gross.  
 Art. 14, woven initials, entered at .12, advanced to .16 mark per gross.  
 Add inland carriage, packing, etc.

---

PRESENT RATES AFFORD AMPLE PROTECTION.

NEW YORK, *December 26, 1896.*

COMMITTEE ON WAYS AND MEANS:

We respectfully beg to submit a brief statement to the committee touching the proposed tariff legislation. Being engaged in the importation of silk woven labels (Schedule L) and cotton woven labels (Schedule I), set for a hearing on the 29th of December, we beg to enter our protest against any proposed increase of duty on these articles. We are now obliged to pay a duty of 45 per cent ad valorem on our silk goods and 35 per cent ad valorem on our cotton goods. An increase of duty on either of these would make competition entirely out of the question. We are about to engage in the manufacture of woven labels in this country, as well as on the other side, and feel that domestic manufacturers are amply protected by the present rates, since they are now in a position to even undersell importers in this market.

INTERNATIONAL WEAVING Co.

## HOSIERY AND KNIT GOODS.

(Paragraphs 261 and 262.)

TUESDAY, *December 29, 1896.*

## STATEMENT OF MR. ROBERT PILLING, OF PHILADELPHIA.

Mr. PILLING said:

Mr. Chairman and gentlemen of the committee, I regret to say our schedule is not made up, but we are working on it; but we have so many interests to protect that we have not been able to get together at the present time, and I would like to ask the indulgence of the committee for two or three days more before presenting our schedules, which we will submit in writing, covering all the points we possibly can. We want a change; the law does not satisfy us now. It is a very important industry. It has averaged for the last ten years about \$6,000,000 per annum, I think. The cotton schedule I think probably is about \$20,000,000, and this little industry of stockings represents one-third of the article, including webbing, braid, etc., but we have not had time to get thoroughly together. If you will allow us two or three more days, we will be prepared for you. If you want to ask me any questions, I will be pleased to answer them.

The CHAIRMAN. What are the difficulties you find with the present hosiery schedule, which is purely ad valorem?

Mr. PILLING. In the first place it is not enough for our fashion goods, which is the bulk of the goods. For fashion goods coming from Germany 60 per cent is not enough, and in the next place undervaluations we know are being carried on, and which, under specific duty, I think, we may be protected against.

The CHAIRMAN. You will be able to submit your statement in writing within a few days?

Mr. PILLING. Within two or three days before going away from Washington.

The CHAIRMAN. That will be satisfactory.

Mr. PILLING. I would like to say in regard to underwear, we will submit that, too. On underwear we will probably not ask for any change. Now, I would like to say that paragraph 261 in the Wilson bill—we want to strike that out, as that belongs to a former day. It does not meet the conditions of to-day at all, as it is not imported, and that does not cover any point, and it is simply a loophole to bring in more expensive goods.

The CHAIRMAN. You say the importation of hosiery is mostly in the full-fashioned goods?

Mr. PILLING. Of full-fashioned goods made in Germany mostly.

The CHAIRMAN. And the seamless goods are not imported to a great extent?

Mr. PILLING. Not at present, but it is growing. That will be our next trouble. The seamless machines are already over there and they are putting on the market some goods.

The CHAIRMAN. This seamless machine is an American invention, and therefore an American industry originally, and now the machines are going abroad?

Mr. PILLING. They are not only going abroad, but the goods are now being made abroad, and that will be our next competition.

Mr. DALZELL. What did you say about striking out some section?

Mr. PILLING. Strike out paragraph 261, as that covers the old cut goods under the McKinley law.

Mr. McMILLIN. What do I understand you to say about paragraph 260, "stockings, hose, half hose, etc.," is that what you want to submit a new schedule on?

Mr. PILLING. There are two paragraphs there, one No. 261 and the other No. 262.

Mr. McMILLIN. Did you propose to recast both?

Mr. PILLING. We want to strike out 261 altogether.

Mr. McMILLIN. You want to strike out 261 and recast No. 262?

Mr. PILLING. Yes, sir.

Mr. McMILLIN. What I would like to have an explanation of briefly is, why you want clause No. 261 stricken out?

Mr. PILLING. This is a stocking made under paragraph 261, and the law was made to cover that stocking (exhibiting same). They were making 2,000 or 3,000 dozen a day. Now they are not making them or importing them. That paragraph was intended to cover this stocking, but it can not be sold now. That ought to be stricken out because there are no sales for that stocking now.

The CHAIRMAN. I notice of the importations for 1896 there were 5,181,000 dozen pairs imported, with an average valuation of \$1.08 per dozen. What is your judgment as to the true average valuation of the importations of hosiery, they seem to be imported at \$1.08?

Mr. PILLING. May I go back to the McKinley law? We came before the Ways and Means Committee and got what we asked for. We put the schedule down at 60 cents. The importers said they never could bring in fashion goods under 60 cents, yet in 1893 there were a million and a third dozen that came in at 59.

The CHAIRMAN. Finished or unfinished goods?

Mr. PILLING. Both kinds, but very largely finished goods at 59 cents, and one never heard of it before. There were about 3,500,000 dozen in 1893 that came in. The unit of value there was \$1.19 and a million and a third at 59 cents, and all the rest at \$1.19. Now, the last importation for 1896 comes in with a unit of value of \$1.08. That would give a wide range, as there is a wide range in hosiery.

Mr. McMILLIN. The rate on these things now is 80 per cent?

Mr. PILLING. Ad valorem.

Mr. McMILLIN. And on the shirts, drawers, etc., do you seek to recast that, that is 38 per cent?

Mr. PILLING. That we want to obliterate entirely. That is covered under the 50 per cent ad valorem.

The CHAIRMAN. Will you please state to this committee if most of this hosiery is not made in Germany?

Mr. PILLING. Yes, sir.

The CHAIRMAN. Will you please state to the committee if you know the labor conditions under which these goods are made in Germany as compared with this country?

Mr. PILLING. The labor condition there, as near as we can get at it, is that a mark there represents a dollar here. We have often made that statement and can verify it. A mark there represents a dollar here in wages. Besides that there is unfair competition—

The CHAIRMAN. Do you mean to say the wages are four times higher here than they are there?

Mr. PILLING. As one is to four. Besides that they have these small

machines spread all over the country, and can work night and day if they wish to, and they work for a mere pittance. That is the way a good deal of the hosiery is made over there, as I understand it. Now, there is one thing we want to do and that is to commence the making of fashioned goods in this country. For the last twenty years we have been struggling to get a foothold to make full-fashion goods, the only thing we import, and we are seeking for it to-day, and there are four or five small mills struggling along trying just to keep their heads out of water. We are all represented in this room, I think, but one. I tried the thing about seven years myself and lost money on every dozen. That was away back in 1883 and 1890 and I threw the machines out and I presume others did the same. We are taken care of pretty well on the lower class of goods, but when we get to the seamless we will have competition and will be wiped out. For twenty years we have been trying to establish these full-fashion goods in this country but have not succeeded. There are two or three of these small mills and they want to enlarge them, but they can never do it at the present rate of duty.

Mr. WHEELER. You stated under the McKinley bill you could not protect your manufacture?

Mr. PILLING. Under the McKinley bill we had the fence at 60 and they walked under it. The importers said that they could not buy the goods on the other side. Mr. Lowe, one of the principal importers in New York, made the statement. They said, "Buy the goods in New York and we will meet them," and they did, but how we do not know.

The CHAIRMAN. You will submit a statement in writing covering this ground?

Mr. PILLING. Yes, sir.

#### STATEMENT SUBSEQUENTLY SUBMITTED BY MR. PILLING.

WASHINGTON, D. C., *December 29, 1896.*

The proposed changes given below covering cotton hosiery are to take the place of paragraphs 261 and 262 in the Wilson bill, which are as follows:

Paragraph 261: Stockings, hose, and half hose, made on knitting machines or frames, composed of cotton or other vegetable fiber and not otherwise specially provided for in this act, thirty per centum ad valorem.

Paragraph 262: Stockings, hose, and half hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless or clocked stockings, hose, or half hose, and knitted shirts and drawers, all of the above composed of cotton or other vegetable fiber, finished or unfinished, fifty per centum ad valorem.

We respectfully submit, first, the abolishing of paragraph 261, for the reason that the amount imported and the duty collected are so insignificant as to be slight in importance either in producing revenue or affording protection to American manufacturers. It covers what is known as "cut hosiery," a class of goods formerly manufactured in this country very largely, but which are being displaced by seamless goods, and of which the importation for the year ending June 30, 1896, was in value \$18,495.38, and the duty collected \$5,548.62.

In place of paragraph 262 the following new paragraph:

Stockings, hose, and half hose made on knitting machines or frames, or knit by hand, finished or unfinished, composed of cotton or other vegetable fiber, valued at not more than \$1.50 per dozen pairs, 40 cents per dozen pairs, and in addition thereto 35 per centum ad valorem; valued at more than \$1.50 per dozen pairs, 50 cents per dozen pairs, and in addition thereto 40 per centum ad valorem.

It has been demonstrated that the duties under the Wilson bill have failed to give the necessary protection to the knit-goods industry of this country, and while it may appear to your committee that we are asking for large duties upon the low-priced goods, we would respectfully submit the statement that the labor differences which positively exist between Germany, our greatest competitor, and this country, applying equally to both low and high priced goods, will more than cover the duties asked for.

Mr. Monaghan, our consul in Germany, will verify the statement that the differences of labor employed in hosiery between that country and our own will amount to a large percentage. The leading items of manufacturing fashioned hosiery are as follows:

*Wages per week.*

|                     | Germany. | United States. |                 | Germany. | United States. |
|---------------------|----------|----------------|-----------------|----------|----------------|
| Winding .....       | \$2.00   | \$6.00         | Boarding .....  | 2.00     | 7.00           |
| Knitting legs ..... | 4.50     | 12.00          | Pressing .....  | 4.00     | 12.00          |
| Knitting feet ..... | 5.00     | 15.00          | Finishing ..... | 1.50     | 5.00           |
| Transferring .....  | 1.75     | 4.00           | Foremen .....   | 7.00     | 18.00          |
| Looping .....       | 2.00     | 7.00           |                 |          |                |
| Seaming .....       | 2.00     | 7.00           | Total .....     | 33.50    | 99.60          |
| Mending .....       | 1.75     | 6.00           |                 |          |                |

A difference, on the average, of nearly 300 per cent.

The purpose of the increase asked for in the duties is not to add to the tax upon the poor man or to create a monopoly, something never heard of in this industry, and with about 900 manufacturers simply impossible, but by fixing specific and ad valorem rates compel the importers to pay their legitimate duties, providing additional revenue for the Government, and enabling the hosiery manufacturers to give employment to their people.

It is a fact that a great many of the American hosiery mills are only partly employed. Consequently their hands are idle and great distress exists among them. It is also a fact that there has been a vast overproduction of the ordinary class of hosiery that sells for two pairs for 25 cents and 10 cents per pair. This overproduction can only be relieved by an additional protection sufficient to enable some of this large number of mills to make the better and finer goods that are now so largely imported.

This better and finer grade of goods can be made in this country, and will be in large quantities after the industry is once established by the very manufacturers that to-day are compelled to make the common grade of goods.

This congested condition is brought about by an insufficient rate of duty and by ad valorem duties which encourage undervaluation to an alarming extent.

What we ask is simply and only rates of duty that will protect us sufficiently to produce some of the better class of goods, but to do this we are compelled to ask chiefly for specific duties and high enough to protect us against the cheap German goods.

If the proposed increase in duty asked for be considered simply from a revenue standpoint, we would call your attention to the fact that, notwithstanding the reduction made in the rates of duty from the McKinley to the Wilson bill, the importations varied but slightly, while the revenue was largely reduced.

As an illustration we give the amounts imported under the McKinley bill for the year ending June 30, 1893, with duties collected and also under the Wilson bill for the year ending June 30, 1896, as follows:

|                      | Value.            | Duties.           |
|----------------------|-------------------|-------------------|
| 1893, McKinley ..... | \$5, 694, 642. 02 | \$3, 932, 389. 99 |
| 1896, Wilson .....   | 5, 605, 241. 48   | 2, 802, 620. 74   |
| Difference .....     | 89, 400. 54       | 1, 129, 769. 25   |

These figures show a difference in importations of less than \$90,000 between the two years and a loss in revenue to the Government of over \$1,000,000.

These two years are quoted because they are more nearly representative of the two systems, being far enough removed from the time of their original passage to prevent their being affected by the increasing or decreasing of the importations because of anticipated change in rates.

An examination of other years since the Wilson bill became law will show similar results.

ROBERT PILLING, *Chairman,*  
2150 E. Huntingdon street, Philadelphia, Pa.

#### STATEMENT OF MR. ROBERT W. COOPER, PRESIDENT OF THE BRITISH HOSIERY COMPANY, OLNEYVILLE, R. I.

Mr. COOPER said:

Mr. Chairman and gentlemen of the committee, we make exclusively selvedged full-fashioned goods, cotton and cashmere, and I have a memorandum here of the average cost of the goods we make. These stockings cost in Germany  $5\frac{1}{2}$  marks, equal to \$1.37. Our labor costs on them for the leg, foot, turning off, seaming, counting, and factory expenses 72 cents per dozen. The same labor in Germany is 24 cents per dozen, just exactly three times the cost with us as it is in Germany. The dyeing, finishing and folding, boxing, and warehouse expenses are 44 cents per dozen, and the same work in Germany is done for 19 cents per dozen, which makes our total cost \$1.16 in wages, whereas in Germany it is 43 cents. The cost of our yarn in this country is 45 cents, and in Germany it is 37 cents. The expense in selling where we sell for ourselves is 5 cents per dozen, and I put their expense at the same, which makes our cost \$1.66 and the German cost 85 cents per dozen, which shows clearly we require on that class of goods, to be equal with Germany, 81 cents per dozen.

The CHAIRMAN. And that is in labor?

Mr. COOPER. That is in labor; and for protection I would ask on behalf of our own firm a protection of 41 cents per dozen and 30 per cent, which is equal to 81 cents.

The CHAIRMAN. Combining a specific with an ad valorem duty?

Mr. COOPER. That should be the duty on all goods costing \$1.50 and under. That is as far as we are interested. There are others who make a better class of goods who require a higher protection. These machines on which these goods are made are very expensive, and the average cost is about \$3,000. We require a class of labor to work these machines who are not only expert knitters, but they must be experienced mechanics who can take care of such valuable property, and these men earn \$12 per week, while in Germany they earn 16 marks, which is \$4 a week.

We think the men who can work these machines are entitled to \$12 a week, as the cost of living is greater in this country, and the women who are occupied with that work of the seaming and other departments earn \$6 a week, while in Germany they only earn \$1.75 per week.

Mr. STEELE. Is it not just as easy to have the duty specific as to combine the specific with ad valorem?

Mr. COOPER. We require an ad valorem to protect the higher classes. When I say \$1.50 perhaps, we have to calculate for dollar goods or 95 cents, because where this duty—

Mr. STEELE. Could it not be done by different fences?

Mr. COOPER. In my opinion it is better to be one rate in order to protect us from undervaluation.

The CHAIRMAN. That is, you make it one line of fence and that is \$1.50, and then above \$1.50 another rate?

Mr. COOPER. Yes, sir.

The CHAIRMAN. You combine the ad valorem with the specific in order to avoid the rate being so high on the cheap goods?

Mr. COOPER. Yes, sir. The protection on the cheap goods with this at a dollar would give 70 per cent.

Mr. McMILLIN. What is the cheapest grade of goods you make?

Mr. COOPER. Well, the lowest goods we can produce is \$1.25 a dozen.

Mr. McMILLIN. You receive 50 cents a dozen and 30 per cent ad valorem?

Mr. COOPER. Forty cents per dozen and 30 per cent ad valorem.

Mr. McMILLIN. You are in favor, then, of an ad valorem system combined with a specific?

Mr. COOPER. Yes, sir.

Mr. McMILLIN. In order to get the higher rate of duty on the higher grades of goods?

Mr. COOPER. Yes, sir.

Mr. McMILLIN. But you devise no means by which you get a lower rate on goods which go down, say to \$1.25.

Mr. COOPER. Well, I take the average protection as about 70 per cent.

Mr. McMILLIN. Seventy cents on the dollar of manufactured goods?

Mr. COOPER. Yes.

Mr. McMILLIN. Do you think that will be prohibitory or merely a revenue duty?

Mr. COOPER. A revenue duty. It will not be prohibitory, because our cost comes to exactly the same with that protection as their cost.

The CHAIRMAN. That is, you equalize the conditions of the two countries?

Mr. COOPER. Yes, sir.

Mr. McMILLIN. How about the transportation which you have not to contend against?

Mr. COOPER. If you will allow me to follow that up. The total cost of the yarn and wages in this country is \$1.66, while in Germany it is 85 cents. The interest and depreciation of machinery is put at 20, and I put the same in Germany, giving them equal facilities. Manufacturer's profit I put at 10 per cent on \$1.86, which is 19 cents, and I put 19 cents for them. Trade discount to customers I put at 6 per cent on \$2.18, which is 13 cents, and I put the same for each.

Mr. McMILLIN. You estimate all of these as the elements of cost of your goods?

Mr. COOPER. Yes. The total cost of this article makes \$2.18 in both countries, with the 81 cents duty added to the German cost.

Mr. EVANS. Do you not think the difference in these various items would make up the cost of transportation to this country?

Mr. COOPER. Yes, sir; that is what I calculate.

Mr. McMILLIN. What do I understand you to include in the labor cost in the beginning of your statement? I am not sure I got that statement accurately.

Mr. COOPER. I take the cost of the stocking from the beginning up to the time it goes out of the house.

Mr. McMILLIN. You get your raw material free—free wool?

Mr. COOPER. I am talking of cotton now. The yarn which we buy for that stocking costs us 45 cents, while in Germany it costs 37 cents. I have given that before, and the labor on the stocking from the beginning to its finished condition—

Mr. McMILLIN. Now, let us see what items of labor are included in that; that is the point I want to get at.

Mr. COOPER. Making the leg, the feet, turning off, seaming, counting, and factory expenses—

Mr. McMILLIN. That is what I want to find out. What are the factory expenses?

Mr. COOPER. Running the engines and machines, repairs, and general expenses, such as oils, supplies, etc.

Mr. McMILLIN. You include all that as labor?

Mr. COOPER. As the actual cost of labor; yes, sir.

Mr. McMILLIN. That is what I was trying to get at.

Mr. COOPER. Yes, sir; I have not made an item of general trade expenses, but I put it in that form. Up to that point our goods cost 72 cents, while the same goods in Germany cost 34 cents. Then the finishing costs 44 cents, whereas theirs costs but 19 cents. The dyeing, trimming, folding, and boxing, etc., costs 44 cents a dozen here, and the cost of the same in Germany is 19 cents a dozen.

Mr. McMILLIN. Does that include the cost of the dyes?

Mr. COOPER. Yes, sir.

Mr. McMILLIN. You include that as labor?

Mr. COOPER. Yes, sir; that is a very small item.

Mr. McMILLIN. I was only wanting to see what you included as labor.

Mr. PAYNE. You sell your product principally in New York City, do you not?

Mr. COOPER. Yes, sir; New York, Chicago, Boston, and Philadelphia.

Mr. PAYNE. And the Germans sell their product principally in New York City?

Mr. COOPER. Yes.

Mr. PAYNE. Do you know whether or not your freight is less from your place to New York than their freight is from Germany to New York?

Mr. COOPER. Oh, yes; it is less.

Mr. PAYNE. How much less?

Mr. COOPER. The freight is very small, so small that you can scarcely get a percentage. Our freight is possibly a dollar a hundred dozen, and their freight might probably be \$2 per hundred dozen.

Mr. PAYNE. You are speaking now not from actual knowledge, I suppose?

Mr. COOPER. Not about their freight—no.

Mr. PAYNE. Do you know their goods are actually delivered from

Germany to Chicago and St. Louis cheaper in freight than from New York in many instances?

Mr. COOPER. No; I did not know that.

Mr. PAYNE. I am told that is the fact.

Mr. WHEELER. Is it not true the manufacturer of Germany is about as far removed from the seaboard as you are from New York?

Mr. COOPER. Yes; they are fully that far.

Mr. WHEELER. Then this estimate of freight would be from the seaboard?

Mr. COOPER. Yes, I presume they pay freight to the seaboard. There are very few importations of these goods at less than a dollar a dozen. The seamless goods in this country have taken the place of that class of goods.

Mr. RUSSELL. When did you establish your industry here?

Mr. COOPER. Twelve years ago.

Mr. RUSSELL. You brought your plant from England, so to speak?

Mr. COOPER. Yes, sir; machines and skilled workmen.

Mr. RUSSELL. Have you been running for the last two years much?

Mr. COOPER. Yes, sir; we have been running.

Mr. RUSSELL. Steadily?

Mr. COOPER. Not steadily for the last six months, but we have been running without a profit I will say from the beginning. We have been trying to get this industry established, and in the twelve years we have been here we have not paid any dividends. It has been a hard struggle. We were just getting on our feet under the McKinley bill, but the Wilson bill would have destroyed us unless we had a good backing in our stockholders.

TUESDAY, *December 29, 1896.*

#### STATEMENT OF MR. JAMES TALCOTT, REPRESENTING THE AMERICAN HOSIERY COMPANY, OF NEW BRITAIN, CONN.

Mr. TALCOTT said:

Mr. Chairman and gentlemen of the committee, I represent the American Hosiery Company, of New Britain, Conn., large manufacturers of full-fashioned hosiery and underwear. The industry has been very much crippled under the present law. It is an industry that could be developed either as a revenue matter for the Government to bring in a great deal of revenue or else manufacture the goods here and employ a large amount of labor for the benefit of the manufacturer and laborer. At present it is for the benefit of foreign countries. The goods are worn almost exclusively by the well-to-do or wealthy classes. As an economical measure without regard to party it is one which should be developed in this country, either as a revenue measure, as I said, or for the benefit of the manufacturer and laborer.

STATEMENT SUBMITTED BY MR. TALCOTT.

NEW YORK, *December 28, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

The American Hosiery Company of New Britain, Conn., the largest manufacturers of full-fashioned hosiery and knit underwear in the country, and having the latest improved machinery, are capable of manufacturing goods in large quantities, equal in quality to the best in the world. These goods are used by the well-to-do (wealthy) classes, and the labor forms the largest proportion of the cost. Full-fashioned goods are knit on complicated and very expensive frames, which narrow and widen the

fabric in the process of manufacture, and so give it any required shape. The garments are then seamed or made up either by hand or machines which imitate hand work, taking up the selvage loops and avoiding objectionable seams or raw edges. All the machines used for full-fashioned goods are slow in their operation; difficult to keep in order, they require skillful operators and the closest care. To compete with foreign manufacturers requires great care and intelligent, well-paid, and satisfied labor. The production of fine full-fashioned goods is, we think, creditable not only to the manufacturer, but to the country, and there is no reason why goods equal to foreign make should not be produced here under suitable protection. Under the present tariff our industry has been very much depressed, and the mill has been either stopped at intervals or run upon a limited production.

AMERICAN HOSIERY Co.,  
New Britain, Conn.  
JAMES TALCOTT, Agent,  
108 Franklin Street, New York.

Mr. McMILLIN. What is the present rate?

Mr. TALCOTT. Fifty per cent ad valorem.

Mr. DALZELL. Paragraph 262 covers your goods?

Mr. TALCOTT. I forget the section now, but it is 50 per cent. We require a graded schedule, as we wish to manufacture these goods running up into the fine grades.

Mr. PAYNE. Do you have any difficulty growing out of the undervaluation of imported goods?

Mr. TALCOTT. Yes; there is no doubt there are undervaluations—in fact, there does not seem to be any valuation to them.

Mr. DALZELL. What is your suggestion in regard to the amount of tariff?

Mr. TALCOTT. I would like a grade running up, with a specific and ad valorem duty graded upon the different prices.

Mr. DALZELL. On both hosiery and underwear?

Mr. TALCOTT. Yes, sir. We make very fine goods—a class of goods that the wealthy classes use almost exclusively, which are altogether or very nearly all imported.

Mr. McMILLIN. About what rate do you ask?

Mr. TALCOTT. Well, I have not fully determined that. I have not made up my schedule, but I will have that very soon.

Mr. McMILLIN. You have no idea in regard to that?

Mr. TALCOTT. I would want more than the present rate. There is no use of having 40 or 75 per cent if it does not protect. I want just enough to protect.

Mr. McMILLIN. What is your idea in regard to the rate? You have given the matter careful study, I infer.

Mr. TALCOTT. I could not give that exactly to day, but it will not do any good to have 10 per cent more and the goods still keep coming in. And if the Government wants to use the hosiery business for revenue instead of for manufacturing them here, why—

Mr. McMILLIN. You want sufficient to keep them out?

Mr. TALCOTT. Yes, sir; that is what I want. I want the Government to either derive enough revenue from the industry or else I want enough to protect them to have it manufactured here. These goods are worn by people who are perfectly able to pay for them, and—

The CHAIRMAN. Your idea is the duty can be increased simply as a matter of revenue and can come out of the well-to-do people?

Mr. TALCOTT. I think it might be materially increased as a matter of revenue alone.

The CHAIRMAN. You propose to submit a statement covering the ground, with your reasons?

Mr. TALCOTT. Yes, sir.

## STATEMENT SUBSEQUENTLY SUBMITTED BY MR. TALCOTT.

## COMMITTEE ON WAYS AND MEANS:

The American Hosiery Company, of New Britain, Conn., respectfully submit the following schedule of duties required on fashioned hosiery, knit shirts and drawers (other than fashioned), and fashioned shirts and drawers, to meet the foreign competition consequent on the lower cost:

## FASHIONED HOSIERY.

On stockings, hose, and half hose, selvaged, fashioned, narrowed or shaped wholly or in part by knitting machines or frames, or knit by hand, composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than \$1.50 per dozen pairs, 50 cents per dozen pairs, and in addition thereto 30 per cent ad valorem; valued at more than \$1.50 per dozen pairs and not more than \$3 per dozen pairs, 75 cents per dozen pairs, and in addition thereto 40 per cent ad valorem; valued at more than \$3 per dozen pairs and not more than \$5 per dozen pairs, \$1.25 per dozen pairs, and in addition thereto 40 per cent ad valorem; valued at more than \$5 per dozen pairs, \$2 per dozen pairs, and in addition thereto 40 per cent ad valorem.

## SHIRTS AND DRAWERS (NOT FASHIONED).

On knit goods, shirts or drawers, and all other articles of wearing apparel, made on knitting machines or frames, or knit by hand, composed of cotton or other vegetable fiber, finished or unfinished, valued at not more \$3 per dozen, \$1 per dozen and 30 per cent ad valorem; valued at more than \$3 per dozen and not more than \$5 per dozen, \$1.15 per dozen and 40 per cent ad valorem; valued at more than \$5 per dozen and not more than \$7 per dozen, \$1.30 per dozen and 40 per cent ad valorem; valued at more than \$7 per dozen, \$2 per dozen and 40 per cent ad valorem.

## SHIRTS AND DRAWERS (FASHIONED).

On knit goods, shirts or drawers, and all other articles of wearing apparel, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, finished or unfinished, valued at not more than \$3 per dozen, \$1 per dozen and 40 per cent ad valorem; valued at more than \$3 per dozen and not more than \$5 per dozen, \$1.50 per dozen and 40 per cent ad valorem; valued at more than \$5 per dozen and not more than \$7 per dozen, \$2 per dozen and 45 per cent ad valorem; valued at more than \$7 per dozen, \$2.50 per dozen and 45 per cent ad valorem.

JOHN B. TALCOTT, *President.*

JAMES TALCOTT, *Agent.*

## COTTON HOSIERY, SHIRTS AND DRAWERS.

## STATEMENT SUBMITTED AND RATES RECOMMENDED BY SAMUEL TOWNSEND, OF NEW YORK CITY.

NEW YORK, *January 7, 1897.*

## COMMITTEE ON WAYS AND MEANS:

We propose tariff changes as given below:

Present law, Paragraph 261. Stockings, hose, and half hose made on knitting machines or frames, composed of cotton or other vegetable

fiber, and not otherwise specially provided for in this act, 30 per centum ad valorem.

Paragraph 262. Stockings, hose, and half hose, selvaged, fashioned, narrowed or shaped, wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless or clocked stockings, hose, or half hose, and knitted shirts or drawers, all of the above composed of cotton or other vegetable fiber, finished or unfinished, 50 per centum ad valorem.

We respectfully request the abolishing of Paragraph 261, for the reason that the importations under this paragraph for the year ending June 30, 1884, were, in value, \$672,064.20, and have gradually dwindled to \$18,495.38 for the year ending June 30, 1896. It covers what is known as cut hosiery, a class of goods rapidly disappearing from use, and which will soon cease to be made.

We request one paragraph covering all grades of hosiery and shirts and drawers, as follows:

Stockings, hose, and half hose, made on knitting machines or frames or knit by hand, finished or unfinished, composed of cotton or other vegetable fiber, costing not more than \$2 per dozen pairs, 50 cents per dozen pairs, and in addition thereto 35 per centum ad valorem; costing more than \$2 per dozen pairs, 50 cents per dozen pairs, and in addition thereto 50 per centum ad valorem; and all shirts, drawers, and underwear of any description, finished or unfinished, composed of cotton or other vegetable fiber, not including stockings, hose, or half hose, costing not more than \$2 per dozen, 50 cents per dozen, and in addition thereto 35 per centum ad valorem; costing more than \$2 per dozen, 50 cents per dozen, and in addition thereto 50 per centum ad valorem.

The importations of fashioned hosiery for the year ending June 30, 1896, were in value \$5,605,241.48. If the importations for the different years under the Wilson, McKinley, and previous tariffs are compared with 1896, it will be found that the variation in value from year to year is very small. In round figures, the importations each year have been about \$5,000,000, occasionally falling off or increasing by a prospective lowering or raising of duties. This proves conclusively that raising or lowering duties has not changed the amount of goods imported, but has simply meant a loss of revenue to the Government when the duty has been lowered, and also shows that we have never had protection enough to encourage the manufacture to any extent of fashioned goods here.

We are anxious and able to make the better class of goods, but are unable to do so for the sole reason that the cost of labor is so much higher in this country than in Germany that under no tariff thus far have we been able to produce goods successfully in competition with foreign manufacturers. While there has undoubtedly been some undervaluation, we know that the main difficulty is in the low cost of German labor.

At present we are driven into a corner all huddled together making cheap stuff, and we ask in simple justice that we be permitted to extend our manufacture to the better grade. This will relieve the overcrowding in low-priced goods and help every one of our 900 different manufacturers of hosiery.

We again refer to the figures showing the large importations, amounting in 1896 to over one-sixth of the entire cotton schedule, and ask that it should be constantly borne in mind, because it proves beyond a question the truth of all we claim. When it is considered how small in value is hosiery as compared with other cotton goods used, how apparent it is that all other kinds of cotton goods are protected better than ours.

## SHIRTS AND DRAWERS.

The importations of shirts and drawers were for the year ending June 30, 1896, in value \$523,403.08. This includes all grades of both cut and fashioned goods. As the figures show, the importations of foreign goods have not been as large as hosiery. On certain classes of goods, however, we have felt keenly the foreign competition, particularly on ladies' ribbed goods, which have been interfered with seriously.

With the intention of being moderate, and asking for only what we believe to be needed, we have made much lower rates for shirts and drawers than most of those that prevailed under the McKinley bill. The duties asked for we believe to be fair, and will be fully needed to hold the importations where they are.

The fashioned shirts and drawers, which pay the highest rate of duty, require by far the greatest amount of labor. They are used only by a class of consumers who insist upon having the best obtainable, irrespective of cost, and the increase in duty will add to the revenue of the Government and at the same time, we hope, permit our own manufacturers to obtain a share of this trade.

The facts given and the recommendations made will, we believe, be indorsed by the great majority of hosiery and shirt and drawers manufacturers.

SAMUEL TOWNSEND,  
*Chairman of Townsend & Yale.*

STATEMENT OF MR. W. H. BIYEU, REPRESENTING THE KNITTING MILLS COMPANY, OF PHILADELPHIA.

TUESDAY, *December 29, 1896.*

Mr. BIYEU said:

Mr. Chairman and gentlemen of the committee, I represent the Philadelphia Knitting Mills Company, an institution which was started in the manufacturing of the finest goods in this country, about on the same basis as Mr. Talcott's, of the American Hosiery Company, both in cottons, silks, and lisle, all fashioned goods. I do not know that I can add any more at the present time to what has been said by Mr. Talcott until we get together and formulate our ideas. We have no special organization, and we want to see one another and make up our per cent, and we will submit it in writing.

The CHAIRMAN. That will be sufficient.

## COTTON SUSPENDERS.

(Paragraph 263.)

## FORTY PER CENTUM WOULD BE THE PROPER TARIFF.

PHILADELPHIA, *December 14, 1896.*

DEAR SIR: In the original Wilson bill it was proposed to make the duty on cotton suspenders 35 per cent; this rate was changed in the Senate to 45 per cent, with the understanding that when the bill was taken into conference the rate would probably be made 40 per cent, and that was what the rate had been under the original McKinley tariff

bill. We feel confident that Major McKinley would not want the tariff on our goods, the Guyot hygienic suspender, higher than 40 per cent, for the reason that they are not made in this country at all, and it always was Mr. McKinley's idea not to put any exorbitant tariff on articles which could not be made in this country. The reason these suspenders can not be made in this country is that the yarn can only be spun in France, and they have been made by the same family for so many years that they have arrived at a state of perfection which can not be excelled.

Our idea is that 40 per cent would be the right tariff on these goods, for the reason that they should be within the reach of almost every man.

They retail in this country at 50 cents per pair, and at a tariff of 40 per cent this can be continued, but if it is made any higher the price would have to go up, and no domestic manufacturer would be benefited, because these goods can not possibly be made here, as we said before, owing to the fact that the yarn can not be spun here.

OSTHEIMER BROS.

## SHOE AND CORSET LACINGS AND BRAIDS.

(Paragraph 263.)

### A COMPOUND DUTY RECOMMENDED.

ANSONIA, CONN., *December 14, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We have about 2,000 machines in good running order on shoe and corset laces and braids. We think there should be a duty of 10 cents per pound, and 35 per cent ad valorem, when made of unglazed cotton yarns. When made of glazed or in part of glazed, there should be a duty of 35 cents per pound, and 35 per cent ad valorem. We presume there should be a similar duty when composed partly of rubber, even when the yarn used is unglazed, but we are not largely interested in the matter. The same also of silk and mohair.

Respectfully,

ANSONIA O. AND C. Co.,  
By W. F. OSBORNE.

## BRAIDS OF COTTON, SILK, ETC.

(Paragraph 263.)

### A COMPENSATORY COMPOUND DUTY NECESSARY.

NEW YORK, *December 28, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We, the Braid Manufacturers' Association of the United States, respectfully represent to your honorable body the necessity for revision of the tariff affecting braids manufactured of cotton, Schedule I; silk, Schedule L; wool, Schedule K; metal, Schedule C; braid buttons, Schedule N.

As yarns form our raw material in the manufacture of braids, a sufficient difference should exist between the rates of duty that are levied

on our raw materials and the finished product of the braiding machine. In order to have adequate protection on all our manufactures, it would be necessary to have the rates on braids, in all above schedules, exceed those on yarns by not less than the rates levied on braids exceeded those on yarns in Schedule K of the tariff of 1890. We are in favor of a compound duty.

THE BRAID MANUFACTURERS' ASSOCIATION  
OF THE UNITED STATES.

HENRY W. SCHLOSS, *Chairman*,  
R. W. STRASSBERGER, *Vice-President*,  
FRED A. KURSHEEDT, *Treasurer*,  
A. S. WAITZFELDER, *Secretary*,  
*Committee.*

## ELASTIC AND NONELASTIC WEBBING.

(Paragraph 263.)

### SCHEDULE AND RATES RECOMMENDED.

Mr. Russell (Connecticut), of the committee, presented statement from Mr. W. S. Osborne, of the Ansonia O. & C. Co., of Ansonia, Conn., manufacturers of suspenders, skirts, and corset materials, as follows:

We would like inclosed, or its equivalent, in the new tariff bill:

As cloth is a web, but not so called in trade, we have introduced as a definition for our purposes goods made on looms adapted to weaving less than 12 inches in width. This is arbitrary, and the party who formulates the clauses can vary it, but there should be some limit, and we think this as good as any, just as twenty-one years is as good an age for voters as any other. The page inclosed covers all webbing of every name and nature, elastic and nonelastic, and is so drawn as to cover many loopholes in previous tariffs. It is not designed to prohibit importations, but to help our market to some extent.

Nonelastic ribbons, banding, beltings, gimp, galloons, gorings, hat trimmings, surcingle web and webbing, by whatever name known, woven on narrow-fabric looms or machines best adapted to weaving goods of less than 12 inches in width; also, nonelastic cords, braids, boot, shoe, and corset lacing, of which the principal material used in their manufacture is not more costly than cotton yarns, 10 cents per pound and 35 per cent ad valorem.

When composed wholly or in part of glazed cotton yarns, mohair, worsted, wool, or any material more costly than cotton yarns and other than silk or imitations of silk, 35 cents per pound and 35 per cent ad valorem.

When composed wholly or in part of silk or imitations of silk, or of material not otherwise specified, 50 cents per pound and 50 per cent ad valorem.

An additional 25 cents per pound to all the above when composed in whole or in part of rubber, gutta-percha, wire springs, or any other elastic substances.

## COTTON DAMASK.

(Paragraph 264.)

### THE RATES OF 1890 WERE NOT PROHIBITIVE.

NICETOWN, PHILADELPHIA, *December 26, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We write you in reference to the proposed revision of the present tariff, and particularly in regard to our product of turkey red damask, which is included in the Schedule I, bearing 35 per cent duty.

We would refer you to the letter replying to the Hon. D. W. Voorhees's circular of December 20, 1893, asking for detailed information for the use of the Committee on Finance of United States Senate. This letter is printed in Bulletin No. 46, Committee on Finance, Fifty-third Congress, second session, as No. 5588.\* The conditions are about the same now as then. Our prices, owing to the extreme dullness of the last two years, are less than 30 cents. The cost of labor is about the same.

We would ask for a restoration of the rate of 40 per cent, which was the rate in the bill of 1890, and was so far from having been prohibitory that the importations of these goods for 1890, 1891, and 1892 doubled each year on the importations of the year previous.

BRADBURY BROS.

### LOOMS THAT ARE IDLE.

PHILADELPHIA, PA., *January 4, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

About five years ago the McKinley tariff encouraged us to put in a section of wide looms for the manufacture of red damask tablecloth. For a year or eighteen months we had orders for all we could make at 27½ cents per yard.

---

\* Our product is turkey-red damask, used for table covers and classified as cotton damask in the custom schedules, bearing 40 per cent duty.

Our production in 1881 was \$40,000, and in 1892 its value was \$140,000.

For the last five years we have run steadily sixty hours per week, until last June, when we closed our mill, and, with the exception of our running 20 per cent of our machinery forty hours per week during last December, we have been standing idle since. Our class of goods is used largely by the working people, and being thrown out of work they have used what money they had or could get for food and clothing, and tablecloths became luxuries and their sale stopped.

The present rate of duty (40 per cent) is, we think, low.

Sixty per cent of our cost is labor, for which foreign manufacturers pay less than half the rates we do, and as many other items of cost also favor them they can pay the 40 per cent and still compete with us. In fact, the keenest competitors we have are the importers, and the domestic manufacturers are also rapidly improving and cheapening their goods.

A reduction of one-third in the duty would amount to 3 cents per yard on our goods, and could only be met by a reduction of 20 per cent in wages.

Our raw material is cotton, now free; and half of the drugs we use in dyeing are also free. The balance of the drugs if made free of present duties (averaging 50 per cent) would save us less than 1 per cent of our cost of goods.

The present graded duties seem to us fair, giving the greater protection to the goods requiring the greater labor cost.

In 1884 our price was 38 cents; 1890, 38 cents; 1892, 36 cents; at present, 33¼ cents; in each case with a discount of 7 per cent.

None of our goods are exported.

We pay 6 per cent for money.

We do not think the cost of living has varied since 1884.

Wages have decreased since last June.

Immigration gives us a great deal of skilled labor. In fact, the best of our help, with few exceptions, is from Scotland and Germany. Ninety-five per cent of our labor is skilled.

We employ 60 men, at from \$10 to \$18 per week; 83 women, \$6.50 to \$10 per week; 7 boys, \$4, and 7 girls, \$3.50 per week.

Our cost of manufacture has decreased since 1883. The exact extent of the decrease we can not give. We pay about 10 per cent less for cotton yarn, and have reduced the labor cost by improvements in system and machinery. All mill supplies have decreased in price.

Our selling price decreased 5 per cent in 1892 and 7 per cent more in last November. We think the tariff discussion and fears of great changes in rates of duties is the cause of the business depression. If Congress would abandon tariff revision, we think business would slowly get back to its condition of 1892.

This price gave us a fair profit for the capital invested, but just as soon as the agitation about the Wilson tariff arose these goods dropped in price from 27½ to 18 cents, making the price far below what they can be produced for in this country, and on this account our looms have been idle ever since, and we are not alone on these goods. We were glad to hear that Bradbury Bros., of Germantown, brought this article before the committee when you were considering the cotton schedule. We know of no article that has been so much affected by the Wilson tariff bill as this has been, and we do hope and pray that you will endeavor to have the same duty placed on these goods that the McKinley tariff had.

PORTER & DICKEY.

### SAFETY FUSE.

(Paragraph 264.)

#### A SPECIFIC DUTY NOT LESS THAN NINE CENTS A POUND ASKED.

##### COMMITTEE ON WAYS AND MEANS:

The undersigned manufacturers of safety fuse, doing business in Connecticut, New York, Michigan, and California, beg to present the following facts that can be proved:

A member of one of these companies visited Europe this last summer for the purpose of ascertaining as to the manufacture of safety fuse and its costs, and the advantages of Europe over our country.

|                                          | Ger-<br>many. | United<br>States. | Greater<br>here than<br>in<br>Europe. |
|------------------------------------------|---------------|-------------------|---------------------------------------|
|                                          |               |                   | <i>Per cent.</i>                      |
| First, labor per day, women.....         | \$0. 24       | \$1. 50           | 500                                   |
| labor per day, men .....                 | . 50          | 2. 00             | 300                                   |
| Second, fine cotton yarn, per pound..... | . 12          | 2. 20             | 66                                    |
| Third, fine jute yarn, per pound.....    | . 05          | . 06½             | 30                                    |
| Fourth, cotton cloth, per yard.....      | . 04½         | . 04½             | .....                                 |
| Fifth, powder, per keg.....              | 2. 00         | 4. 50             | 125                                   |

Under Schedule I, paragraph 264, the present duty on safety fuse is 35 per cent ad valorem, which would equal 8 cents per pound, net weight. We are opposed to ad valorem duties, on account of the premiums thus necessarily put on undervaluations, which now exist and which have seriously crippled the home establishments for the past two years. We therefore ask your honorable committee to make the duty specific, at not less than 9 cents per pound.

ENSIGN, BICKFORD & Co.,  
Simsbury, Conn.

THE CLIMAX FUSE Co.,  
No. 271 Broadway, New York, N. Y.

## EGYPTIAN COTTON.

(Free list, Paragraph 458.)

## STATEMENT OF MR. W. R. CRAIG, OF MISSISSIPPI.

TUESDAY, *December 29, 1896.*

Mr. CRAIG said:

Mr. Chairman and gentlemen of the committee, I come before you in the interest of the cotton growers of the Mississippi Valley who raise what is known as extra staple cotton. Now, the importation of Egyptian cotton comes directly into contact with that grade of cotton. The importation of it has increased very materially in the past ten years. Up to that time there is a section of Mississippi, Arkansas, Louisiana, and southern portion of Tennessee which can raise this special variety of cotton very much more profitably than they can the shorter lengths, but in the past few years the importation of Egyptian cotton has driven out this industry to a large extent, and eventually will drive it entirely out of that section, and the short growers of cotton there want this protection on this special variety of cotton, and that means a duty on Egyptian cotton.

Now, ten years ago Egyptian cotton was practically twice the value of what it is to-day, and at times in the past four years it has been very much lower than it is to-day; and the way they have of selling their cotton to the American manufacturer is, at whatever our price is, it seems they can always undersell us just enough to get their cotton in, and they are pursuing that policy from year to year and making the time on which they sell it to the American manufacturers so much more favorable than what the Southern grower is able to do that it is a great temptation to the Eastern spinner to buy it on account of the cheapness and the terms on which it is sold. Now, the product of this Egyptian and extra-staple cotton is very largely sold to the better and more well-to-do people of this country, and it all goes into fine goods, and we think it is but right that the cotton growers in that section of the South should be protected. It is one of the few industries there for which they can ask for protection, and it is one where protection can be given without any hardship to anyone, so far as I know.

The CHAIRMAN. How much more does this extra-staple cotton sell for than the other?

Mr. CRAIG. Well, sir, in the past three months—I am personally in the cotton-buying business—I have sold it for over twice the price of the ordinary cotton.

The CHAIRMAN. What is the cost of the Egyptian cotton in excess of the other?

Mr. CRAIG. Now, the cotton which comes in greatest competition with our cotton to-day sells, landed in the New England mill, at probably between 11 and 12 cents—somewhere around 11½ cents.

The CHAIRMAN. It would be something like 3 cents more than the other.

Mr. CRAIG. The corresponding grade of upland cotton grown in Georgia and Alabama would sell for about 7¾ or 7½ cents, so it is probably 4 to 5 cents a pound more. This varies, for while the cotton market has a very material effect on the price of the Egyptian and the extra staple cotton, at the same time the shorter lengths of cotton

may go down 3 cents a pound and the long lengths go up, so it is as different as though it were two separate products.

The CHAIRMAN. Does the extra staple produce such a rich, flossy gloss as the Egyptian?

Mr. CRAIG. In a great many respects the Egyptian cotton is superior to ours, and in some respects ours is superior to the Egyptian. There are very few articles made of Egyptian cotton to-day but what can be made of American staple cotton.

The CHAIRMAN. I believe it is used largely for a glossy class of goods?

Mr. CRAIG. Our staple cotton can make that as well as the Egyptian, with a very few exceptions.

The CHAIRMAN. With the same gloss?

Mr. CRAIG. It has not the peculiar silkiness, but it goes in the same goods. To show you what I mean, there are a great many spinners in Massachusetts and Rhode Island who buy, alternately, Egyptian and American cotton. Whenever the Egyptian price is so they can buy it for less, they buy the Egyptian, and whenever the American price is less they buy the American, so we are completely at the mercy of the Egyptian cotton.

The CHAIRMAN. Does it cost more to raise this extra staple cotton?

Mr. CRAIG. It does.

The CHAIRMAN. How much more?

Mr. CRAIG. Well, the percentage is considerable. In the first place, the yield to an acre is not so large as the shorter length. Then, in regard to seed cotton, it takes a larger amount of the seed cotton to make a 500-pound bale than it does of shorter lengths.

The CHAIRMAN. But, considering all things, would you say it cost 3 or 4 cents more per pound to raise?

Mr. CRAIG. Unless we are getting much larger prices than we are getting to-day and have done for the past two seasons, this section is going out of the raising of that cotton.

The CHAIRMAN. Do you get 4 cents per pound more?

Mr. CRAIG. Hardly that. Until the importation of the Egyptian cotton had grown to such a point as it has to-day there was nearly 100 per cent and some years three and four times as much of this staple grown as has been raised this year, on account of the premium not being large enough to tempt the growers to plant it; but this long staple, or extra staple, as it is commonly called, is one that we can grow considerably if protected, because we had a good many obstacles to overcome originally. In fact, there was a peculiar decay of the plant because the soil was called upon to produce a longer fiber, and it has taken six years to build up the seed to produce anywhere near what the shorter lengths would and at the same time give silkiness of fiber and strength of fiber, and in addition to the effect upon the cotton raised in the Mississippi Valley it had a depressing effect upon the sea island cotton of Georgia and Florida, because this Egyptian cotton also came in competition with the lower grades of the Florida and Georgia sea island cotton which was affected by this importation of the Egyptian.

Mr. WHEELER. What proportion of the 9,000,000 bales is of that character?

Mr. CRAIG. I should say in the Mississippi Valley, under ordinary conditions, there would be 100,000 bales of this cotton grown.

Mr. WHEELER. How much was it last year?

Mr. CRAIG. I should say last year there were 100,000 bales of it. I should say in the Mississippi Valley this year there were 100,000 bales of that cotton grown that came directly in contact with the Egyptian.

The CHAIRMAN. That is, you estimate the production of that class of cotton in this country at 100,000 bales?

Mr. CRAIG. Yes, sir; but what the product of the Georgia and Florida sea islands is I do not know.

Mr. WHEELER. What was the importation of this class of cotton from Egypt last year?

Mr. CRAIG. The cotton season is reckoned from September 1 to September 1, and there was shipped from Alexandria, Egypt, into this country last year 59,339 bales.

Mr. WHEELER. Those bales average about 400 pounds each?

Mr. CRAIG. I will explain that point in a moment when I get through. This is from the port of Alexandria, but how much came from Liverpool shipped from Alexandria, and from other ports, I do not know.

Mr. DALZELL. Have you the amount shipped the year before?

Mr. CRAIG. No; but I know it was very much larger the year before. That is my impression.

Mr. EVANS. That is, it was larger of the Egyptian cotton?

Mr. CRAIG. Yes, sir; that is, due to the depression in this country the American spinners had not the demand for the finer goods and consequently did not buy the cotton to go into it.

Mr. WHEELER. Does any of this cotton called "Nankin," which I presume is China cotton, come in competition?

Mr. CRAIG. No, sir; it comes somewhere else.

The CHAIRMAN. Sea-island cotton is finer and more valuable than the Egyptian?

Mr. CRAIG. Yes, sir. It goes into a grade of very fine numbers. Now, in regard to the number of pounds in the Egyptian bales, we do not know just why they make their bales so much heavier than we make ours in this country. Now, the South is pretty fairly well up in the handling of cotton, as they raise a lot of it—about three-fourths of the entire product of the world, I believe—and, personally, I do not see any advantage in making the bales so heavy, except to escape the notice of the legislators of this country in importing it here, because their bales are 50 per cent heavier than ours (they average 750 pounds), and they have made the terms on which they sell it and everything about as favorable as possible to the American spinner, and they come in here and sell it. They have left nothing undone to introduce this cotton to the American spinner. They have sold on terms that have been surprising in some instances.

The CHAIRMAN. This is from the official statistics in regard to the importation of Egyptian cotton into this country in the last fiscal year, ending June 30, which amounts to 43,574,769 pounds, valued at \$5,109,000. The valuation seems to be 12 cents a pound for the Egyptian cotton?

Mr. CRAIG. Yes. I figured on this Alexandria importation, and I am not positive whether that includes—different lines of firms import Egyptian cotton, and that is what I have from Alexandria, but whether that includes cotton shipped to those firms at Liverpool or elsewhere I can not say.

The CHAIRMAN. This includes all the Egyptian cotton.

Mr. RUSSELL. Do you know the relative cost of producing the Egyptian cotton and your staple cotton?

Mr. CRAIG. From what I know of the raising of the short and staple cotton, the Egyptian cotton must be made at a profit to someone.

Mr. RUSSELL. What is the relative cost and profit?

Mr. CRAIG. They raise it, I understand, with almost pauper labor. They do not have a great many of the things to contend with that we have. They do not have the grass—that is, they do it entirely with

inundation, and they have no rains to contend with, and one of the most expensive things in the cotton crop is to keep the grass down until the plant has grown so high it does not make any difference.

Mr. RUSSELL. The difference in cost is the difference in labor?

Mr. CRAIG. Yes, sir.

Mr. RUSSELL. You want protection in this to protect the labor?

Mr. CRAIG. If we can get this industry to such a point where we can perfect it so we can raise it as profitably—that is, get as great amount for the same lint as we now do on the shorter cotton—we would not ask any protection, because I do not know a country which can raise cotton as cheaply as the South.

The CHAIRMAN. Do you know, as a matter of fact, your extra staple cotton can produce goods of about the glossiness and silkiness as those made of Egyptian cotton?

Mr. CRAIG. I know of those interested in the importation of Egyptian cotton who have asked every spinner with whom they have had anything to do for a good many years if he was willing to see a duty put upon Egyptian cotton, and with one single exception they all said they did not.

Mr. WHEELER. Twelve years ago I was informed that the rent of the best Egyptian land was \$35 per acre, and that that land belonged to the Government. Is it that high now?

Mr. CRAIG. I don't know. That price would be exorbitant.

Mr. WHEELER. My information came from Colonel Lockett, who was at that time on the staff of the Khedive.

Mr. CRAIG. The land on which this cotton is raised in the Mississippi Valley can be bought for \$35 per acre.

Mr. EVANS. Is the exportation of cotton from Egypt done on the part of the Government or private individuals?

Mr. CRAIG. It is done by cotton firms.

Mr. DALZELL. What is your suggestion as to protection?

Mr. CRAIG. We want moderate protection, but at the same time enough to protect. I believe that I am not alone in thinking that the correct duty should be 3 cents per pound specific. An ad valorem duty would not amount to anything, because it requires experts, and an ordinary person does not know the value of this cotton, unless it is a specific duty. That is the only way we can accomplish anything.

Mr. WHEELER. Is it not true that the seed of this character of cotton determines the character of the product?

Mr. CRAIG. Exactly.

Mr. WHEELER. You say it does not make so much per acre, but the seed is not so expensive.

Mr. CRAIG. No, sir; the seed, in some instances, where a man has a peculiar variety, will give the same yield per acre, and yet this cotton of peculiar length of staple, this special variety, would not bring more as a growing seed, especially not after it gets scattered in a year or two.

Mr. WHEELER. Do you not know that in 1846 we had a high duty and it was contended at that time that if we took off the duty cotton would fall in price, and do you not know that the moment the duty was taken off cotton rose in price until 1860?

Mr. CRAIG. That had nothing to do with it, because in those days there were not enough mills using any of this Egyptian cotton. The larger percentage of the mills to-day are being built to spin this character of cotton. It is an industry that has a bright future.

Mr. WHEELER. Where are you located?

Mr. CRAIG. At Vicksburg and Yazoo City, Miss. This cotton can be

raised in Mississippi, Arkansas, Tennessee, Louisiana, and in the northern portion of Texas.

Mr. WHEELER. It can not be raised in the bottoms?

Mr. CRAIG. Not of the proper fiber: It is weakened and makes it poor in spinning qualities.

Mr. McMILLIN. You have spoken of the superior weight of the seed of this class of cotton. What amount of lint would be made per acre of the two kinds of cotton—the ordinary cotton and this raised in alluvial bottoms?

Mr. CRAIG. The lint per acre, I believe, in an entire crop of the Mississippi Valley would be 250 to 300 pounds. Of this superior quality—extra staple—it would not be more than 25 to 40 per cent, varying in different years. Some years it is nearly as good as the shorter length, but for an average of five to ten years it would be 25 to 40 per cent less.

Mr. McMILLIN. It would be 60 to 75 per cent of the ordinary web of this staple cotton?

Mr. CRAIG. Yes, sir. It also requires considerable more labor to cultivate it.

Mr. McMILLIN. Wherein does the difference consist in cultivation?

Mr. CRAIG. It requires more attention and is raised on the very best land. The principal labor is in picking, which is one of the most expensive processes. If they pick it roughly and get the leaves into it, it destroys its value. It must be picked more carefully.

The CHAIRMAN. The market value you say is four cents per pound greater?

Mr. CRAIG. From four cents up to twice its value.

The CHAIRMAN. Would not this make goods as smooth as any other kind?

Mr. CRAIG. No, sir; five years ago the difference between the two was probably greater than ever before. In the spring of 1892 extra staple was probably higher than it had ever been, and these States which I have mentioned had an enormous crop of this extra staple cotton. The factories in New England would have spun this crop but for the importation of Egyptian cotton. It sent the price down to such an extent that in 1893 the Mississippi Valley practically abandoned the raising of extra staple cotton, because there was so much more trouble in raising it, and the yield was so much less than that of the shorter cotton. They lost thousands of dollars in that district. Some people say that they can never begin it again unless the price is better.

Mr. RUSSELL. You spoke of the Sea Island cotton. Tell us about the quality of that cotton.

Mr. CRAIG. Florida and Georgia Sea Island cotton is inferior in quality, and the best Egyptian cotton will go into finer classes of work than the lowest Florida and Georgia Sea Island. The Georgia and Florida Sea Island cotton is now at a point at which they can buy Egyptian cotton for less, so that they have stopped buying Georgia cotton and have begun to buy Egyptian, which leaves this surplus cotton in the hands of holders in Georgia, which they must sell at the Egyptian price, whereas if the Egyptian had this duty to pay it would be kept out. In Florida they work a little better.

Mr. RUSSELL. You advocate this protection because you think it is better for the general cotton-raising industry of the South?

Mr. CRAIG. I think so, and that it will be the means of making every part of the South yield a better class of cotton, and in a number of ways will benefit the South.

Mr. RUSSELL. Do you think that is the sentiment of the people of the South?

Mr. CRAIG. I think nobody could have the slightest objection to it.

Mr. EVANS. Where are the highest grades of Sea Island cotton raised?

Mr. CRAIG. Near Charleston, S. C.

Mr. PAYNE. Has not the importation of cotton increased rapidly in the last half dozen years?

Mr. CRAIG. Yes, sir; and it will increase faster in the next five years.

**STATEMENT OF MR. C. P. BAKER, OF THE LAWRENCE MANUFACTURING COMPANY, LOWELL, MASSACHUSETTS.**

Mr. BAKER said:

Mr. Chairman and gentlemen of the committee, I do not come prepared to make any argument upon this question, because as a manufacturer of hosiery I did not expect the matter to come up. I can, however, give some facts in relation to the class of work we do and the cotton we use which may be of some interest to the committee. I will first say that at the present time there is a difference in value of 1 cent per pound between the Egyptian grade of cotton and the American cotton, which comes into competition with it in my work.

The CHAIRMAN. You refer to the extra staple?

Mr. BAKER. I refer to the extra staple, which I buy from Vicksburg, and I think that is the cotton referred to. I have to-day to pay 9½ cents per pound for it. I have to buy Egyptian cotton for some purposes, and I am paying for it to-day 10½ cents per pound. The difference in price which exists at the present time does not always remain the same, but varies materially from year to year. For our purpose we buy Egyptian cotton at 1½ cents per pound higher than the American cotton that we use, and we use it in preference to the American cotton for the reason that there is more waste in the American than in the Egyptian.

Mr. WHEELER. Do you refer to the price in Egypt?

Mr. BAKER. We buy the whole of our American and Egyptian cotton landed in Boston. I will also say that it can not be used always for the same purposes. There must be a certain amount of Egyptian cotton used, and will be used any way. The American can not take the place of it, because we make some classes of goods which can not be colored. The Egyptian cotton is a yellowish-brown cotton. It has a peculiar soft finish which can not be gotten from the American cotton. The amount of Egyptian cotton used has undoubtedly been increasing to some extent, but not largely. I have not the figures, but I think the amount used is about 50,000 bales of 750 pounds to the bale, which weight is 50 per cent more than the weight of the American bale. The principal advantage in using it is that there is less waste in it than there is in the American cotton, and therefore it has more spinning value, which accounts for that difference in price to quite an extent.

Mr. WHEELER. Is it compressed?

Mr. BAKER. It is compressed more than the American cotton, and it is put up in better shape. The bales coming from Alexandria are almost as perfect in appearance as if they were bales of goods, while the American comes in in a shabby condition—bales with hoops off, the ties cut, and the cotton streaming out. They are using a better packing over there by putting on 20 light bands, making it very compact. Besides that, we buy it net weight, 21 pounds actual weight being allowed for bands and ties, whereas we buy the American cotton with the bands and ties on.

Mr. WHEELER. What proportion of the Egyptian crop of 59,000 bales comes to America?

Mr. BAKER. I think it is about one-sixth, but I am not quite sure about that.

Mr. WHEELER. Where is it distributed?

Mr. BAKER. In New England. I think the expense of raising the Egyptian crop is in the cost of irrigation. The cotton-raising district in Egypt is cut up into small farms, and they have to take water from the river Nile for the whole work. The land has to be irrigated most expensively.

Mr. WHEELER. Is that land all under the Government system?

Mr. BAKER. It is all under the Government system.

Mr. EVANS. Do you know whether the \$35 per acre includes the privileges of irrigation?

Mr. BAKER. I do not know. I think they hire the water every year.

Mr. EVANS. Does the Government furnish the irrigation as well as the land?

Mr. BAKER. I don't know. It has furnished irrigation, but I don't know about the land.

The CHAIRMAN. The Government makes a charge for it to the occupant?

Mr. BAKER. Yes, sir.

Mr. WHEELER. You don't recommend anything.

Mr. BAKER. I only spoke for the committee's information in regard to the difference in cost. It was represented that there was a difference of four cents in cost, and that is not so. I have bought it year in and year out, and I know.

Mr. WHEELER. You think the South would be selling its birthright for a mess of pottage to ask for this tariff?

Mr. BAKER. I do not want to judge of that question.

## THE MEMPHIS, TENN., COTTON EXCHANGE ASKS FOR PROTECTION.

MEMPHIS, TENN., *January 9, 1897.*

### COMMITTEE ON WAYS AND MEANS:

At a recent meeting of the board of directors of the Memphis Cotton Exchange it was the unanimous action of the board to indorse the movement inaugurated by the cotton producers of the South looking to the collection of a duty by the National Government on Egyptian cotton imported into this country, and the secretary was instructed to write our Senators and Representatives in Congress, urging upon them to favor a duty of 3 cents per pound on all importations of Egyptian cotton. In compliance with this request, your attention is respectfully drawn to this subject, and your favorable consideration is requested.

That the importations of Egyptian cotton have greatly increased from year to year and supplanted the use of our staple cottons you will note from the recent statistics supplied from the office of the Secretary of the Treasury, as follows:

#### IMPORTS.

|              | Bales. |              | Bales. |
|--------------|--------|--------------|--------|
| 1889-90..... | 10,470 | 1893-94..... | 33,605 |
| 1890-91..... | 23,790 | 1894-95..... | 59,418 |
| 1891-92..... | 27,739 | 1895-96..... | 69,220 |
| 1892-93..... | 42,475 |              |        |

A total for the past seven years of 266,718 bales, equivalent to 373,505 bales American cotton of 500 pounds each. Importations of Egyptian cotton for this season are estimated at 85,000 bales, equivalent to 119,000 bales of American cotton. These large importations of Egyptian cotton are replacing the staple cotton of this country, and depreciating its value until there is but a small margin of profit in its cultivation.

HENRY HOTTER, *Secretary.*

---

## FLORIDA WANTS A PROHIBITIVE DUTY ON EGYPTIAN COTTON.

GAINESVILLE, FLA., *December 29, 1896.*

### COMMITTEE ON WAYS AND MEANS:

Feeling a deep interest in the stability and success of the farming industries of the South, especially in the States of South Carolina, Georgia, Florida, and Texas, and with a strong desire to see the protective policy of the Government over home productions extended to the States named above, I call your attention to the following facts, which should be considered and acted upon at the present session of Congress, while the committee is engaged in reconstructing the tariff.

Long staple, or, as it is more commonly called, Sea-Island cotton, is produced on the coasts and islands of South Carolina and Georgia, and largely in the southern counties of Georgia, and is the only cotton grown in Florida. In Texas its culture, until recently, was confined to Montgomery County, but this year the area of cultivation has been enlarged.

These States jointly produced last year about 90,000 bales, averaging 350 pounds each. This class of cotton enters largely in the manufacture of the finest qualities of cotton fabrics and sewing threads in the factories of the Eastern and Middle States, whose capacity for consumption of this quality of cotton about equals the amount produced by the States named.

During the present year the acreage of cotton was largely increased in southern Georgia and Florida. In the latter State many of the orange groves destroyed by the freeze of two years ago have been utilized in cotton culture.

Greater care has also been exercised by the planters in selecting improved seed from the best grades of the staple grown on the sea islands of South Carolina, with the hope of realizing higher prices for finer qualities of cotton.

It is a well-known fact that the sea islands of South Carolina and Georgia are the habitat of the high-priced grades of long cotton, which have no rivals for fineness of lint and length and strength of fiber in this or any other cotton-producing country.

It is also a fact that with all the care which the planter may bestow upon a crop, grown from imported seed, directly from the sea islands, it will degenerate into a less valuable grade the first year in southern Georgia and Florida, and continue to deteriorate each succeeding year. Hence the necessity of importing fresh supplies of fine seed annually to make the culture profitable.

The ranging prices of our long staple cotton vary from 14 cents to 21 cents at the Eastern mills. The price paid for labor on the cotton farms varies from 30 cents to 75 cents per day. The acreage allotted to one plowman and two hoe hands is 20 acres of cotton and 10 acres of corn.

The labor on a cotton farm begins in February and ends in December. The actual cultivation ceases about the middle of July; the remainder of the time covers the picking season.

The yield of seed cotton to the acre varies, according to the strength and adaptation of the soil, from 200 to 1,000 pounds. This last quantity is rarely produced; the greatest average seldom reaches 500 pounds. It usually takes from  $3\frac{1}{2}$  to  $4\frac{1}{2}$  pounds of seed cotton to one of lint.

You will readily see that to make the culture of this variety of cotton profitable the farmer is forced to avail himself of the cheap labor of women and children and should receive not less than 18 cents per pound for his lint. This year the price of long cotton has been far below the average of previous years.

The cause of the low prices for our long staple cotton is the direct result of the large supply of the same class of cotton (comparing well with our medium grades) raised in Egypt at nominal cost of production and thrust upon our markets by cheaper transportation, in quantities more than sufficient for the consumption of our mills when running on full time.

The freight charged on bale cotton from this point (Gainesville, Fla.,) to Holyoke, Mass., is 71 cents per hundred pounds. This added to the cost of production enables Egypt to crowd our cottons out of the markets, or force us to sell at their figures, from 11 to 13 cents.

At the opening of the market this year it was estimated that Egypt would furnish 125,000 bales to our mills against 75,000 furnished last year. From the facts above presented you can readily see that, if the growers of long staple cotton in the States above named are not protected by a tariff duty upon Egyptian cotton of 4 or 5 cents per pound, that industry must languish, if not cease altogether in those States.

The reasons are far more cogent for a tariff duty on Egyptian cotton than they are for a duty on wool as far as relative costs of production are concerned.

Long staple cotton must, in the near future, become the leading staple product of the States named. High freight rates on all early vegetables to Northern and Eastern markets are fast driving that industry to the wall and the increase of acreage for cotton will soon be an inevitable result.

A tariff duty sufficiently high to drive Egypt out of competition with us in our own markets is the only road open to the prosperity of our farmers. The high freight rates on vegetables and cotton to our markets and the competition with cheap foreign labor, freight, and cotton puts our farmers between "the devil and the deep sea."

As it is in the interest of the farmers of South Carolina, Georgia, Florida, and Texas to secure protection against the Egyptian cotton, the Congressmen of these States respectively should hasten to support a measure so beneficial in its objects to their constituencies, though not fully in accord with their political convictions.

GEO. J. ARNOW.

### EGYPTIAN COTTON ABSOLUTELY NECESSARY.

BOSTON, MASS., *January 5, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

I wish to say that I have used Egyptian cotton for thirty years and to protest against its exclusion or a duty on it. For certain hosiery and other goods its natural color is important, and for fine yarns it is

much needed. It does not equal or take the place of sea island cotton, but the long-staple cotton ( $1\frac{1}{4}$  to  $1\frac{1}{2}$  inches long) of the Mississippi Valley is often of very defective growth, and in some seasons the  $1\frac{1}{2}$ -inch cotton hardly exists. The Egyptian cotton is better grown, of more uniform fiber, and is much better packed. I have often turned from the American to Egyptian cotton when the American crop failed to give the cotton needed in strength and quality, and then changed back again when a better season gave a good American growth. We need this cotton in making the fine yarns in competition with English and Continental spinners.

ARTHUR LYMAN,  
*President Hadley Co.*

SCHEDULE J.

---

FLAX, HEMP, AND JUTE, AND  
MANUFACTURES OF.

---

---

## Schedule J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

### AMERICAN FIBER INTERESTS.

Free list, paragraph 497.—Istle or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, flax straw, flax not hackled, tow of flax or hemp, hemp not hackled, hemp, flax, jute, and tow wastes, and all other textile grasses or fibrous vegetable substances, unmanufactured or undressed, not specially provided for in this act.

### MEMORIAL SUBMITTED BY THE NATIONAL VEGETABLE FIBER PRODUCERS' ASSOCIATION

MINNEAPOLIS, MINN., *January 11, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

Pursuant to the organization of the National Vegetable Fiber Producers' Association, at St. Paul, Minn., January 14, 1897, this association being composed of—

Minnesota Flax Co., Minneapolis, Minn. (F. H. Warden and A. H. Swett).  
Nebraska Binder Twine Co., Fremont, Nebr. (B. W. Reynolds).  
Floyd Valley Flax Fiber Co., Sioux City, Iowa (T. P. Gere).  
Messrs. S. C. Furlow, Webber, Knowlton, and Richardson, Rochester, Minn.  
Eau Claire Linen Co., Eau Claire, Wis. (H. C. Putnam).  
Messrs. A. D. Fleming & Co., Albany, Wis. (Frank Woodhead), manufacturers of linen.  
Mrs. O. N. Olberg, Albert Lea, Minn.  
Dr. W. H. H. Dunn, Lincoln, Nebr., hemp grower.  
Dr. A. W. Thornton, West Ferndale, Wash., recently special agent Department of Agriculture.  
Prof. W. M. Hayes, agriculturist, Minnesota Experiment Station, St. Anthony Park, Minn.  
Prof. Harry Snyder, chemist, Minnesota Experiment Station, St. Anthony Park, Minn.  
Jno. Niblock, Anderson, Ind. (intermittently in flax and hemp since 1861).  
J. K. Brady, manufacturer of upholstery tow, Dodge Center, Minn.  
C. B. Eenkema, manufacturer of upholstery tow, Clara City, Minn.  
Geo. N. Lyman, jr., manufacturer of upholstery tow, Minneapolis and Fari-bault, Minn.  
John T. Smith, manufacturer of upholstery tow and hemp grower, Heron Lake, Minn.  
St. Paul Linen Works, St. Paul, Minn. (M. D. Miller).  
Moses Jerome, hemp grower, Columbus, Nebr.  
John Heaney, hemp manufacturer, Gridley, Cal.  
R. W. McRery, hemp manufacturer, Frankfort, Ky.  
W. J. Loughridge, hemp grower and manufacturer, Lexington, Ky.  
W. G. Dance, Minneapolis, Minn., farmer in North Dakota.

The purpose of this organization being to foster and promote the culture and manufacture of vegetable fibers in the United States, by individual and associate effort, and by legislative enactment or otherwise, through its executive committee, herewith submit the following:

Believing in the policy of protection to American industries, and being cognizant of the almost utter extinction of the flax and hemp fiber business (which formerly flourished largely) because they have not been properly or adequately protected against foreign fibers, which are produced either by pauper labor or labor paid in a most niggardly manner, and feeling confident that these industries will revive and be largely upbuilt if they be but given recognition in the tariff schedules to a fair extent—to the degree of equalizing the vast difference between cost of American as compared with illy paid foreign labor—we beg that your committee place flax, hemp, and all foreign fibers upon the dutiable list at the following rates:

## FLAX.

|                                             | Per pound. |
|---------------------------------------------|------------|
| Hackled flax, known as "dressed line" ..... | 5 cents.   |
| Unhackled flax .....                        | 3 cents.   |
| Hackled tows .....                          | 3 cents.   |
| All other tows .....                        | 2 cents.   |

## HEMP.

|                                             |                     |
|---------------------------------------------|---------------------|
| Hackled hemp, known as "line hemp" .....    | 2½ cents.           |
| Russian and Italian hems .....              | 1½ cents.           |
| Tow of either Russian or Italian hems ..... | $\frac{3}{4}$ cent. |
| Sisal hemp .....                            | 1¼ cents.           |
| Manila hemp .....                           | 1¼ cents.           |
| Jute .....                                  | 1¼ cents.           |
| All other fibers not herein specified ..... | 1¼ cents.           |
| Jute butts and rejections .....             | $\frac{1}{2}$ cent. |

## TOW.

|                                       |                     |
|---------------------------------------|---------------------|
| Upholsterers' tow, or flax moss ..... | $\frac{1}{2}$ cent. |
| Flax tow (paper stock) .....          | $\frac{1}{2}$ cent. |

Asking the benefit of your influence and cooperation upon the above and hoping for favorable consideration, we remain,

F. H. WARDEN,  
B. W. REYNOLDS,  
*Executive Committee,*  
*National Vegetable Fiber Producers' Association.*

## FIBER RAISING CAN BE MADE PROFITABLE.

MINNEAPOLIS, MINN., *January 7, 1897.*

## COMMITTEE ON WAYS AND MEANS:

We have found it impossible to be personally present at the hearings of your committee upon the schedule covering flax, hemp, jute, manila, and other vegetable fibers, and therefore take this late opportunity of setting before you our views upon this subject. We have established a small mill for the production of flax fiber for spinning purposes, and are using our best endeavors to educate the farmers to raise flax for this purpose and have made some material progress, but it is daily more apparent to us that there is a dire necessity for an import duty upon flax and hemp fibers and tows if we expect to live and to expand this

industry to any extent whatever. Every requisite of climate and soil is now prevalent here in Minnesota and the Northwest for the establishment of this industry upon a very large basis, and this is evidenced by the quality of product which we have already obtained, although only established a comparatively short time. Our farmers have found the raising of flax straw for fiber the best paying crop they have had this last season, but these prices which we have to pay and the cost of labor make it questionable if others will go into this business unless there is some additional incentive than the prices now obtainable in our markets, and we believe this can only be improved by adequate protection upon these fibers against foreign fibers produced by labor that costs 50 to 75 per cent less than ours.

Our flax is obtained by the expensive process of water retting, such as is followed by the Belgians, French, Irish, and other European countries who produce the highest grades of fiber. But a very serious doubt exists in our minds if we can continue to pay the cost of our labor and compete with foreign flax, unless some protection is given us by the payment of duty by this foreign flax. We think only a fair protection would be afforded our industry by a duty of 5 cents per pound on hackled flax, known as "dressed line;" and 3 cents per pound on scutched flax, known as "line" flax; and also the same upon tows, known as "hackle tows;" while other grades of tow should pay at least 2 cents per pound. Under such protection we believe that the flax and hemp industry would become a business of vast magnitude in this country, and we do not see how they can become such, until practically the above rates of duty are established. It is our opinion also that all foreign fibers including sisal and manila hemp, New Zealand flax, jute, Russian, French, Italian, Hungarian hems, and tows made from them, should all pay duty of some sort; but as to the amount of these, the writer does not feel competent to state, because of not being as intimately acquainted with those fibers as with flax and hemp. We trust, therefore, that you will give your serious consideration and cooperation along these lines, as in that way we may grow at home these valuable fibers instead of sending our money abroad for them. Were there a question of our ability to grow these fibers it might be different, but our ability to grow them is abundantly established as numerous testimonials of ours testify.

We now beg to say that the following seem to us only fair and adequate:

Hackled flax, known as "dressed line," 5 cents per pound; unhackled flax, or merely "scutched flax," 3 cents per pound; hackle tows, 3 cents per pound; all other flax tows, 2 cents per pound.

In connection with this I beg to state that we follow the extremely expensive water retting process, similar to that of Belgium, which produces the finest grades of flax, and the cost of the labor alone is 75 to 85 per cent of the amount requisite to produce the fiber. While it is true that flax may be called the "raw material" of the spinners, it is our manufactured stock, and with this heavy outlay for cost of labor, amounts named above are certainly not excessive. There is another process followed for producing flax—that followed by the Canadian mills, and Messrs. James Livingston & Co., of Yale, Mich., which is called the dew retting process, and consists of spreading the flax straw upon meadows and allowing the dews and rains to ret it—a similar process to that of producing Kentucky and other American hems. This process is considerably less expensive than the water retting process, of which we are the sole exponents in this country at this time.

I can assure you that with proper protection, a vast industry will spring up in a very short time, and our own State of Minnesota is eminently fitted to stand at the head of this list.

MINNESOTA FLAX CO.,  
F. H. WARDEN, *President*.

### JUTE A DECEPTION AND FRAUD.

NEW YORK, *December 29, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

Shoddy is wool's greatest foe and our people's worst enemy. The grinding up of old rags, ever growing weaker and nastier, drives down the price of wool and clothes us with poorer garments. It is perpetual motion. Woolgrowers keep posted on shoddy. There is no value in it, only for the selfish and greedy to deceive and swindle us with it. Shut it out.

Jute is a shoddy fiber. In report No. 8, United States Department of Agriculture, on the culture of hemp and jute in the United States, Mr. Charles Richard Dodge says (p. 7) that jute has destroyed our hemp industry; that thirty-seven years ago we produced 75,000 tons per year, and last year hardly 5,000 tons. On page 23 he says that during 1894-95 over 160,000 tons of jute fiber and butts were imported here. On page 28 he says that several American plants, called weeds, produce better fiber than jute; that jute, compared with other fibers, is very inferior; that it has little durability, can not stand dampness, and rapidly deteriorates. On page 29 he says that sooner or later its use as a cheapener will be viewed as a criminal offense.

If we need and can use cheap fibers like jute we can grow them here, and our agricultural interest will give them to us. It is bad enough to have with us poor, cheap trash, but for heaven's sake do not let the rotten, fallen, 5-cents-a-day labor of India flood us with its filth. The amount of cheap foreign fiber trash sent here is beyond finding out; it is in many things woven or spun that come here. In November, Calcutta says there is 430,000 bales of jute afloat, and of this only 22,000 bales were for the United States. But in some shape most of the balance gets here. Put a heavy specific duty on it and on everything which it is a part of. It will come in in spite of any duty you put on it, but if we must have it a heavy duty will help us to grow it here. At present it is to cotton what shoddy is to wool, and fills our houses with millions of pounds and yards of fiber trash, where good cotton should go, to be used by thrifty women for clothes and garments.

The question of a duty on jute raw material is an important one. The jute people are working to have it come in free; they say woven-cloth manufactured goods will be put upon the dutiable list. The only intelligent argument in favor of jute is that it is used for bale covering. There is no argument in favor of jute, raw, on the free list. We may have twenty mills using it. We have thousands of mills injured by it. It is made the basis of oilcloth, carpets, and drapery, and is used as cordage. It is always a cheapener, a deception, and a fraud. Please give this careful thought.

THOMAS M. LETSON.

**GOOD FIBERS CAN BE PRODUCED HERE.**ROCHESTER, MINN., *January 8, 1897.***COMMITTEE ON WAYS AND MEANS:**

We, the undersigned, being interested in the culture and manufacture of flax and flax fibers, and having investigated the possibility of building up the industry in this country, find that we have all the advantages in the way of producing the flax, but that we can not successfully compete with the cheap labor of other countries in the manufacture thereof unless we are afforded protection. We are firmly of the opinion that just as good fiber can be produced here as can be produced anywhere, but unless protection is afforded capital can not be induced to invest in the manufacture thereof on the large scale necessary to make it successful.

We therefore ask that your committee give this matter careful attention, and see that a sufficient duty is placed upon all foreign fibres, including jute, sisal, manila, Russian hemp, Italian hemp, and tows made from them, as well as flax and flax tows, but particularly upon flax and flax fibers.

We believe that if this industry is properly protected it will become one of the great industries of the Northwest.

GEORGE WEBER.

E. A. KNOWLTON.

S. C. TURLOW.

H. M. RICHARDSON.

**A PLAIN AMERICAN PAUPER.**KINSLEY, KANS., *January 7, 1897***COMMITTEE ON WAYS AND MEANS:**

I have neither power nor wealth, though I have sacrificed fifteen years of my life and almost two hands to the development of American fibers. I am to-day but a plain American pauper. I would respectfully suggest that spinners be told that American farmers and fiber producers must be as adequately protected as they. It costs more to produce one pound of fiber than it does to produce one pound of yarn.

WM. J. J. CUNNINGHAM.

**TAX ON FOREIGN FIBERS.**FREMONT, NEBR., *December 29, 1896.***COMMITTEE ON WAYS AND MEANS:**

The territory occupied by the United States of America is adapted climatically to the production of practically all the vegetable fiber required by the various demands of its people. Actual commercial experiments have demonstrated that in the southern sections of our country sisal, ramie, and jute can be successfully cultivated, while the Northern States, not excepting those where irrigation is necessary, are admirably adapted to the growth of hemp and flax.

Mr. Dodge, of the Agricultural Department, who has charge of fiber investigation, in his report says that vegetable fibers to the value of \$46,000,000 are imported annually into the United States, \$25,000,000

of which could be retained at home by the production of fibers to which our country is adapted. If, then, we can produce our own vegetable fiber in this country, the question is, Why do we not do it?

The answer to this question involves an analysis of all the facts and conditions which surround the business of fiber production, both abroad and at home. The elements of cost which enter into the production of fiber are practically the same in foreign countries as in our own, the principal item in both being that of labor. The term "labor" is one of wide signification, as applied to the fiber producer of America. It means the farmer and his hired men. They are enterprising and intelligent. Their desire is to secure a competency for old age, to give to their children the advantages of our civilization, and they demand as a reward for their labor a sufficient compensation to maintain and improve their condition.

The term labor as applied to the production of fiber in foreign countries means something entirely different from that of this country. It means in the Philippine Islands, the home of manila production, a semi-civilized native cooly; in Yucatan and the Bahamas it brings to view the degraded peon and Indian; in India, the great cesspool of disease and cheap products, where our imported jute is produced, it means a standard of living which is still desirous of feeding infants to the sacred crocodiles of the Ganges; while the labor which produces Russian and Italian hemp is even at this time affording ground for Congressional action looking to its exclusion from this country. We do not believe it necessary to quote authority in proof that the wages paid for labor in the countries mentioned—Philippine, Yucatan, Bahama, India, Russia, and Italy—are very much lower than those of the United States. We think it will be conceded that one-fourth the pay received by the labor of this country would be considered a princely pay for them.

The situation as it presents itself might be properly compared to two mighty armies standing ready to engage each other—the one civilized, enlightened, intelligent, and worthy, the other semicivilized, uncivilized, and despicable. The reward offered the victorious one is the grandest trophy of the modern commercial world, namely, the privilege of supplying the American markets.

You, gentlemen, are the commanders in chief of both these great armies of labor, and hold the balance of power which shall determine to whom the prize shall be awarded. Either one of two things must happen if fiber is produced in this country; either the wages paid these two armies must be reduced to a common level, or a tariff fortification constructed which shall exclude, except upon the payment of a tariff high enough to protect, the product of the labor of the tropics.

In arriving at a conclusion as to what the proper measure of protection is, it will assist materially the investigation if you take notice of the fact that the fiber consumers of the United States are identically those who, under proper protection, will be fiber producers. As an illustration, the farmer who now consumes binder twine produces wheat or corn, with the proceeds of which he purchases twine made of sisal or manila. Let us instance a wheat farmer who requires binder twine for his harvest. He must produce and sell of wheat enough to pay his twine bill. The more wheat he raises the more twine he uses. Suppose that instead of selling wheat to pay his twine bill he produces five acres of American hemp or flax, which is adapted to the manufacture of binder twine, the fiber of which, under protection, he could sell at a fair profit. By so doing he has accomplished a triple purpose; he

has made a profit on his fiber with which he can buy his twine; he has reduced his acreage of wheat, thereby enhancing its price, and he has further helped to retain in this country a portion of the \$30,000,000 which we are now annually sending abroad for fiber under a no-tariff schedule. In our judgment, such action as would bring about the production of domestic fibers would affect favorably a larger percentage of our people than any other one measure which Congress can enact.

In this connection we desire to quote from the report of Mr. Dodge, made to the Agricultural Department, footnote, page 66, report 1892, as follows:

It is claimed that if manila, sisal, sunn, New Zealand, and other hemp substitutes are placed upon the list of free raw materials it will be because some of the farmers in the West have demanded it, in view of the present agricultural depression, to cheapen the present cost of binder twine. No doubt, should this occur, the few manufacturing firms in the United States who produce binder twine from foreign fibers will thank these farmers who have actually aided them in the accomplishment of a much-desired object that they have been unable to bring about through their own efforts. There are many Western farmers, however, who look at this matter in its true light, as is shown by the large correspondence of the Department relating to fiber matters received since the fiber investigation began. These farmers see what is the fact—that every pound of binder twine used can be made of native-grown fibers; that the twine will be as good as the best manila, run as many feet to the pound, and can be produced at a saving of at least 4 cents a pound from the present prices. With free foreign fibers, the saving to the farmers by the removal of the duty will not be over a cent a pound, and it remains to be seen whether the farmer will get any advantage.

Mr. John Heaney, formerly of Illinois, now of California, a competent authority on fiber production, says 3,000,000 acres of land would be required to produce the fiber consumed in this country, and the question suggests itself to him, as it should to any reflective mind, Would it not be good policy when our agricultural interests are so depressed to give them the healthful stimulant which would be afforded by taking out of competition in the production of wheat, corn, oats, barley, and rye these 3,000,000 acres and produce from them fibers for our own use, as a protective tariff will do?

As stated, it has been demonstrated that all the fibers can be successfully produced in the United States. American hemp production has been carried on more extensively than any other fiber used for cordage, and its history will serve to demonstrate the effects of inimical legislation upon production and manufacture. Under a protective policy the business of producing American hemp fiber attained large proportion. In Kentucky, which has been and still is the heaviest producer, it was for many years one of the leading crops raised by the farmer. Missouri, Illinois, Indiana, Iowa in a way were large producers of hemp, and as many as 75,000 tons, or 150,000,000 pounds, were produced in a single year. Now it is the exception to meet a person outside of a few localities who knows what a hemp field is when he sees one. Think of it: A crop that should be grown as a staple all over our country has hardly a place in the list of farm products. In our State—Nebraska—there are about 4,000 acres of hemp raised, while the binder twine used by that State alone would require the product of five times that amount of land. Now, instead of producing 75,000 tons of fiber per annum, we are producing of American hemp fiber in this country about 5,000 tons. The people who formerly raised the other 70,000,000 are raising corn and other cereals that barely pay the cost of production.

The effect of taking off the tariff from fiber and reducing that on binder twine to seven-tenths of a cent a pound has completely annihilated the business of manufacturing binder twine from American hemp.

There are possibly one or two concerns making it in a small way, but their existence emphasizes how great has been the destruction wrought in the business. Factory after factory, all over the country, have been compelled to abandon the business, causing a loss of investment in plants and machinery which run into the millions. Our concern, the Nebraska Binder Twine Company, closed its twine department in 1894, and has made no twine since. But the most complete illustration of the utter impossibility of competing with foreign fiber without a tariff is afforded by the Minnesota State prison. When first they entered into the manufacture of binder twine foreign fibers were high in price and American hemp low proportionately. Accordingly, a soft fiber plant was installed and ran for several years on hemp, making excellent twine and giving good results. Gradually, however, Yucatan and Bahama, as well as Manila, had increased their production to such a point that the price of fiber declined, aided by the free-of-duty schedule, to so low a figure that American hemp could not be raised and made into binder twine in competition with it. So with convict labor, capital provided by the State, with no interest charge, and a home market the State was compelled to put in hard-fiber machinery, and, accordingly, 3,000,000 pounds of foreign sisal are used in the Minnesota prison, while the flax grower of the State feeds to stock or burns his flax straw.

With a tariff which would enable him to properly handle his flax, a paying industry would to-day be in existence in Minnesota—that of producing flax fiber for cordage and linen. And we are glad just now to be in receipt of an invitation to attend a meeting of the flax and hemp interest of Minnesota, to be held at St. Paul, January 12, 1897, which has for its purpose the determination to make itself heard on this question. The history of the prison plant at Stillwater is the history of every hemp twine factory in the country. True, hard-fiber factories have failed, but from reasons which are foreign to the subject under discussion. A stock-jobbing transaction and a legitimate business of manufacture are very distinct enterprises. We refer to the failure of the National and United States cordage companies, known as the trust. When any concern starts out to do all the business in its line done in this country, as they did, and ignore regular business methods, undertaking at the same time to control the fiber market of the world, it is very apt when brought to book to be compelled to acknowledge in the end that it has no visible means of support. The manufacturer of hard-fiber cordage as well as of soft-fiber cordage have a good right to be protected in their business, but neither has the right to say that he who produces the fiber in this country is not equally entitled to protection. Cordage is a staple commodity; it is one of the necessities of the commercial world; but the old stock argument that the country can not produce its own fiber should be discounted nowadays. The contrary is known to be true. Not alone in the manufacturing of binder twine has the free importation of fiber manifested its ruinous effects.

At one time in this nation's history—and that not more than twenty-five years ago—all the bagging used in covering the grain and cotton of this country was made from flax fiber. Thousands upon thousands of acres of flax were grown for seed and fiber by the farmer at a profit to all concerned. Now, what condition confronts the investigation? The material used for burlap, jute, is not only grown in India, but, to a great extent, the bagging used on American grain and cotton is the product of Indian looms, operated by the labor of that country. If the cotton grower believes he is discriminated against by the placing of a duty on jute let him take a few of his fertile acres from the domain

of old King Cotton and raise his own jute. He can do it successfully; experiments are in evidence to prove it, and the reports on the subject give great encouragement to the business of jute production in our Southern States. The jute imported into this country in 1895 took out \$7,000,000 of our gold, which all were trying to keep at home by putting it under bonds. Suppose we try the experiment of \$50 a ton on jute and jute butts, and keep that \$7,000,000 at home? The interest alone on the \$7,000,000 which we lose annually for jute would more than compensate the advanced price in bagging and cordage. The hemp and tows imported from Russia and Italy have also absorbed a field in the manufacture of fine twines and warps which belong to our flax and hemp growers.

In fact, the whole policy of admitting fiber free is a national business blunder. No one has been benefited, and thousands have been injured. The American has seen his job go glimmering across the waters to those people who owe allegiance to a foreign flag, who pay no taxes here, whose sympathies with our institutions are lukewarm, who love us only because we have opened our doors and invited them in to the rich feast of supplying the American market with fiber, while our own people are starving and crying for bread.

I believe that the committee should recommend a tariff of not less than \$50 per ton on every kind of fiber imported into this country.

In conclusion, we quote from a letter received by this concern from V. P. Travers, of Travers Bros. Company, New York, one of the largest consumers of American hemp in this country: "Unless Congress places a tariff on flax and hemp the business is doomed."

The Republican platform has honored hemp with special mention and promised it ample protection. It now remains for Republican Congress to fulfill the pledge.

*Secretary and Treasurer*.

### FREE FIBER BENEFITS THE FARMER.

CHICAGO, *January 5, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

We learn by the newspapers that an attempt has been made to influence your committee to recommend a duty on raw jute, flax, hemp, sisal, and manila. We have had some experience with all, and have the largest mill in the country for spinning the two last named into binder twine, of which during the last season we made more than one-third of all used in the country.

Flax we have grown experimentally and experimented with largely to find methods of quick retting by chemical or other means. The country's capacity for growing it is unlimited, and if American ingenuity could find the way of preparing the fiber cheaply no tariff would be needed to make its growth profitable; but we do not believe any practicable tariff will produce that result.

As to jute and hemp, we have a mill and a set of machinery for spinning either one into binder twine, and for awhile, by great effort, we sold the product at a price far below that of twine made from sisal and manila, but we had to abandon the manufacture from lack of demand, and to-day nothing except the failure of the supply of sisal and manilla

would induce the farmer to use either jute or hemp binder twine; that is, twines made from the so-called soft fibers.

Sisal and manila are now the only materials used for making binder twine, except a comparatively small amount of New Zealand flax that is used by certain mills to adulterate twines containing manila. The amount of binder twine used in this country is not known accurately, but it is probably about the same as that of rope, and it varies with the harvest, heaviness of straw, etc. Estimates vary from 50,000 to 60,000 tons. At the former conservative figure a duty of \$25 a ton on manila and sisal would be a tax on the farmers of \$1,250,000, to say nothing of rope, and, in our opinion, neither that nor a duty three times as high would force hemp twine on the market, and we say this with an idle mill in which we have manufactured it and in which we might begin at any time. Both binder twine and the raw material from which it is made are on the free list, and the popular demand for free twine was such that no party would dare restore the duty, and it is our opinion that no interest worthy of consideration demands a change in the law. Under it the only importations of binder twine have been from Canada, and amounted last year to less than 2 per cent of the consumption, whereas the price for twine and rope to the consumer has been lessened by the amount of duty taken off the fibers. We have never taken part ourselves in any of the various attempts to prevent the removal of the old tariff of \$25 a ton, although there were manufacturers of twine and cordage before your committee who testified that its removal would oblige them to shut their mills and move their machinery to Yucatan and cheap labor. The result predicted has not happened, but a duty on raw material and none on the manufactured goods would be an outrageous measure and shut every mill in the country without benefiting the growers of American hemp, so far as its use in binder twine is concerned; and if a duty on binder twine is impossible, certainly a tariff on the raw material is impracticable if there is any logic in a tariff law.

The manufacturers are already in competition with the "low-priced labor" of all the world, and that the price of their product is low is proved by the absence of any imports from different countries, even though water transportation is so cheap. There are twine and cordage factories enough in this country to produce three times what the consumption requires, and the competition of this number of mills—many acquired at bankrupt sale—proves further that profits must already be at a minimum.

We regret that we are unable at the moment to find any memorandum of the capacity of the Canadian mills, but the Consumers' Cordage Company, which includes only a portion of them, has, we judge, a capacity of well above 25,000 tons of twine and rope a year, and if with the other mills it is not to day equal to producing all the binder twine and cordage needed in the United States, they would be in that position very soon. At present they are protected against us by the Canadian Government tariff of  $12\frac{1}{2}$  per cent on, not the cost, nor the wholesale price of binder twine in the United States, but the country dealers' cost price.

Besides the direct increased cost to the farmer of a duty on raw material there would also be the increase caused by the larger capital required by the manufacturers, and as binder twine is done up in burlap sacks a duty on them would also add to the cost of the farmers' twine.

We trust you will pardon the length at which we have written.

Business needs a little rest from uncertainty, and nothing but the injustice that might be done if only the representatives of selfish, and in most cases unimportant, interests are to be heard would induce us to protest. Most of the statements to which our letter refers are, if correctly reported in the newspapers, ill founded or based on unjustified assumptions and assertions.

DEERING HARVESTER COMPANY,  
By CHARLES DEERING, *Secretary*.

### THE INTERESTS OF JUTE CONSUMERS.

PHILADELPHIA, *January 4, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

As to the placing of a duty on raw jute, there appears no just cause for such stand, except it be inspired by fear on the part of hemp and flax manufacturers that the granting of equitable consideration to the jute industry may work to their detriment. Surely their interests are of too much import and their mode of working too well established to be disturbed by so much cheaper a commodity as jute. It would thus appear—and this I hope never to be forced to believe—that a spirit of rivalry only can prompt such an action.

It can hardly be the object of the hemp men to foster an industry which does not exist, and by reference to Mr. Richard Dodge's recent report to the Department of Agriculture, they will see that even he (albeit the stated success on "experimental farms") points forcibly to the fact that there still remains the insurmountable obstacle of preparing the fiber to any extent at all for practical purposes.

It is thus made evident that if it be the purpose of encouraging any capitalist willing to begin jute culture on an efficient and large scale, aid must first be given to anyone capable of discovering a method of treating jute before it is delivered to the spinners.

So remote is such a success that at least until something definite has been done claiming any merit in overcoming such obstacles no tax can be imposed with any equity on raw jute, nor should the consumption of jute, which is about 100,000 bales annually in the United States, be interfered with until such a time as we are in position to compete against Hindoo labor by means of proper machinery.

All these facts, as forming a just argument against the placing of duty on raw jute, should be taken carefully into consideration, also, by the growers of hemp and flax in the United States, who will certainly grant that although their industry might be benefited in years to come, and when they are so situated as to supply hundreds of thousands of bales of their fibers to replace the enormous quantity of jute now consumed and indispensable to the American farmer as to many other industries, not until then can they argue in favor of a tax which will be a direct loss to all jute consumers. It can easily be seen that a tax on raw jute will simply enhance the cost of its various products to Americans, and that the hemp and flax men will be only helping foreign competition, as the serious evil of such a competition will be enhanced by placing importers on an advantageous footing to the extent of the duty so imposed, to remedy which an additional protection would have to be granted to counteract the unavoidable effect, an effect which hemp and flax growers and manufacturers are not in position, and will not be for many years, to avert.

The fact that jute can be grown, as stated before your committee, in

any place south of Lexington, is of no value; for, even granting this, the growing of the plant amounts to nothing for commercial purposes. "Raw jute" becomes such when only the cuttings from the plant are prepared for treatment by jute manufacturers; before then it is but a valueless stick of wood; and if millions of tons were given as a gift in such a state to the jute mills, it would prove only a costly, useless article, hardly fit for fuel, and certainly entirely devoid of its great value as containing a fiber. In a country covering such a vast area, having all changes and conditions of climate, almost any plant and tree can be made to grow and prosper; but to utilize them for their specific merit is what the political economist must establish, not to waste labor and capital. In many parts of the United States the mulberry tree grows, and acres upon acres could be made to develop it. But of what good to the United States, where we have no silkworms to feed upon its foliage? Surely the silk industry could never be benefited by simply growing the mulberry tree. The placing of a duty on raw silk from foreign countries would never make the tree more valuable to us or foster an industry which as in the case of American raw jute, does not exist.

A. V. DEE,  
*Of the Schlichter Jute Cordage Company.*

#### ADDITIONAL STATEMENT SUBMITTED BY MR. DEE IN BEHALF OF VARIOUS JUTE MILLS.

PHILADELPHIA, PA., *January 2, 1897.*

##### COMMITTEE ON WAYS AND MEANS:

The undersigned, in behalf of the Schlichter Jute Cordage Company, of Philadelphia; the Planet Mills, of Brooklyn, N. Y., and others, begs to petition that the duty on jute yarns (12 pounds to 18 pounds) be placed on a specific basis of 1½ cents per pound specific, equivalent to 35 per cent, at least, ad valorem, as under the McKinley bill. Also that the duty on jute carpets be placed at 6 cents per square yard instead of 20 per cent ad valorem, as at present.

We would also urge that burlaps be placed on the old McKinley tariff.

A. V. DEE.

#### NORTHWESTERN FLAX.

MINNEAPOLIS, MINN., *January 11, 1897.*

##### COMMITTEE ON WAYS AND MEANS:

I beg to call attention to the fact that recently in Minnesota and other Northwestern States a most promising start has been made in manufacturing flax fiber products. At least a large part of the immense amount of flax straw now wasted should be utilized. We have no infant industry which can more properly ask for at least temporary encouragement by tariff legislation. Our farmers purchase twine from abroad to bind an immense amount of flax raised for seed, whereas the flax straw would make fiber too good for binding twine, yet this straw is burned or rotted into manure. We have a few struggling, new, long-line factories, and an inspection of them last season makes me feel that this industry is worthy of general encouragement.

W. M. HAYS,  
*Professor of Agriculture in Minnesota State University.*

## HEMP.

(Paragraph 266.)

## STATEMENT OF MR. LESLIE COMBS, OF LEXINGTON, KY.

SATURDAY, *January 2, 1897.*

Mr. COMBS said: Mr. Chairman and gentlemen of the committee, previous to the passage of the McKinley bill in 1890 I was the largest grower of hemp, I think, in this country. By the passage of that bill sisal, manila, and jute, which are largely substitutes for hemp, were put upon the free list, practically destroying the profit of growing hemp, and since that time I have not grown an acre of the product. I therefore come before you to-day absolutely without any selfish interest in this matter, because my business has been so directed now that probably even if a fair protection was put upon the raw material I would not reengage in the business. But my community, my class, the farmers of Kentucky, and the agricultural laborers of Kentucky are almost dependent for reasonable compensation for their labor upon the growth of hemp, and I come before you to-day in their interest. Hemp, as it is grown in Kentucky, is almost altogether a labor crop. I suppose there is no other agricultural product the per cent of cost of which is so largely represented by labor as is hemp. Hemp, as it comes from the farmer's hands, represents at least 50 per cent of its value in a low-priced labor, and no process that is put upon it by the manufacturers, who talk about their finished goods, ever adds so much a per cent of labor as its original production puts in it.

We can not grow in Kentucky, under fair conditions of competition with the West, most of the cereals and things of that sort, and we have been forced on that account to largely direct our attention to hemp and tobacco. The result of growing hemp in Kentucky, in its effect upon the laboring class, has been this: We have there the best behaved, the most intelligent, and the most industrious colored labor that exists in the United States. When he got good prices for his labor in hemp he was the best-paid colored laborer in the United States, and it is a fact that to-day, owing to the fact there was a time when they were able to earn good wages in the production of this product, there is a larger per cent of home owners among the colored agricultural laborers of the hemp district of Kentucky than exists anywhere else in the world.

These men do not expect such wages as these other industries, whose representatives have come before you, where they talk about a \$1.25 and \$1.50 and \$2 and \$2.50 a day as remuneration; their wages have never been based upon a higher earning capacity than a \$1 a day, and with that it is uncertain employment. But it was maintained at about \$1 a day. Even in slave times the master required 100 pounds a day as a task—taking one item of it—in breaking hemp. That covered cost of food and clothing, lodging, fuel, and things of that sort, and even the slave owner paid the slave \$1 a hundred for breaking hemp in excess of this 100 pounds, while the McKinley bill and the Wilson bill have reduced the wages of the freeman to 75 cents and 80 cents a hundred for the same task that the slave owner paid \$1.

I want to state the objections as frankly as any other part of this thing, and one of the objections we met when we were asking for reasonable duties upon these substitutes—Russian and Italian hemp, sisal,

and manila and jute—was that the committee had to give cheap binder twine, and in order to give cheap binder twine they had to give free raw material to the manufacturer. Gentlemen, that idea does not any longer cut the same figure with us that it formerly did. People have found out in our part of the country that cheap buying means cheap selling, and the only people that I have met in this country for some time who want to sell dear and buy cheap have been the gentlemen who are manufacturing these goods, and who insist upon buying under free trade and selling under protection.

It only takes  $1\frac{1}{2}$  pounds of twine to bind an acre of wheat, and if you give us the duty that we think is necessary for the successful production of this crop in America it would only add about  $1\frac{1}{2}$  cents a pound to the cost of the binder twine. That would be something like  $2\frac{1}{4}$  cents per acre. Two and one-fourth cents per acre seems a very small charge against the production of wheat or any other grain.

Mr. JOHNSON. Was hemp ever used as a substitute for sisal or manila in making binding twine?

Mr. COMBS. It was not used as a substitute for sisal and manila because it is the best binder twine that is grown. Sisal and manila were used as a substitute for hemp because they were cheap.

Mr. JOHNSON. Was there a time before 1890 when hemp was cheap enough so as to be commercially used for binding twine?

Mr. COMBS. Yes; and it has the advantage over sisal and manila in that, if the grain is bound with the latter, in many parts of the country there will be occasions during an invasion of grasshoppers when the grasshoppers will feed upon this manila and sisal binding twine and destroy the work done by cheap binding twine. Hemp binding twine resists such an attack of grasshoppers, and even to this day, with the hemp binder twine selling at a very much higher price in parts of the country subject to the invasion of grasshoppers, it is bought by the farmers and the additional price paid for it in order to avoid that risk.

Mr. PAYNE. A large factory in Illinois made hemp twine exclusively, did it not?

Mr. COMBS. Yes. The industry has been entirely destroyed in Illinois, as I understand it, by the free list. They did not raise as good a quality of hemp as we did because they were unable to put satisfactory labor in it and they did not give their product the same care we gave ours. They used more machinery and produced an inferior quality, although they produced it cheaply and in large quantities. This was done both in Illinois and Nebraska, and it has been successfully produced in Minnesota and Missouri. In fact, Missouri was perhaps the first State in point of production in America. It can be grown in California.

Mr. COBB. We do not raise it at all in Missouri now. There used to be a very large crop there.

Mr. COMBS. The duty of 1861 was \$40 a ton on hemp. That lasted until 1870, when it was reduced to \$25. In 1883 it was still continued at \$25. In 1890 Russian and Italian hemp remained at \$25, but sisal and manila and jute, which are the real substitutes and the real dangers to the production of hemp and fibers in this country, were put upon the free list, and the result was what I am sure that committee had no idea of at the time when it consented to that schedule.

Mr. STEELE. The growth of flax is considered very exhausting to the soil, and I was wondering if hemp had the same objection.

Mr. COMBS. It does. You have to raise it either by a judicious course of rotation of the crop on the land or by artificial fertilizer. It can be

done completely by the artificial fertilizer of potash and nitrogen; the product can be maintained under its virgin soil condition.

I know no such protection committee as formulated the McKinley bill ever drew up that bill from an investigation in which the points of the grower of the raw material were presented to them. In fact, the grower of the raw material did not at that time even himself understand how fatal the free transportation of jute and sisal and manila would be to his interests.

I feel I owe it to my people to call the attention of this committee to the influences that were at work then to destroy our business and the influences that have been at work since, and the influences that I am warned will be brought to bear upon this committee—not only this committee but upon this Congress—in order to continue these articles upon the free list.

I am a protectionist from principle, and I shall not attempt to attack the schedules that the manufacturers have had in their interest, but I want to say this, that in 1890 there was an association in this country called the Hemp and Flax Growers and Manufacturers' Association. If there was a grower connected with it until I was invited to join it, I do not know. But I was invited to join the association. I was pleased to do it.

I came on here, and there were a hundred of us, I suppose, of which I was the only farmer or producer that I know of in the meeting. Recommendations based, I have no doubt, upon the merits of the case were made upon all lists of manufactured goods, taking several hours to consider them. When we came to the consideration of the raw material, no one made a motion to continue the tariff on raw material, until finally I suggested that the tariff of 1883 should be continued on such material. There was a pause among these growers of hemp and flax, and finally they suggested that we might imperil the whole business if we asked for too much. I thought possibly they were right, and so having voted in the affirmative I thought we should reconsider all these other schedules and come first to the raw material. But they would not favorably consider raw material, and so finally I had to withdraw from the Hemp Growers' and Manufacturers' Association.

And the result of the recommendations, or influences, or I don't know what, at that time, instead of giving us the tariff schedule of 1883 on sisal, or manila, or jute, placed those on the free list. I would not allude to that except for one purpose. When it was known that the interests of the grower and of the laborer in Kentucky were to be presented to this committee, I was notified that if I dared to even hint at a duty on jute the whole business would be knocked out; that there were powerful influences combined, and that they would see that if we made any effort whatever to put a duty on jute we would be punished for it.

I do not object to a free trader taking a position of that sort, or asking that anything or that everything should be put on the free list; but I confess, when I see those poor laborers around me, those poor negroes who are living in cabins—and they prefer to live in a hut that they own, where they are under their own roof, than to live in a good house that they do not own—when I see these poor people, living in these inferior houses, feeding upon coarse food, wearing coarse clothing, when they ask for a protection that will enable them to provide the ordinary necessities of life for their families, and when I see these rich, influential, consolidated influences thrown against them, it almost makes my blood boil.

I do not believe that these gentlemen know what they are doing. I do not believe that they realize the class of men that they are attempting to grind down into still greater depths of poverty by the recommendations which I understand from their previous course and by their threats to me they propose to secure from this protective Congress which was elected last fall. Look at our own State with regard to the protective policy. When Mr. Cleveland was elected there were 60,000 votes cast in that State adverse to the protective theory. Last fall that State cast its electoral vote for protection.

Mr. EVANS. You mean 60,000 majority?

Mr. COMBS. It was in the shape of 40,000 Democratic plurality and twenty odd thousand Populistic votes. We suffered and perhaps we deserved to suffer.

Mr. EVANS. There was a plank in the Republican platform this last year in favor of protection on hemp, was there not?

Mr. COMBS. There were only four articles that were promised specific protection in the St. Louis platform, as I recollect it—hemp, sugar, wool, and lumber.

We suffered more largely, I think, in the McKinley bill than we otherwise would have done, from the fact that Mr. Carlisle was a member of the committee at that time, and he did not believe in the principle of protection. Previously we had Mr. Beck upon this committee, and if you will follow the hemp schedule you will see that while Mr. Beck was a Democrat and a free trader he had enough of the old Scotch shrewdness and care of home to set aside mere theory, and when we came to the hemp schedule he would say, "Well, gentlemen, if we are going to have protection we will take some of it in ours." As long as he was a member of this committee the raw products fared as fairly as manufactured goods.

Mr. EVANS. Mr. Carlisle did not represent any section of country that grows hemp, did he?

Mr. COMBS. No; he was from the clay banks of the Ohio River, and they do not grow anything much in his district, except, perhaps, statesmen.

We ask, as will be shown in the schedule that will be filed, for a \$30 duty upon Russian and Italian hemp, and \$25 duty upon sisal, manila, and jute, and we are willing to concede, or rather we propose, that instead of a \$25 duty upon raw jute, you make the duty \$20 a ton, and that you will make it a crime punishable by a fine and an imprisonment to sell jute goods as American hemp goods or to color jute goods in a way to impose upon the public and make them think that they are buying American hemp goods—which are vastly superior in lasting quality and in strength of texture to these goods.

Why, gentlemen, they have no more right to bring this cheap, rotten stuff into this country and sell it for Kentucky or American hemp than they have to sell filled cheese or anything of that sort for the genuine article.

We ask that sort of a protection. We ask that our Kentucky hemp and our American hemp shall not be degraded in public estimation as to its character, as to its strength, by this dyed material. Jute is very good for some purposes, and it will be imported largely even if this duty is placed upon it.

Mr. PAYNE. Do they not use hemp in the manufacture of goods?

Mr. COMBS. Yes.

Mr. PAYNE. Don't they use it in Kentucky?

Mr. COMBS. They do not use it on farms. No, we do not use any jute on farms. We sell them straight goods.

Mr. PAYNE. You have enacted no law in Kentucky, I suppose, against that practice that you complain of?

Mr. COMBS. Oh, we have a Republican legislature now, and we will try to fix them.

Mr. PAYNE. I simply wanted to call your attention to that point as being something you might accomplish.

Mr. COMBS. I am glad to have your suggestion.

Mr. EVANS. You speak of imitation, spurious goods, etc.; please explain about that.

Mr. COMBS. I mean this jute, which is of a salmon color, is mixed with the Kentucky fiber, which is of a lead color, and spun and put together, and the jute is stained the color of the hemp, in order to pass it off for American goods.

Mr. PAYNE. How much duty should there have to be on the imitation goods you speak of?

Mr. COMBS. In the first place, I suppose that there should be a duty of an amount equal to the amount placed on the raw material.

Mr. PAYNE. How much would that be?

Mr. COMBS. Under my recommendation, about a cent and a quarter per pound, because there is little waste in sisal, and that is the main thing; and it is the cheapest cordage, probably, made, as far as my information goes. I do not pretend to be an expert, but the cost of manufacturing sisal into binding twine (it being simply a single twist) is very cheap, and very little in addition to that would have to be added in order to cover the difference between that and the cost of manufacture.

Mr. PAYNE. The duty was taken off largely at the instance of the farmer, was it not?

Mr. COMBS. I do not know, although if that is so I don't know how real that wish was on the part of the farmers. I have been informed that a great deal of the newspaper clamor that purported to come from the farmer came from other sources with regard to this.

Mr. STEELE. Would not \$30 be a prohibitive duty?

Mr. COMBS. No; not at all. The reason I fix \$30 is that while the act in force from 1883 to 1890 would be all right to protect us and keep us along where we are (and, in fact, the product went up before the McKinley bill to 11,000 tons, and was increasing), still I say \$30 a ton because this is really an item which if properly fostered can be made a source of immense resource to the American farmer. All the textiles I believe we need can be raised.

Mr. PAYNE. How much hemp was produced in 1890?

Mr. COMBS. In 1889, I think it was, 11,000 tons were produced—previous to the McKinley bill.

Mr. PAYNE. And prior to that there had been a still larger production?

Mr. COMBS. Yes; as far back as 1858 75,000 tons of hemp were produced in Kentucky and Missouri.

Mr. PAYNE. When did the importation of jute begin to affect this industry?

Mr. COMBS. That was at a time when I was not actively in the business, and, besides, we farmers do not keep up very well, and you had better get that information from some of these manufacturers.

Mr. PAYNE. Did the production of hemp increase or decrease after the enactment of the tariff of 1890?

Mr. COMBS. It decreased immediately.

Mr. PAYNE. And has been decreasing ever since?

Mr. COMBS. Yes.

Mr. EVANS. What was the product last year?

Mr. COMBS. About 5,000 tons.

Mr. JOHNSON. What proportion of this 10,000 made in 1890 was made into binding twine?

Mr. COMBS. That is a matter that the manufacturers could answer better than I.

Mr. JOHNSON. There is an impression among those who use the binding twine that we have no home-grown fiber that is used or that can be commercially used to take the place of sisal and manila.

Mr. COMBS. In Illinois, and I think even in Nebraska, they are doing it now. In Illinois in 1889 and 1890 they were growing and rapidly increasing the production of hemp in a way that was entirely different from the old idea of what could be done. They sowed it in great fields broadcast, cut it with the binder machine adapted to the purpose, left it out on the ground in the sun and rain, and then ground it in a machine, crude in its form, but undoubtedly if it had continued to be made in that way they would have improved their facilities; and as it was, they produced a first-class rough, tangled fiber, first-class in strength, first-class as compared with jute, not equal to sisal or manila for binding twine, but a fiber that would make excellent binder twines, as I am informed. There is no kind of twine now made of hemp, or at least only in very limited quantities.

Mr. JOHNSON. If I remember correctly, before 1890 I used some of that binder twine, and I found it practically worthless. It is too soft. It snarls up in the needle.

Mr. COMBS. Probably it was a single twist.

Mr. JOHNSON. Yes; all the binder twine is single twist.

Mr. COMBS. We found that with hemp it made it more expensive on that account. We had to make it in three small threads and run it together in order to get a uniform cord that would be satisfactory—and that is entirely satisfactory. I used chain cordage at that time when I was interested in hemp. There was a binder-twine mill that was making a binder twine with a Kentucky hemp, a twine that was about one-fourth Kentucky hemp and about one-half jute and the rest paste, and tremendous quantities of that were sent out. I was afraid you had got hold of some of that.

Mr. JOHNSON. We supported putting sisal and manila on the free list on the theory that they were raw material and that they could not be produced in the United States.

Mr. COMBS. I am sure that that committee, from its character and from its political opinions and its ideas in regard to protection, would not have done it upon any other idea.

Mr. TAWNEY. The State of Minnesota is manufacturing binding twine, and has experimented with all of the fibers grown in this country and has not been able to find, as I understand it, one that has yet proven satisfactory.

Mr. COMBS. Of course it would not be as satisfactory. A thing that is not as cheap as something else is not as satisfactory.

Mr. TAWNEY. The material is not satisfactory, for the reason that it does not give as good twine. The twine was not satisfactory to the farmer.

Mr. COMBS. I think that while the objection can be justly urged, under existing circumstances, that the American farmer could depend

on American hemp for his binding twine, I think it can be demonstrated that with proper protection hemp can be grown and twine manufactured in this country that is thoroughly satisfactory in every respect as to quantity and as to costs.

Mr. EVANS. How much more expensive is it for an acre of wheat than jute?

Mr. COMBS. I say that if sisal had a duty of \$25 a ton added to it, which we ask for, that that duty would only add  $1\frac{1}{4}$  cents to the cost of a ton, and whatever may be allowed the manufacturer, either with raw material or dutiable material, would only add  $1\frac{1}{4}$  cents to the duty which you give him to protect his manufactured interest, and that that would only amount to  $2\frac{1}{4}$  cents an acre of the grain, bound.

Mr. EVANS. A very infinitesimal amount.

Mr. COMBS. In other words, there is no objection, positively, that can be urged against this protective tariff that can not be urged with equal justice against any protective line. I don't stand before you to pretend that if you put a duty on this raw material the consumer can buy the product as cheap as without it, but I say that I take it for granted that other interests are going to be treated alike; that our hemp interest and all other interests are going to be treated on one protective basis, and if I pay a little more for my binding twine, as I cheerfully do, I will get more for my wool from this same process of protection. But I am not in the attitude, nor do I think the farmer is in the attitude, of expecting to buy what he uses through free trade, and then get benefits of protection on what he sells. I think that we, and I am free to say I think that these manufacturers in the East, also, should stand upon the broad basis of a fair protection for everybody instead of simply a fair protection for what they sell and free trade for what they buy.

Mr. EVANS. You said that a law ought to be passed to prevent fraudulent imitations of hemp textiles. I would like you to explain that.

Mr. COMBS. I mean to say that we could stand a lower protective duty upon jute if it were forced to stand upon its own merits in the market than we can if it is allowed to come in from India and then misrepresent itself and injure the character of our product—being sold for American goods when it is not, being of vastly inferior quality and strength.

Mr. EVANS. What is done, if anything, to make it appear to be domestic?

Mr. COMBS. It is dyed.

Mr. EVANS. It was about 1878 they commenced to use binder twine?

Mr. COMBS. I don't remember exactly. They first used wire. It was about that time.

Mr. EVANS. It was in 1883 that the revision of the tariff placed  $2\frac{1}{2}$  cents a pound on binding twine to protect it.

Mr. COMBS. Yes.

Mr. EVANS. Did not the price of binding twine within the next five years drop to half what it was under the impetus given it by the establishment of about forty manufacturing establishments of binding twine?

Mr. COMBS. I have no doubt that is true, and that it could be ascertained, but I have not the figures to be able to state whether that was the fact or not.

Mr. PAYNE. If those manufacturers were established so rapidly, the foreign fibers went up in price, didn't they?

Mr. COMBS. They went up in price, some said, because there was this unusual demand for them, and others said it was on account of a pool being formed.

Mr. PAYNE. And the largest development of binding twine was when the manila and sisal and jute were bringing high prices?

Mr. JOHNSON. In 1884 I paid 24 cents for my binding twine and last year it cost me 6 cents.

Mr. COMBS. What did you pay for it in 1889?

Mr. JOHNSON. About 10 cents.

Mr. COMBS. There, you see, is a loss of half under the same duty for the raw material.

Mr. JOHNSON. After the establishment of these American factories.

Mr. COMBS. I would like Mr. Van Horn, of Missouri, who is very familiar with this subject, to state the fact he has shown to me—that the growth of hemp would be immediately resorted to with great pleasure on the part of Missouri farmers, if they were only given adequate protection on the raw material.

**STATEMENT OF HON. R. T. VAN HORN, A REPRESENTATIVE FROM  
THE STATE OF MISSOURI.**

SATURDAY, *January 2, 1897.*

Mr. VAN HORN said: Mr. Chairman and gentlemen of the committee; there is no doubt at all that this last statement of Mr. Combs is true. The part of Missouri from which I hail, some fifteen or twenty counties in that section, is probably the best hemp-producing region in the United States, and produced the most hemp up to 1864 or 1865. If there was a duty on hemp now it would justify our entering upon that industry again. It would become, as it was for many years, the leading agricultural industry of the State of Missouri, perhaps, next to corn.

Mr. COBB. That is true.

Mr. VAN HORN. That is the finest hemp country in America—that part of Missouri immediately surrounding the district I represent and including it.

If you will permit me to say, I think our doctrine of protection is becoming one-sided—that it means the protection of the manufacturer and not the producer of raw material. I will give you a little incident that happened in my own experience here. I think it was in the Fortieth or Forty-first Congress. One of the best personal and social friends I had in the House of Representatives at that time was from your State, Mr. Chairman. I believe he is now your chief justice. What we called the Schenck tariff bill was before the House, and we wanted \$40, I think it was, on hemp. I was watching the progress of the bill through the House. A little while before we reached the hemp schedule I went to my friend from Maine and asked him if he could not cooperate with me in this respect. He looked at me in his quaint way and said, "You want me to come back to Congress, don't you?" I said that I most certainly did; that I could not do without him. He said, "My people build ships. They want oakum; they want cordage; they want sails, all at the lowest figures they can get them. I am sorry I can not help you." I excused him. Things went along until the lumber schedule came up, and then he came around to me and said he was very sorry he could not help me on hemp, but "Now we have come to the lumber schedule," and he thought I would help him. I put the same question to him that he had put to me, and he said, of course, he wanted me to come back to Congress, but that he could not vote for

hemp. I said to him, "I live in a prairie. We have no timber; we make fences of pine lumber."

From that time I have had the conviction, which has been verified by legislation, that our protection means too much the protection of the manufactured product and not of the raw material that enters into it. The hemp industry in my State, which was the largest industry in it, has been totally destroyed by this policy. If you will do what our friend from Kentucky asks, I have not the slightest doubt that within a few years we will be able to concentrate sufficient labor and industry and enterprise of the people of Missouri on that product so that it will become the second leading agricultural interest of the State, while now it is absolutely destroyed.

I have nothing in detail to enter into, am not master of the question sufficiently to do so, but I can subscribe to everything my friend from Kentucky has said upon the subject, and I really believe that by the restoration of the hemp duty Missouri would be benefited even more than Kentucky.

Mr. COMBS. I would like to present to the committee resolutions embracing the action of 24 colored churches in my State, showing how the colored laborers of Kentucky stand upon this question. Many of these people can not read or write. They have inferior advantages for reaching legislation, but so much were they interested in this question that while this thing was only considered for a few days, on the Sunday before I came here 24 churches, by resolutions, requested that this duty should be provided for.

The only respect in which I differ from my friend here is, I do not think manufacturing interests have ever been too much fostered in this country by protection. I do not think they have been too much protected by tariff legislation. But I do think that some interests have had insufficient protection.

Mr. VAN HORN. You misapprehend me. I do not believe manufacturing interests have been too much protected; but I wanted to be understood as saying that where one interest gives way it is the producing interest.

#### STATEMENT SUBMITTED BY PRODUCERS, DEALERS, AND MANUFACTURERS OF AMERICAN HEMP.

##### COMMITTEE ON WAYS AND MEANS:

The undersigned have been selected as a committee to represent the producers, dealers, and manufacturers of American hemp, and respectfully recommend that you fix in the schedule of flax, hemp, jute, and other vegetable fibers the following tariff rate, to wit:

Russian and Italian hemp,  $1\frac{1}{2}$  cents per pound; hemp hackled, known as line hemp,  $2\frac{1}{2}$  cents per pound; upon tow of either Russian or Italian hemp, three-fourths cent per pound; sisal, manila, and jute, each  $1\frac{1}{4}$  cents per pound; and upon all other vegetable fibers not specified elsewhere in this bill  $1\frac{1}{4}$  cents per pound, except jute butts and rejections, which are used in the manufacture of paper and cotton bagging and on which we do not ask that a duty be placed.

The duties herein recommended are not excessive. Indeed, when it is considered that all fibers of importation are produced in the countries of the cheapest labor of the world, they may be considered most moderate, and only covering to a partial extent the difference in the labor cost of these fibers with such fibers as can be raised in this country.

From the time the first tariff bill was considered, in 1789, until the present day the production of vegetable fibers in this country has never been fostered by an adequate protective duty. This country, with an allowance for the difference in labor cost, can produce every pound of jute which we would consume, of a quality in many instances superior to the India product. (See *American Jute Culture in the United States*, by Charles Richards Dodge, special agent, Government print, 1896.)

With even such inadequate protection as was afforded by the act of 1883, the production of hemp had increased from about 5,000 tons per annum to about 11,000 in 1889.

The experience of the past warrants the assertion that hemp will grow to advantage from the good soil in all the Middle States and Middle West, and under proper encouragement immense quantities of this fiber, sufficient to answer all requirements of this country, may be grown. And the processes of production will be so simplified and improved by machinery that ultimately the cost will be reduced to the consumer to a lower level than now exists. In the year 1859 the three States of Kentucky, Missouri, and Illinois produced over 70,000 tons of hemp. During the year 1896 there were imported 917,656 bales of jute, manila, and sisal, which at an average of 400 pounds to the bale would equal 183,531 tons, and the importations of Russian and Italian hemsps and tows and similar fibers would bring the amount up to about 200,000 tons.

From the facts stated, we think there can be no doubt that this country is capable of producing hemp in an amount equal to the importation of the fibers just mentioned; and while it is neither claimed nor expected that such an enormous expansion will occur, still, if the duties levied on foreign fibers will equalize conditions, a home-grown product will largely supplant the foreign article, give employment to many thousands of our people, and millions of dollars that now go abroad would remain at home, to the great advantage of this country. The chief opposition to the duties we propose comes from the manufacturers of foreign fibers whose attitude is that of importers, and, as is usual with that class, are for free trade in what they buy, though demanding a protective tariff on what they produce. Such a position is not only glaringly inconsistent, but is shortsighted policy on their part, as protection on such a foundation can not endure.

We respectfully call your attention to the fact that the duties recommended from an *ad valorem* standpoint are less than those requested by almost any industry which has appeared before your committee; to the fact that all agricultural products to which our climate and soil are adapted should be raised exclusively in this country.

That while the apparent effect of this schedule might be to add  $1\frac{1}{2}$  cents per pound to the cost of binder twine, this would only amount to  $2\frac{1}{4}$  cents per acre of grain bound, and that the production of the material for these twines by American farmers would more than offset this slight increase of cost.

The rate requested is the minimum that will secure the desired results, and the power of substitution is so great that to put any one of these fibers on a lower rate will destroy in a great measure the efficacy of the whole bill. No objection can be made to this schedule that can not be urged against any protective tariff.

We wish to call your attention also to the fact that few schedules will better serve the needs of the country, inasmuch as this schedule will, upon the basis of the importation of foreign fibers during 1896, as

shown above, add to the income of the Government about \$5,000,000, and at the same time develop a great industry in this country, give diversity to our agricultural products, and render us independent of importation for a standard article of consumption. It is short-sighted policy to shape legislation with reference merely to the present.

Sisal and manila and foreign fibers generally have been abnormally low for a period of three years. Prior to July 1, 1893, manila for ten years had not touched a point below 6 cents, nor sisal below  $4\frac{1}{2}$  cents (except once for a short time), while the present price for manila is  $4\frac{1}{4}$  cents, and sisal  $3\frac{7}{16}$  cents. There can be no question that these extremely low prices have been caused by an extraordinary combination of circumstances, which are well understood, but which the limits of this paper will not permit us to present for your consideration. In due time the pendulum will swing the other way, and with the restoration of normal and higher prices American hemp may exert a restraining influence on fiber cost.

The Republican party pledged itself in the St. Louis platform to ample protection to the three great agricultural products, wool, hemp, and sugar, and we submit our requests with full confidence that justice will be done this interest.

The capabilities of American flax have not been noticed, but are worthy of consideration.

Your attention is also respectfully called to appended memorials.

LESLIE COMBS.  
R. W. McRERY.  
R. C. MORGAN.

*To the United States Congress:*

(Through the Ways and Means Committee of the House.)

We, the undersigned citizens of Lafayette and Saline counties, Missouri, living near Waverly, in accordance to previous invitations given by said committee, beg leave to make the following suggestions concerning the growth and culture of hemp:

As we understand, American hemp has been supplanted in our market by a foreign importation of jute, sisal, manila, and various seaweed in the manufactured and crude state. These foreign products, as we are informed, are produced by the cheapest labor of oriental countries, and are imported into our country to such an extent and in such vast amounts, and can be sold at such low prices, as to make the growth and culture of American hemp in competition with said foreign products impossible, and hence the abandonment of hemp raising in this country.

Both this soil and climate are eminently adapted to the production of hemp, and the largest prosperity ever enjoyed by agriculture in ten of the best counties of this State was when hemp was the chief agricultural product. Now, as we understand most of the national revenue has to be raised by impost duty, we therefore respectfully submit that a duty on the above-imported articles, for the purpose both of revenue and protection, will subserve the best interest of agriculture both in this and other sections of the country.

We, Republicans, Democrats, and Populists, irrespective of party affiliations, submit the foregoing to the end that our lands may be more remunerative and thousands of idle laborers employed.

M. C. SHEWALTER and 66 others.

LINCOLN, NEBR., *January 8, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

The undersigned, citizens of the State of Nebraska, feeling a deep interest in the cause of the producers of this State, and believing that the tariff schedules now under consideration by your committee are a matter of the greatest importance to this section of the country, do most respectfully ask that an adequate duty for the protection of the farmers of this country be imposed upon all foreign fibers, including jute, sisal, manila, Russian and Italian hemp and tows, and flax and flax tows that come into direct competition with the American product. They also ask for a tariff on hay, wheat, barley, oats, and all cereals and seeds produced in the United States that shall secure the home market to American agriculturists for their staple productions.

The competition of the foreign producers of these raw materials and grains and feed

under the present tariff schedule has greatly injured the agricultural interests of the West, not so much by the lowering of the price as in forestalling the market and rendering a very large amount of our products unsalable on account of the large amount of the foreign product that is imported and that can be sold especially on the Atlantic seaboard through cheap labor and low rates of ocean transportation, and thus crowding out American producers from their own legitimate market.

W. H. H. DUNN and 109 others.

**STATEMENT SUBMITTED BY MR. FRANK L. BABBOTT, OF THE  
CHELSEA JUTE MILLS, OF NEW YORK, N. Y.**

NEW YORK, *January 7, 1897.*

**COMMITTEE ON WAYS AND MEANS:**

Before referring to the jute industry we wish to reply briefly to the appeal made before your committee on January 2 for a duty on fibers competing in any way with Kentucky hemp. We hesitate to make any opposition to the growers of this fiber, but we feel that the duties which they ask on other fibers now free would not materially help them. The volume of sisal, manila, jute, and jute butts is so great that we believe it would be unjust to place a duty upon them to protect a crop that is itself so very small. The importation of these fibers for the year 1896, as reported by W. S. Daland, was 1,229,000 bales, averaging  $362\frac{1}{2}$  pounds per bale, or 192,277 tons, on which a duty of \$15 per ton would be \$2,884,155. The crop of Kentucky hemp for the last season was stated to your committee to have been only 5,000 tons, worth \$475,000, and has some years of recent date been as small as 3,500 tons. The annual crop of Kentucky hemp in the fifties, according to statement made before the McKinley committee in 1890, was as large as 83,000 tons, and, as stated at that time, went down to 2,500 tons in 1869, a period when the jute industry was little known in the United States and before manila and sisal had been made into binding twine, which is practically the only way in which these two fibers last mentioned could compete with Kentucky hemp to any great extent. That is to say, this industry of hemp growing and manufacturing had almost temporarily passed out of existence in this country before it had entered into competition with manila, sisal, or jute. We do not here refer to the competition of Kentucky hemp with jute butts as that is a branch of the industry with which we are not familiar and very different from the manufacture of jute fiber both in its processes and products.

The average price of a fair quality of jute for the past two years has been a little less than 2.6 cents per pound, f. o. b., New York, of which there is a very small percentage of waste in course of manufacture. The price of sisal for shipment January 1, 1897, was  $3\frac{3}{8}$  cents per pound and has been as low as  $2\frac{5}{8}$  cents, f. o. b., New York. Of this product there is practically little or no waste in process of manufacture. The average price of Kentucky hemp for the last four years has been \$112 per ton, f. o. b., New York, but sometimes it has fallen below \$100 per ton. The last quotation made to us this month by Colonel Morgan, of Kentucky, was \$95 per ton, f. o. b., New York. Add to this a loss of waste in manufacture of 20 per cent and the net cost of the fiber is 5.3 cents per pound. So you will see that Kentucky hemp is so much more costly in New York that it can not be practically used in products where it competes on even terms with either sisal or jute. The great use of sisal is for rope and binding twine.

The principal jute products manufactured in America are yarns and woven goods, with which Kentucky hemp does not compete, a good jute yarn selling as low as the net price of raw Kentucky hemp. Jute does

compete somewhat with Kentucky hemp in the manufacture of wrapping and sale twines, but this is really a very small and insignificant part of the jute industry. We are, therefore, at a loss to see how a duty of 20 per cent, or \$15 per ton, upon jute or sisal would in any way be of a benefit to the grower of Kentucky hemp. We admit that jute is sometimes with Kentucky hemp in the manufacture of twines, but only to a very slight extent, and mixed even by mills in Kentucky when it is to their interest to do so.

We do not know of a pound of jute binding twine having been made in five years in this country. We ourselves were at one time large manufacturers of it, but have been unable to make a pound of it in six years at a cost that would enable us to compete with the market price of sisal binding twine. The competition that has of late years been most detrimental to Kentucky hemp, as well as jute, has come mostly from sisal, which, on account of its low cost and cheapness of manufacture, has practically driven binding twine made from jute or Kentucky hemp out of the market, the price of sisal binding twine for several years having been below the net price of raw Kentucky hemp. The cost of manufacturing a pound of binding twine from sisal is so much less than it is from either Kentucky hemp or jute that with the three raw fibers at the same price it would be impossible for jute and Kentucky hemp to compete with sisal in the binding-twine market. We do not see how it would be possible for any legislation to change the economic laws that brought about this result. It was stated before your committee on January 2 that the importations of jute in this country were 2,000,000 bales per annum. As a matter of fact the average importation of jute for four years, as reported by W. S. Daland, has been 129,986 bales of 400 pounds each. These figures do not include jute butts, which are the stubble of the jute plant and are not used for the same purposes as the upper part of the stalk or jute fiber. We would suggest for your consideration the following rates of duty on jute and jute products:

Raw jute, free.

Single yarns made of jute, not bleached, dyed, or stained, 30 per cent ad valorem.

Burlap, not exceeding 60 inches in width, made of jute single warp and single weft, uncolored or unbleached, in whole or in part,  $1\frac{3}{4}$  cents per pound.

Hemp and jute carpets and carpetings, 5 cents per square yard, valued at 15 cents per yard and under.

Bags for grain, undyed, uncolored, or unbleached, in whole or in part, 2 cents per pound.

All other manufactures of jute valued at 5 cents per pound or less, 2 cents per pound; valued above 5 cents per pound, 40 per cent ad valorem.

We wish to call your attention to the remarkable growth of the jute industry of Calcutta. It has increased about 130 per cent since 1890, when, according to the Blue Book of India, there were more than 50,000 people employed in it. It is now more than twice as large as that of Dundee. This change in the business has brought us much more directly in competition with cheap India labor than we were six years ago.

We wish, in making this report to you, to refute the statement so often made that no burlap is manufactured in this country, and to call your attention to the detailed report made by William Rutherford, esq., of Oakland, Cal., showing that there is sufficient machinery on the Pacific Coast alone, bought for making burlap, to produce annually

21,774,000 yards, and particularly to emphasize the fact that some of this machinery, bought just previous to the passage of the Wilson bill, is now lying in the original cases in which it was shipped to America, which have never been opened. We have machinery in our own works suitable for the manufacture of yarns, carpets, burlaps, etc., much of which we have been unable to operate since the passage of the Wilson bill.

CHELSEA JUTE MILLS,  
FRANK L. BABBOT, *Treasurer*.

#### JUTE AS A COMPETITOR OF AMERICAN FIBER.

FRANKFORT, KY., *January 11, 1897.*

##### WAYS AND MEANS COMMITTEE:

The letter of the Chelsea Jute Mills abounds in inaccuracies and inconsistencies. For instance, they say that manila and sisal do not compete with American hemp except on binder twine, which is not true. Very large quantities of two and three ply sisal twine are made for tying heavy packages and displace a corresponding amount of heavy hemp twine. Again, the trouble with jute binder twine has not been so much its inability to compete with sisal in price as that it has proven unsatisfactory. There is throughout the communication a studied effort to belittle the American hemp industry by speaking of it as the Kentucky hemp industry. Kentucky, it is true, has been more largely interested in the cultivation of hemp than any other State, but many other States can cultivate it successfully, and as a matter of fact the past year the largest hemp raiser in the United States was Dr. W. H. H. Dunn, of Lincoln, Nebr., who cultivated 1,000 acres of hemp, a crop six times as large as the largest grown by any one in Kentucky.

The question of adulteration by mixing jute with hemp is evaded by making a countercharge against Kentucky manufacturers. As far as we are concerned, we have never misrepresented the character of our goods. To manufacture oleomargarine may be all right, but to sell it as pure Alderney butter is to practice a deception and is reprehensible. If, as some contend, oleomargarine is more wholesome than butter, the deception does not otherwise injure the buyer, but in case of jute used as an adulterant, in addition to the deception an inferior article is palmed off upon the consumer, to his inconvenience and pecuniary loss. There is therefore force in our request that this fiber should be made dutiable, so that there will be less inducement to commit this fraud.

I beg leave to call attention in this connection to the fact that, owing to its weakness, it takes a twine about twice as heavy of jute to equal the strength of American hemp twine. Owing to the fact that this is not generally understood by the consumers, a lower-priced jute twine has driven out the hemp twine, because it is supposed to be too expensive, when in fact it is the more economical. As far as this class of goods is concerned, a very heavy duty, instead of being a burden upon the consumer, would actually drive him to use what it would be advantageous for him to use. Now, this to some extent is applicable also to sisal twines, as they have to be made much heavier to have the same tensile strength.

You will note that one ground of opposition on the part of Chelsea Jute Mills is that the duties asked for will not materially help us. It seems to me that the judgment and instincts of those in the business are more to be trusted on this question.

They very inconsistently oppose granting hemp protection, because

it is, as they say, a small and declining industry, but ask it on burlaps, which as an industry is merely a possibility. On these goods they ask a duty that is equivalent to over  $2\frac{1}{2}$  cents per pound. We are buyers of burlaps, and are willing to pay the enhanced price that this will cause, in order to give employment to more American laborers, provided that the principle is fairly and generally applied. If not, we think in justice to consumers these manufactures of jute should be put upon the free list.

As to binder twine, the argument is not as strong as stated, as hemp binder twine has a greater length to the pound than sisal by 20 to 25 per cent, and is much preferable, owing to its pliability and its insect-proof qualities. If such a duty as we ask for is imposed, it will, all things considered, bring the two much closer together than the figures would indicate, and would undoubtedly cause a large consumption of American hemp binder twine. On the remainder that would still be made from sisal and manila the enhanced cost would not be measured by the difference in price of sisal and American hemp, but by the duty, every dollar of which would go into the United States Treasury. So much for sisal and jute.

Now as to Russian and Italian hems and tows, no argument seems to have been offered from any quarter to show that they should remain on the free list. The amount of these hems and tows imported the year ending June 30, 1896, as shown by the Report of the Bureau of Statistics, was 8,550 tons, for which American hemp can be substituted without detriment to the consumer, as the preference is given now to these foreign hems on account of their brighter color, not on account of their greater cheapness. This is partly a matter of fancy and partly as a protection against the fraudulent substitution of jute.

R. W. McRERY.

### CALIFORNIA PRODUCES SUPERIOR HEMP.

#### COMMITTEE ON WAYS AND MEANS:

I am a producer of American soft-hemp fiber. This fiber is pronounced by expert importers and manufacturers of hemp products to be superior to the best grades of Italian, Russian, Hungarian, and other foreign soft hems now extensively imported into this country free of duty.

While I have fully demonstrated that we can produce in California in unlimited quantities a hemp superior in texture, softness, and strength to any foreign imported hems, we have also fully ascertained that we can not afford to continue its production with profit in competition with the cheap pauper labor of Italy and other foreign hemp-producing countries under the present existing tariff law. The climate of the interior valleys of California has been proved to be particularly adapted to the production of fine soft-hemp fiber, being almost identical with that of Italy, from which country the greater importations of fine hemp now come; and the rich alluvial bottom lands, very extensive in California, are especially adapted to the growing of fine hemp.

Hemp requires a great deal of labor, and although we employ machinery for cutting, retting, breaking, and baling, we necessarily have to employ a great many men to handle the crop, at an average cost of \$1.75 per day each (including board), whereas the foreign farm laborer is paid scarcely 25 cents per day.

With the tariff existing prior to the reduction of 1894 the American

hemp grower could scarcely then produce hemp with any profit by reason of foreign competition, but with the tariff all taken off of foreign importations the industry has been almost paralyzed in this country.

In the report of 1896 of the Hon. Charles Richard Dodge, special agent of the Department of Agriculture for the investigation of hemp and jute fibers in the United States, he states that the production of hemp in the United States has decreased from 75,000 tons per annum formerly produced to scarcely 5,000 in all the United States in 1895.

A good quality of hemp fiber can be successfully produced on the alluvial bottom soils in all the central, southern, and western parts of the United States. With machinery recently invented and perfected for seeding, cutting, retting, breaking, scutching, softening, and baling hemp, and with a fair duty imposed upon foreign importations, I am fully convinced that the production of American hemp will be entirely restored within three years to 75,000 tons or more per annum, and that within five years the production will have so increased that there will be no necessity of importing any soft hems into this country.

I therefore trust you will fully consider this matter, and beg to submit the following recommendations for your consideration:

Section 266 of the present law reads:

Hemp, hackled, known as dressed line, one cent per pound.

This section should read:

Hemp, hackled, known as dressed line, two and one-half cents per pound; hemp, straight, undressed, one and one-half cents per pound; tow of hemp, one and one-fourth cents per pound.

Referring to the free list, paragraph 497, under "Grasses and fibers," the present law reads:

Istle, or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, flax straw, flax not hackled, tow of flax or hemp, hemp not hackled, hemp, flax, jute, and tow wastes, and all other textile grasses or fibrous vegetable substances, unmanufactured or undressed, not specially provided for in this act.

The new law should omit the words "or hemp, hemp not hackled, hemp," and the new section would then stand as follows:

Istle, or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, flax straw, flax not hackled, tow of flax, flax, jute, and tow wastes, and all other textile grasses or fibrous vegetable substances, unmanufactured or undressed, not specially provided for in this act.

JNO. E. KIRK.

P. S.—In this statement I have not covered the question of jute or flax, as I am informed that these fibers are fully represented by other statements to you.

### TOW.

(Free list, paragraph 497.)

### STATEMENT SUBMITTED BY MR. R. CRUZEN, OF PAXTON, ILL., MANUFACTURER OF TOW.

PAXTON, ILL., *January 8, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

A few years ago, when we had some duty on foreign fibers, the American hemp industry was getting a start in our State—perhaps not less than 4,000 or 5,000 acres was grown here, and within 25 miles of this place, on a paying basis—but since everything comes in free in that line, we have reduced our acreage to 400 or 500 acres, and unless we get

some protection it looks as though we would be compelled to stop our tow mills and crib corn in them. It seems to me if we had a duty of 2½ cents per pound that it would add an industry in the West which would be of great importance to us.

The growing and putting the hemp into tow requires much labor, and our people would feel the loss of my mill very seriously if it should stop, the work in connection with same being all winter labor. Of course this is but a speck, but if encouraged would certainly grow to quite an industry. I trust you will give the matter due consideration, and if you find it will not do the general public an injustice to give us some protection, the hemp raisers will certainly feel very grateful if you should give us about 2½ cents per pound and think it good Republican doctrine.

R. CRUZEN.

### TARIFF OF \$4 TO \$6 RECOMMENDED.

WINONA, MINN., *January 7, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

Upholstery tow is a coarse tow which is used in making upholstering for furniture, and has been largely used throughout the United States. We understand that in former years there was a tariff of about \$6 put on this tow. It is made in three grades, and is called coarse, medium, and fine. Several years ago there was a large amount manufactured in Ohio, Indiana, and other States, but since the land has become too valuable in that part of the country to raise flax. They now raise it largely in the West, in southern Minnesota, northern Iowa, and southern Dakota. Northern Minnesota and North Dakota are growing more than they formerly did.

With the changing of the crops of flax from the Middle States to the Western we were induced to manufacture a machine to break flax straw into upholstering tow, but about that time the tariff was entirely taken off from all grades of tow and the price dropped accordingly, until, with the labor of manufacturing and freight rates, there was nothing left for the man who did the business.

It would seem to us that if there could be a tariff of about from \$4 to \$6 put on this kind of tow, it would be of much value to the farmers in this vicinity. We understand that tow has been shipped in large quantities from Canada to the Eastern and Middle States in competition with our Western tow.

We will say that the flax straw is not used for any other purpose, and that with a tariff it could be worked up into upholstering tow at a fair profit and give the farmers from \$1.50 to \$2.50 per ton for the flax straw.

We trust that with this information you will be able to arrange for a proper tariff on upholstering tow.

WINONA MANUFACTURING COMPANY.

### TARIFF OF \$3 ENOUGH.

WINONA, MINN., *January 11, 1897.*

DEAR SIR: As I am engaged in the manufacture of upholstering tow, and we have to compete with Canadian tow, which is now on the free list, I write you to see what you can do for us "tow fellows." There was at one time a \$6 duty per ton, but \$3 will do just as well.

J. C. WEBSTER.

**ONE HUNDRED THOUSAND DOLLARS BURNED IN MINNESOTA.**

MINNEAPOLIS, MINN., *January 8, 1897.*

**COMMITTEE ON WAYS AND MEANS:**

We take the liberty of addressing a few lines to you regarding the flax industry in the West and the condition of it. We are manufacturers of upholstering tow, used in the cities of the East largely. Our freights to Eastern cities are high, the distance being long, and we have had to compete more or less with Canadian tow. They being nearer the markets than we, were able to cut into prices in such a way that it has driven us out of certain markets. While our new machinery is perhaps superior to any they have, still their labor gives them an advantage over us. There is an immense field for the business in Minnesota, Iowa, North and South Dakota. Our capacity is a production of some 4,000 tons, but we have had to close one mill and cut the others down to about 800 tons. We did pay the farmers as high as \$3.50 per ton for the straw, but what little we have recently purchased has been at \$2. We believe with a proper tariff the business could again be brought back, and trust your body will see fit to do what is possible toward adjusting a tariff. The farmers of this State should get at least \$100,000 out of the straw they now burn for want of a market.

C. E. & GEO. N. LYMAN, Jr.

**CANADIAN COMPETITION.**

DODGE CENTER, MINN., *January 5, 1897.*

**COMMITTEE ON WAYS AND MEANS:**

I am in receipt of a communication from Messrs. Kumpf Bros., of South Dakota, who are large manufacturers of upholstering tow at Madison, S. Dak., and Romana, Iowa. They name twenty-eight different flax mills in Ontario, Canada, which are competitors for the United States markets. There are a great number of mills in Canada which compete with us for this trade, and as they have a decided advantage of us in the way of freight rates to our best markets, namely, Boston, New York, Philadelphia, Buffalo, N. Y., Detroit, and Grand Rapids, Mich., and common points, we are of the opinion that there should be a tariff placed on upholsterers' tow of at least \$10 per ton.

There is a grade of tow known as paper stock that is shipped into the United States and used for upholstering purposes which should pay the same tariff rate when so used.

The tow from Canada is not superior to the tow made in Minnesota, and if there was a tariff that would protect us we would manufacture ten times as much tow as we now do. There are hundreds of thousands of tons of flax straw wasted in Minnesota each year which would be used if we could be placed on an equality with the Canada manufacture of same.

There will not be over 300 cars of tow made west of the Mississippi River this year on account of low price, and there will be very little profit, if any, on what is made. Nearly all the mills are now idle, and have been since they manufactured the crop grown in 1895. I have only bought about 500 tons of flax straw grown in 1896, and I should have bought 4,000 tons in order to make a reasonable output at my three mills. I do not know of any of the other mills in southern Minnesota which have bought a single ton of this year's (1896) crop.

We have also experimented with hemp the last three years, and have found that we can raise it here for fiber to a decided advantage, and if there was a tariff on that product which would enable it to be grown in Kentucky and Missouri, we would be enabled to compete with them, as our farmers say they have time in the winter to handle hemp to advantage.

Hemp twine is not consumed by the farmers or those dependent on them in the great grain fields of the Northwest, and I believe it was a mistake in the McKinley bill to remove the tariff, hoping to benefit the above class of people.

With a reasonable protection on flax tow of all kinds, on flax for spinning purposes, and hemp fibers and goods manufactured from same, there will be a wonderful increase in utilizing the same.

J. K. BRADY.

### TOW SHOULD REMAIN FREE.

EAU CLAIRE, WIS., *December 21, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

Concerning the revision of duties on flax, tow, and yarn, we have to say:

(1) There is no tow manufactured in the Northwest, nor in any part of the United States, so far as we know, that is suitable for spinning into yarns to be made into crash toweling. In Minnesota and Dakota flax is grown for the seed, and the only tow made is a coarse, uncleaned article suitable only for upholstering and like purposes. We could not use it in our business if it was furnished free of cost. In Michigan, near the Canada line, a better article is prepared, but we have been unable to use any of the samples sent, for the reason that it is not clean enough. We are therefore obliged to use a Russian tow on which at present no duty is imposed. The removal of tow from the free list would work serious hardship to manufacturers of crash, and if a high duty was imposed, we can not see how we could continue its manufacture.

(2) We use foreign warps in making crash, and a reduction of the present duty on tow yarns would greatly help us in meeting foreign competition on the manufactured goods.

(3) We favor specific instead of ad valorem duties. We are unable to understand how foreign crashes can be sold so cheaply in our markets under the present tariff, except on the grounds of undervaluation. In regard to an increase of the duty on manufactures of tow, we do not feel like asking too much. If we can have free raw material and specific duties on imported goods, we will be satisfied with a moderate increase of the present schedules.

EAU CLAIRE LINEN COMPANY,  
S. S. KEPLER, *Secretary.*

### PINE TREE AND FLAX STRAW FIBERS.

#### TWO NEW PRODUCTS WHICH ARE IN NEED OF PROTECTION.

PHILADELPHIA, *December 29, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

Assuming that in framing the new tariff law under consideration of your committee it is the desire of the committee to do all in its power to bring about prosperity all over the country and not merely to Eastern

manufacturers, I wish to call your attention to two products, the reasonable consideration of which in the new tariff would create new industries of great value to those classes of producers who seem to be most difficult to reach directly through tariff legislation, viz, the Southern and Northwestern farmers. One of these is the product of the Southern pine tree, a cotton bagging which can be made from pine needles. The supply is unlimited and the demand for bagging you can measure by the cotton crop. The value you can estimate by the amount of money sent out of the country every year for jute bagging. This pine-fiber bagging can be made to compete favorably with jute when jute is not the beneficiary of 100 per cent bounty, as is now the case, and in fact could almost compete with it under existing adverse exchange conditions, but money to start new industrial enterprises can not be had so long as these industries are being driven out of existence by adverse legislation.

The second product to which I refer is made from a waste material in the Northwest, viz, flax straw, and my remarks above anent pure fiber apply with equal or even greater force to this material. Reference to the statistics of the Agricultural Department will show the enormous quantities of this fiber which are allowed to go to waste every year. Each ton of flax straw represents about 300 pounds of fiber.

Your interest in these suggestions will depend entirely upon whether the new law is to be a revenue or a truly protective measure.

After thirty years' experience in the dyestuff business, I can say that ad valorem duties on aniline or coal-tar dyes put a premium on rascality.

JOHN H. LORIMER.

## HACKLED FLAX OR DRESSED LINE.

(Paragraph 265.)

### STATEMENT SUBMITTED BY J. R. LEESON & CO., SELLING AGENTS FOR THE NORTH GRAFTON, MASS., FLAX MILLS.

BOSTON, MASS., *January 8, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

As the selling agents of the product of the Grafton Flax Mills at North Grafton, Mass., we beg to address your honorable committee on the subject of the raw material which is used at those mills—hackled flax or dressed line. Since the establishment of the Grafton mills, nearly two decades since, we have not been able to find any flax in this country adapted for the use of those mills in spinning yarns which are used in the manufacture of threads for sewing boots, shoes, harness, and other heavy materials, no such flax being grown on this continent, so far as we have been able to discover. We are therefore of necessity obliged to import the flax necessary for the use of those mills. It happens to be convenient for us to import this flax divested of the straw and tow. Other spinners find it to their advantage to import scutched flax, they having uses for the tow which results from the process of hackling.

As you are doubtless aware, after the flax plant is pulled from the field it goes through a process of moistening, technically called retting, for the purpose of loosening the straw and woody portion of the stalk from the fiber. It is then taken to the scutching mill, where it goes

through the first process of cleansing of such extraneous substances from the fiber. The next process of disintegration and straightening of the fiber is called hackling, and it is after the flax has undergone this last operation that it is known as dressed line or hackled flax, in which condition it is when imported by us. You will observe that the material at this stage is still a fiber and is in no sense a manufactured product, not being in a condition for use in any of the economic arts. The first process of manufacture follows that of hackling, which this material undergoes when received at the mills at North Grafton.

From the enactment of the first tariff act in 1789 until the act of 1870, with the exception of two years—1828–1830—the legislation of Congress upon this substance was based upon the plain, obvious facts relating to the matter here indicated, namely, that flax, whether taken after the process of retting or after the process of hackling, is raw flax. Acting upon this view, therefore, the same rate of duty was imposed upon the material during all the period named, with the exception of the brief interval indicated.

From 1870 to 1894 a slight difference was made in the rate applicable to scutched flax and hackled flax, and the law of 1894 still retained a duty on hackled flax, but placed scutched flax on the free list. Presumably the object of making this discrimination was for the purpose of protecting an exceedingly small number of men engaged in this limited field of industry. We have made diligent investigation in regard to the effect upon the wages of the few hundred persons thus employed during the period when the duty on hackled and scutched flax was different and when it was the same, and we must frankly state to your honorable committee that we have been unable to find any evidence that it made the slightest difference in the rate of wages paid to the number so employed, or that such discrimination has in any degree affected their condition. The linen industry is a comparatively limited business at the best, and there can be no doubt that the most effectual way of encouraging that industry in this country is to enable the spinner to buy his raw material where and in such form as will best suit his requirements, at the lowest cost compared with the cost of the same material to the foreign spinner. In order to diversify the linen manufacture here it is essential that the manufacturer shall have open to him the flax markets of the world, so that he may be enabled to select just the kind of flax which is adapted to the particular product he would manufacture. No country produces flax which is equally adapted to all the various purposes of the flax spinner. The flax product of each country has its special qualities and peculiarities, and it is necessary that the spinner of fine flax yarns shall be enabled to select his raw material in the world's markets, and that he should not be hampered by the addition of the extra item of cost of this material in order that he may successfully compete with spinners in other countries.

It is not at all likely that flax fiber will be produced in merchantable quantity and quality in this country, for many technical reasons which it is not necessary that we burden your committee with at this time. Suffice it to say that the product of the American flax grower is flaxseed and its products. Owing to the dry climate and warm temperature, flaxseed ripens in this country more fully than in European lands. The value of the flaxseed and its products at present grown in the United States is estimated at something like \$15,000,000 per annum, and it is an established fact that the value of these flaxseed products grown in this country is six or seven times greater than the value of all the flax

fiber at present imported into the United States. Our extended experience in linen-thread manufacture in this country has conclusively proved to us that the wise policy for Congress to adopt in relation to the product of the flax plant, with the view on the one hand of protecting the flax grower in the United States and at the same time encouraging the development of linen manufacture, is to put an adequate rate of duty on the product of flaxseed, and following the precedent of Congress from 1789 to 1870, admit flax fiber, or raw flax in all its forms, upon the same basis; moreover, that the policy adopted from 1832 to 1842, admitting such materials free of duty, will more effectually than any other method which can be devised help the farmer who raises the flax and the flax spinner who would manufacture it.

J. R. LEESON & Co.

## FLAX DRESSERS.

(Paragraph 265.)

### STATEMENT OF MR. JOHN WILSON, OF NEWARK, N. J., FLAX DRESSER IN BEHALF OF LABOR.

SATURDAY, *January 2, 1897.*

Mr. Wilson read the following paper:

MR. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: I beg to say I am here on behalf of the flax dressers, to ask your committee to restore the duty of 3 cents per pound on hackled flax, known as dressed line, with raw on the free list; but if a duty of 1 cent a pound be put upon the raw, then we ask you to advance the duty on dressed to  $4\frac{1}{2}$  cents a pound, as it would take  $1\frac{1}{2}$  pounds of raw flax to make 1 pound dressed. We are not asking a prohibitory tariff, but one that will even the conditions existing between labor abroad and in this country.

There are two classes of flax-spinning factories in this country—one imports all or nearly all of its flax in a dressed state, merely spinning and finishing it into yarns and threads here. One of these firms, doing business in Grafton, Mass., and Johnstone, Scotland, employ about 700 hands in their flax-dressing department at the latter place, but none in their factory here; and taking into account the rate of wages in the United States and Great Britain is as follows: Sixty-five pounds of dressed flax being the average product of 112 pounds of raw, which constitutes a day's work in both places, we get the following: \$6.40 for dressing 1 pound of flax in America, \$3.95 cost of dressing 1 pound of flax in Great Britain, with duty added leaves a balance of \$2.45 in favor of the importer. Those figures, gentlemen, represent the highest wages paid abroad in our trade. We do not ask a protection to enable us to compete with the lowest rate of wages, which is Russian, and costs but one-half cent to dress a pound, nor is the rate we ask one that will prohibit importations and so yield no revenue, for it still leaves a margin for the importer who has his flax-dressing plant abroad. Here are the Treasury figures for duties collected on flax and tow, at 3 cents a pound:

Dressed flax, \$77,826.45; at 1 cent a pound, raw flax, \$96,041.88; at one-half cent, tow, \$25,726.55; total duties, \$199,594.88, for 1892. Duties collected for year ending June 30, 1896, on dressed flax only, \$44,446.07; excess of revenue from flax in 1892 over 1896, \$155,148.81. These figures which we quote are Treasury reports. We believe (but in our position we can not prove) that much dressed flax, notably from

Russia (labor being 600 per cent below here), comes in without paying duty, as it is so coarse that only an expert could detect any difference between it and the raw material, thereby defrauding the Government of much revenue. As to the flax-growing industry, some of us believe that it has been wiped out by the importers of dressed flax, as they, having no dressing plant in their firms here, offer no market for the consumption of American-grown flax. Therefore we hold that unless dressed flax is protected to nearly even the wages paid by the American firms here and the importing firms abroad, it would be folly to place a duty on raw, thinking that might foster the growing of flax. It would only serve to kill it, for the importer would only laugh at that duty, since he never pays it only when he gets the chance of foisting his dressed on the customs officer for raw.

We also hold that any increase in the duty on dressed flax will not increase the price to the consumer, and in proof thereof we can refer you to the Dry Goods Economist of January, 1891, and on the same page you will find an importing firm of Grafton, Mass., announcing that the price of their manufactured threads and yarns is increased owing to the increase of 1 cent per pound of duty on dressed flax, and the announcement of the Shrewsbury Thread Works, of Kearny, N. J., a purely American firm, that they wished to enter into a contract with any customer for a period extending even to five years at the old market rates. Barbour, of Paterson, and Smith & Dove, of Andover, Mass., had the same announcement as the Shrewsbury mills. Increase of duty on dressed flax does not mean increased prices to consumer or American manufacturer—in fact, it is a benefit to the latter, as it tends to even the difference in labor between him and the importer.

Our appeal is for a protection to American labor, because, by circumstances over which we have no control, it is brought into competition with labor abroad, which is just as skilled, but which is so poorly paid that it has materially injured us and reduced the revenue.

We again refer to Treasury figures to prove our statement. In 1894 there were 882.36 tons of dressed flax imported; in 1895 it grew to 1,797.70 tons, paying a duty of \$56,431.20, against \$67,237.40 in 1894, while, counting 62 pounds as a day's work, it meant the laying off of about 400 hacklers at \$2, 400 roughers at \$1.50, and 200 boys at 80 cents per day; but the number is much more, as there are tons of dressed flax coming in as raw, owing to the difficulty of judging what is raw and what is dressed.

In conclusion, we ask you to give the above statement your most earnest consideration. This is a case in which labor alone is the recipient of protection accorded, and if the protection is not enough to cover the difference in wages the importer pockets the difference and sells his wares for the same price to the consumer as the American manufacturer, who pays more than double the wages to labor. The 3 cents per pound which we ask to be restored to us if raw be left on the free list is, according to the Treasury report of rating, only 10.16 per cent. This is labor's appeal, and we have full confidence that the results will be satisfactory to us.

Mr. TAWNEY. How does the quality of the material imported compare with that grown here?

Mr. WILSON. I wrote to the Agricultural Department on this subject and received the following letter:

WASHINGTON, December 29, 1896.

DEAR SIR: In response to your letter of the 26th instant, asking for certain statistics in regard to the flax production in the United States, I have to inform you that

I am unable to comply with your request, as I have no available information on the subject. The latest statistics in regard to flax available to this office are those of the Eleventh Census for the year 1890.

HENRY A. ROBINSON, *Statistician*.

Mr. TAWNEY. In Minnesota we burn it. Do I understand you to say that the flax grown in this country is of the same quality as that imported, or could be used for the same purpose?

Mr. WILSON. No; I say it compares with the Russian.

Mr. TAWNEY. Is the Russian imported?

Mr. WILSON. Yes, sir; largely.

Mr. TAWNEY. How many of these factories are there in this country that have establishments running in European countries?

Mr. WILSON. I know of three.

Mr. TAWNEY. Do they dress all their flax over there and bring it here dressed?

Mr. WILSON. Only one does. The others import partially.

Mr. DOLLIVER. Do you represent the workingmen, or the factories?

Mr. WILSON. I represent the workingmen—the hacklers and flax dressers.

Mr. GROSVENOR. What department of flax do you work in—hackling?

Mr. WILSON. Yes, sir.

Mr. GROSVENOR. Did you ever work in the old country?

Mr. WILSON. Yes, sir.

Mr. GROSVENOR. Where?

Mr. WILSON. At Belfast.

Mr. GROSVENOR. Are you able to state the difference between American-grown flax and flax that is used in Belfast? Do we produce an article in this country of the same fabric that they produce?

Mr. WILSON. No, sir. One reason for that is that in New York State they allow the flax to rot on the ground. The frost rots it, and that gives the flax a color which would not be very nice in fabrics.

Mr. GROSVENOR. The great establishments in Belfast use but a small portion of the flax grown in the United Kingdom?

Mr. WILSON. There is a great deal of foreign flax used in the United Kingdom.

Mr. GROSVENOR. They import more than they use?

Mr. WILSON. Yes; they import it from Belgium.

Mr. GROSVENOR. How long has it been since you were in the business abroad?

Mr. WILSON. Going on eleven years.

Mr. GROSVENOR. You say they import Russian and Belgian flax?

Mr. WILSON. Yes; Belgian flax is the finest flax grown.

Mr. GROSVENOR. Do you think that with the full development of the industry in this country we could produce as good an article as they do?

Mr. WILSON. No, sir; the farmers would have to follow the same methods in this country that are followed in Belgium and Ireland.

Mr. GROSVENOR. Would it not do to import raw flax without being hackled?

Mr. WILSON. You could depend upon the imported raw flax.

Mr. GROSVENOR. Then we could import from Belgium just the same as they import from Belgium?

Mr. WILSON. Yes; and I suppose the freight is about the same.

Mr. TAWNEY. The only difficulty, as I understand it, with the American flax is the manner of its treatment.

Mr. WILSON. That has a great deal to do with it.

Mr. TAWNEY. If the farmers here would treat it the same as the farmers over there treat it, would it produce as good an article?

Mr. WILSON. I would not like to say it would produce as fine an article, but they could produce as strong a flax.

Mr. JOHNSON. Where they raise flax for fiber do they save the seed?

Mr. WILSON. No, sir; it is of an oily nature, and if you allow the seed to ripen the oil leaves it and the fiber is bad.

Mr. WHEELER. You say that labor in the United States is 600 per cent higher than in Europe and 100 per cent higher than any country?

Mr. WILSON. Yes, sir; it is 100 per cent higher than in Great Britain.

Mr. JOHNSON. In the western part of this country they raise flax for seed and burn the fiber. Is there any other use to which it can be put?

Mr. WILSON. They might use it for burlaps. It would enter into that.

## JUTE YARN AND BURLAPS.

(Paragraphs 267 and 424½.)

### STATEMENT OF MR. WILLIAM RUTHERFORD, OF OAKLAND, CAL.

SATURDAY, *January 2, 1897.*

Mr. RUTHERFORD said: Mr. Chairman and gentlemen of the committee, I desire to be heard here before this committee in regard to Schedule J. I have come from California in the interest of this schedule, the first time I have been here, and I should like to make a plain statement in regard to our requirements, calling attention in the first place to what we think is necessary to give a reasonable protection. I will refer in the first place to paragraph 267 of the customs law of 1894—

The CHAIRMAN. You are referring to your mills in California. What are you making?

Mr. RUTHERFORD. We are making twine, yarn, and cloth in a great many varieties, all of which are noted here in this statement which I will proceed—

The CHAIRMAN. How long have you been running your mills?

Mr. RUTHERFORD. They have been running—the first mill started there just about 1867, so that would be over thirty years. During the thirty years, however, the industry has largely increased. About fifteen years ago it was doubled, and I will proceed to show in this statement all the various points which I think your committee will require to know about it.

The CHAIRMAN. You may proceed.

Mr. RUTHERFORD. I beg to call your attention to paragraph 267 of the customs law of 1894, which reads: "Yarn, made of jute, thirty per cent ad valorem." For this section in the new law we ask that it read as follows: "Yarn, made of jute, thirty-five per cent ad valorem."

The present law (free list), section 424½, reads: "Burlaps (1), and bags for grain made of burlaps (2)."

We ask that this be transferred to the dutiable list, and that the section shall read as follows: "Burlaps of any width, of flax, jute, or hemp, or of which flax, jute, or hemp, or any of them, shall be the

component material of chief value (except such as may be suitable for bagging for cotton), one and three-quarters cents per pound. Bags for grain made of burlaps, two cents per pound ”

In the present law (free list), section 501 reads: “Gunny bags and gunny cloths, old or refuse, fit only for remanufacture.”

We ask that this paragraph be transferred to the dutiable list and read as follows: “Gunny bags and gunny cloths, old or refuse, fit only for remanufacture, one-half cent per pound.”

We are anxious to have a specific duty on yarn and twine, but there are some difficulties in the way owing to the great variety of sizes. I have samples here if any gentlemen of the committee want to see what I refer to, and I am ready to show them. Referring to yarns and twine, it would be difficult to put it in a specific rate, owing to the great varieties of twine and yarn made, the small sizes requiring a great deal more labor, but the amount stated would cover the whole in a fair manner.

Those Pacific Coast States I represent, and for which I claim the foregoing changes in the customs laws, have been gradually taking their places in the list of manufacturing communities. We had not long ago in full operation 16 woolen mills; also hosiery mills, jute, flax, and cotton mills; also foundries, machine shops, and shipbuilding on a large scale, all of which were prosperous under the protection policy which created them. We are largely engaged also in the production of wool, hops, fruit, borax, sugar, wheat, and lumber. We realized at the recent election that immediate relief was necessary from the evil effects of the general disaster which overtook us, as affecting the above-named interests in 1893, a disaster which brought us industrial stagnation and social discontent. Wage earners, and also farmers who produce wheat, hops, fruit, sugar, and wool, gave their votes willingly for protection, believing this to be the quickest and most efficacious means of righting our wrongs, of giving the Government the needed revenue, and idle men the needed employment. The farmer does not insist upon protection for his wool, fruit, hay, hops, and sugar without according the wage earner the same protection to his labor in the factory, the workshop, and the foundry—a fair and reasonable tariff that will secure living wages.

The sugar, fruit, wool, and grain producers realize that they depend largely upon the well-paid industrious crowds to buy their products. This is the home market, which out there is appreciated as the best.

For the past two years few of our people have been busy. Many thousands can find nothing to do and the home market has largely disappeared; the purchasing power of the people has been crippled. I wish to refer specially to the textile industries of the Pacific Coast, and to state what is considered absolutely necessary for the protection of our industries engaged in jute manufacture into twine, burlaps, bags, and gunny cloth, as described in Schedule J of the present tariff law. California was one of the first States to import the best machinery made for the manufacture of twine, burlaps, and grain bags from jute. This machinery had to be brought around the Horn from Europe, where it was mostly made in those days, and it was installed out in California at great expense. It was the first of the States to engage largely in the manufacture of jute for the home market. In those early days the West was far from the East, and to have our domestic wants supplied at home was an important convenience for the farmer. Ever since 1869 our mills have supplied a large percentage of the jute burlaps, bags, twine, and hop cloths and wool sacks needed in California. This State

is one of the largest consumers of jute goods. Sugar, grain, wool, dried fruits, beans, mustard seed, flour, nuts, etc., are nearly all shipped in jute or cotton bags. There are no grain elevators in California, and no cars or ships are loaded with grain in bulk for transportation.

At first, when farmers began growing wheat, and to ship wool, they had great difficulty in procuring bags and twine sufficient for moving their crops, so fast did the grain trade develop in the fertile valleys of the Sacramento and San Joaquin rivers. Importers took advantage of the scarcity of bags and put up the prices, sometimes as high as 16 cents apiece when occasion permitted. Under the competition of home-made goods, bags were gradually reduced in price until in 1875 the price fell to 12 cents each, in 1880 to 10 cents, in 1890 to 7 cents, in 1892 to 6 cents and under. The standard grain bag of the Pacific Coast is well known in all the jute markets of the world. It is 36 inches long, 22 inches wide, weighs  $12\frac{1}{2}$  ounces, and holds 130 pounds, or 2 bushels, of wheat. The quantity used annually often exceeds 40,000,000. Jute burlaps and other goods had been reduced all along in like proportion with grain bags. Thus all along the home-made products were kept in competition with foreign imports, acting as a leading factor in keeping down prices and preventing corners and pools from being formed to oppress the farmer.

Up to 1894, when the Wilson bill took effect, there had always been a fair duty levied on foreign importations, sufficient to enable the manufacturer to run his mills, pay reasonable wages, and compete with the low-paid labor of Calcutta. A skilled workman in a Calcutta mill is paid 1 rupee, or about 30 cents, a day, while women have less than half that amount, as will be seen by a statement attached hereto, and to which I will refer later.

The Calcutta mills, since the Wilson bill took effect, have been running night and day. Three thousand looms have been added this year (1896) to the weaving capacity of the 10,000 looms previously running. The Wilson bill benefited the Calcutta and Dundee jute industries at the expense of the American. The California mills have never paid more than a small percentage on the capital invested, and during some years they lost money. For several years previous to 1894, or up to the time the mills were shut down, if the State prison jute mill be included, well on to 40 per cent of the requirements of the coast were supplied by the home manufactories.

Owing to the wiping off of the entire duty from bags, burlaps, and gunny cloth by the Senate when the Wilson bill was up there for final passage in August, 1894, this industry was completely wiped out, and the mills closed down.

I may be permitted to remark here that when the bill was first brought into the House of Representatives, as you no doubt remember, it gave us 15 per cent protection on our industries. We wired Senator Voorhees and drew his attention to it, and the bill, when it was in the Senate, was raised by Senator Voorhees, I believe, to  $22\frac{1}{2}$  per cent, but at the last week of the Senate's sitting it was knocked out entirely.

To-day 300 looms are standing idle in Oakland. The preparing, spinning, and other machines, all of an expensive kind, and on which over 40 per cent of duty had been paid to the Government when the machinery was imported, are lying idle, and the laborers, numbering from 800 to 900 people, are out of work. Those people, like many others, are anxiously awaiting the much-desired relief from Congress, so that they may start in again under a just measure of protection to earn an honest living.

As before stated, extraordinary efforts have of late years been made on the Pacific Coast to establish manufacturing industries. Jute manufacture was one well suited to our conditions and requirements. It was not only a surprise to us when the entire duty was wiped off (those jute products named) by the Senate on almost the last day of the session, but it was quite startling and entirely unexpected. No other industry in the whole country was so severely smitten. The California mills being larger producers of cloth than of twine and yarn, it fell heavily upon us. In New Jersey, Pennsylvania, New York, and Massachusetts, where many mills are located, more yarn and twine is manufactured than there is of cloth. They were more fortunate, as the Senators from those States saw to it that some measure of protection was left for yarn, threads, and twine. The requirements of the Western States in jute goods of all kinds are constantly on the increase, and it is important that the jute industry should not be destroyed, but rather increased.

Beet sugar manufacture out there alone is destined to be a great and important industry, and in connection with this business much cloth and textile supplies are required. One thousand acres of beets call annually for \$4,000 worth of the products of the loom, to be used in the process of converting the beet into sugar and shipping it. Thus one industry helps another, and the whole community is benefited. Then the borax trade, when in a prosperous state, calls largely for filters, bagging, and other woven material.

There is appended to this statement a comparative list of wages paid in the United States and in Calcutta, British India, to show your committee the exact cost of manufacturing jute in both countries. This statement shows the difference in the cost of manufacturing jute in both countries, and demonstrates the amount of duty required to give protection to American labor. Great Britain is being hurt by Calcutta, and ultimately Calcutta is to be the great competitor of the world, until Japan should take a part in it, which she has begun to do. I have seen goods already coming into San Francisco made in Japan that no American or Indian could match for cheapness and beauty in the textile. It comes in competition with your cotton wraps for covering horses and your cheap wool wraps in this country, and will ultimately drive them out.

In conclusion, permit me to refer again to Schedule J, paragraph 392½, which reads as follows: "Bagging for cotton, gunny cloth, and all similar material, suitable for covering cotton, composed in whole or in part of hemp, flax, jute, or jute butts, free."

Also, paragraph 424½, which reads: "Burlaps, and bags made for grain of burlaps, free."

Under those two paragraphs importers are bringing in many kinds of goods free of duty, and claim they are entitled to the free entry of all such under the reading of those clauses. Those goods I refer to as coming in free include horse blanketing made of jute, colored and checked plaids, coarse carriage robes, jute paddings, jute drilling, jute tarpaulin, twills and jute print cloths, bleached jute sheetings, sugar filter and straining cloth, etc.

The CHAIRMAN. I understand those are being entered as burlaps on the free list?

Mr. RUTHERFORD. Yes, sir; and I have samples of the goods imported. If you will excuse me I will open the samples. I have larger samples if anyone cares to examine them, but these are little cuttings [exhibiting same]. Those were never intended to come in free——

Mr. DOLLIVER. How, then, did they happen to come in free?

Mr. RUTHERFORD. I was just going to explain as I proceed, and if you will allow me I will just proceed.

That those were never intended to come in free is the contention made here, and the Government is being deprived of its just revenues. The wording of those clauses is so indefinite and yet so comprehensive it is not surprising that importers, under a misconstruction of their meaning, evade the law. The result is that American manufacturers of mixed jute cloths and of coarse woolen and cotton and jute dyed fabrics are unjustly made to suffer. It need not be a surprise under these circumstances should importers come forward and advise that no change be made.

These statements are humbly and respectfully submitted to your honorable committee with the hope that the present conditions will be changed by the fixing of a tariff sufficient to protect the industrious citizens of this nation in their respective fields of usefulness.

Respectfully submitted.

WILLIAM RUTHERFORD.

(For the California Cotton Mills Company, California Jute Mills Company, Ames & Harris Co., California, and the Ames & Harris Co., Portland, Oreg., and others.)

#### TABLES SUBMITTED BY MR. RUTHERFORD.

*Cost of manufacturing 100,000 yards 10½-ounce 40-inch burlaps in the United States.*

To make 100,000 yards of 10½-ounce 40-inch burlaps would require 66,500 pounds of raw jute, 33¼ tons, and the labor of 142 persons working ten days, ten hours each day.

33¼ tons raw jute, at \$60 per ton..... \$1, 995. 00

Help (per day each):

|                                            |          |
|--------------------------------------------|----------|
| 2 batchers men, at \$2.....                | \$40. 00 |
| 2 softeners, at \$1.75.....                | 35. 00   |
| 8 carders, at \$1.....                     | 80. 00   |
| 12 drawers, at \$1.....                    | 120. 00  |
| 2 rovers, at \$1.....                      | 20. 00   |
| 2 helpers, at 75 cents.....                | 15. 00   |
| 12 spinners, at \$1.25.....                | 150. 00  |
| 12 doffers, at 60 cents.....               | 72. 00   |
| 8 spoolers, at \$1.....                    | 80. 00   |
| 1 band sewer, at \$1.....                  | 10. 00   |
| 1 oiler, at \$1.25.....                    | 12. 00   |
| 2 truck boys, at 75 cents.....             | 15. 00   |
| 1 machinist, at \$3.....                   | 30. 00   |
| 1 spinner, at \$3.....                     | 30. 00   |
| 1 second hand, at \$1.50.....              | 15. 00   |
| 1 watchman, at \$2.25.....                 | 22. 50   |
| 9 copers, at \$1. 17.....                  | 105. 00  |
| 3 beamers, at \$2.....                     | 60. 00   |
| 3 warpers, at \$1.25.....                  | 37. 50   |
| 46 weavers, at \$1.25.....                 | 575. 00  |
| 3 loom fixers, at \$2.25.....              | 67. 50   |
| 2 finishers, at \$2.....                   | 40. 00   |
| 1 measurer, at \$2.....                    | 20. 00   |
| 2 folders, at \$2. 25.....                 | 45. 00   |
| 2 packers, at \$2.25.....                  | 45. 00   |
| 1 stamping and shipping clerk, at \$4..... | 40. 00   |
| 1 oiler, at \$1.75.....                    | 17. 50   |
| 1 foreman, at \$3.....                     | 30. 00   |

1, 829. 00

Power, oil, forces, insurances, depreciation of plant, and other price charges. 420. 00

Total cost..... 4, 244. 00

Cost of 100,000 yards in California, \$4,244, or 4.24 cents per yard.

As a yard weighs 10½ ounces and costs 4.24 cents per yard, 16 ounces would cost 6.46 cents. 6.46 cents is the net cost of 1 pound of manufactured burlaps in the United States.

*Cost of manufacturing 100,000 yards of 10½-ounce 40-inch burlap in Calcutta and laying same down in California.*

Requiring 231 persons in Calcutta working ten days, ten hours each day.

|                                                                                       | Rupees. | Anna. |
|---------------------------------------------------------------------------------------|---------|-------|
| 33½ tons raw jute at 150 rupees per ton .....                                         | 4,987   | 8     |

| 1 foreman, at 8 rupees .....                                                          | 80      |       |
| 1 second hand, at 4 rupees .....                                                      | 40      |       |
| 1 bookkeeper, at 6 rupees .....                                                       | 60      |       |
| 1 pay clerk, at 8 rupees .....                                                        | 80      |       |
| 1 engineer, at 8 rupees .....                                                         | 80      |       |
|                                                                                       | 2,419   |       |
| Power, oil, insurance, interest, repairs, depreciation, and other fixed charges ..... | 1,190   |       |
| Freight, commission, insurance, brokerage, from Calcutta to San Francisco .....       | 1,220   |       |
| Total cost .....                                                                      | 9,816   | 8     |

Counting the rupee equal to 31 cents United States money, that would make total cost of 100,000 yards, \$3,043.11.

As a yard weighs 10½ ounces and costs 3.04 cents per yard, 16 ounces would cost 4.63 landed in the United States.

*Comparison of costs.*

|                                                                          | Cents. |

| Cost of manufacturing 1 pound of burlap in Calcutta, British India ..... | 4.63   |
| Cost in the United States greater than that in India .....               | 1.83   |

The following mills in the United States manufacture jute in some form: Chelsea Jute Mills, New York; Dolphin Jute Mills, Paterson N. J.; Planet Mills, Brooklyn, N. Y.; Tucker & Carter Cordage Company, Brooklyn, N. Y.; Allentown Spinning Company, Allentown, Pa.; John Good Spinning Company, Brooklyn, N. Y.; Travers Bros., New York, N. Y.; Schlechter Jute Cordage Company, Philadelphia, Pa.; John T. Bailey & Co., Philadelphia Pa.; Finley & Co., Philadelphia, Pa.; Wilmington Manufacturing Company, Wilmington, Del.; Thomas Jackson Company, Reading, Pa.; Sutherland & Edwards, Paterson, N. J.; Pearson Cordage Company, Boston, Mass.; Ludlow Manufacturing Company, Ludlow, Mass.; California Jute Mills, San Francisco, Cal.; San Quintan Jute Mills, San Quintan, Cal.; Lamons & Robertson, Paterson, N. J.; Plymouth Mills, Plymouth, Pa.; California Cotton Mills, Oakland, Cal.; Walla Walla Jute Mills, Walla Walla, Wash.

Mr. RUTHERFORD. Now, the words "of similar material" is a very wide phrase. It includes this material here [exhibiting]. That is similar material to cotton wrapping; no one can question it. If you take the goods which come in for binding hops, of which 70,000 or 80,000 bales are grown on the Pacific Coast, or cotton bagging, or heavy cloth ready for wrapping cotton bales, the graduation between the two is difficult to determine, and the custom-house officers, inspectors, and appraisers are puzzled, and they can not do better under the present law.

The CHAIRMAN. That is the result of putting burlaps on the free list?

Mr. RUTHERFORD. Yes, sir.

Mr. EVANS. How much more expensive is it to make the burlaps than the samples you show?

Mr. RUTHERFORD. The expense of making burlaps depends entirely upon the size of the yarn. If the yarn is small, it requires a great deal more labor, and if the yarn is thick you can turn out a great deal more in the machine, because to every foot there is so much less twine. In the weaving, every pick of heavy yarn is put in quicker than small picks of fine yarn, and consequently the coarse cloth can be made at half the price for the labor, in some cases, of the fine cloth.

Mr. EVANS. I am referring to these particular samples.

Mr. RUTHERFORD. That sample I showed there would cost nearly as much, this big sample, as the finest burlap, but this little bundle of samples are expensive because they are dyed. You will notice these solid colors are coming in free, dyed solid, and the dyers of this country have the right and just claim for dyes they have brought in here to dye goods with. No wool could compete with them, jute costing 3 cents per pound and wool costing 24 cents and 50 cents when it is washed. All colors are coming in. You will notice all colors are coming in free of duty. Those goods are imported free, although we have tried to stem the current.

The CHAIRMAN. Does the term "burlap" admit of so wide an application as that? What is the meaning commercially and technically of the word "burlap"?

Mr. RUTHERFORD. It means a coarse, textile fabric; burlaps and hessian are two conventional phrases. It was just fifty years ago since men in England and Scotland were trying to weave jute. I have seen machines made which cost thousands and thousands of dollars. They could not manufacture jute, and they had to go on experimenting for years with the jute, and in London nobody knew how to work it; but gradually they began to work it with a little oil and a little soap, and ultimately they became acquainted with its nature; and the names, I do not know how they originated or what they were derived from, but "burlaps" and "hessians" are the names which include everything when you come to a popular reckoning of it.

The CHAIRMAN. Would any plain weaves of jute be considered as burlaps under the law?

Mr. RUTHERFORD. Yes, sir; not only plain, but twilled cloth; ornamental goods, too.

Mr. PAYNE. Your statement that these goods came in free was questioned a moment ago. I understand you made efforts to prevent them coming in free. Will you state what efforts you have made recently, and what the result was?

Mr. RUTHERFORD. I told the inspector in Mr. Tucker's office, who is the chief appraiser—I told his assistant that was horse blanketing; it was called plaid, and used to be imported by a great many gentlemen

I know. Mr. Ayers, I think, used to import the horse blanketing and pay a big duty, and I stated it was not fair to bring that in, and it was never intended under that act. The act, as I understand it, put burlaps free so as to benefit the farmer who raises grain and the cotton grower in his cotton, and it was just to bring in those goods, but they read the clause "burlaps and bags made for grain of burlaps, free," and "all such material," and say the clause is comprehensive, but I believe they appealed to the New York Board, and I think just now it is in abeyance, and they allow no more of it to come in, and it has been stopped.

The CHAIRMAN. This difficulty has all arisen under the act of 1894, and if the burlaps were dutiable the difficulty would never have taken place.

Mr. RUTHERFORD. There was never any trouble before that. They read over this very carefully here, "bagging for cotton, gunny cloth, and all similar material." Now this bagging comes in for hops greatly at San Francisco. If the crop of hops is poor and there are no hops, rather than carry that bagging they send it to the East, and sometimes to New Orleans and Galveston, for wrapping cotton in instead of carrying that for a year or two. Hops have been at 5 cents instead of 25 cents, and the cloth had to be disposed of, and so hop bagging is very little different from cotton wrapping, and it is all under the general head of "similar material." It does not say anything about color. Suppose you put a dozen stripes on the cotton wrapping and that passes; suppose you put in two dozen colored stripes and that passes, where is the limit to be?

Mr. DALZELL. Under what section do you claim these goods come in, 424½ or 392½?

Mr. RUTHERFORD. I will just read the section here. I looked it up in the book I have in my pocket.

Mr. DALZELL. Under what section are they admitted?

Mr. RUTHERFORD. In section 392½.

Mr. DALZELL. Under the term "similar material"?

Mr. RUTHERFORD. Yes, and bring in the goods there. They are burlaps made of jute.

Mr. DALZELL. Why should they not come in under this section of 424½, "Burlaps and bags for grain made of burlaps"?

Mr. RUTHERFORD. This is a California grain sack, known all the world over as a grain sack for 2 bushels of wheat, of which we got 40,000,000 last year, and everybody knows this to be a burlap [illustrating]. That is called in England and India a "hessian" and in this country a "burlap." It is the standard size. This sack is 22 by 36 and it weighs 12½ ounces.

Mr. PAYNE. These come in, you contend, as burlaps and other similar material?

Mr. RUTHERFORD. Yes, sir; similar material—under the two words "similar material."

Mr. DALZELL. Similar material is provided for "as composed in whole or in part of hemp, flax, jute, or jute butts." It is not contended these come in for covering cotton?

Mr. RUTHERFORD. Yes, sir; we get cotton from Galveston. We import from Galveston and Texas points 6,000 bales a year in the California mills. Many bales are covered with piece cloth like that [illustrating]. Last year in particular a great many of them were covered with fine cloth. You see the thing is this: If the heavy cotton burlaps, or cotton wrapping, weighs 15 pounds and costs 4 cents a pound, that

is 60 cents. They have gone up to fine cloth and called it cotton wrapping that only weighs half as much as that heavy cloth and not twice the price, so it is cheaper to cover the cotton sometimes with the fine cloth. Now, I have here, Mr. Chairman, the cost of the manufacture of a hundred yards of 10½-ounce burlap. All of these standard bags are made of 10½-ounce burlaps 40 by 36 inches; that is the standard of all grain bags, and, unless by special order, they are made 10½-ounce weight, 40 inches for the width, and 36 inches long.

Now, I have figured that here as the standard, so that everyone might know it. I have a long statement of wages, but it is not necessary, I think, to go over it unless you want me, and I will only show that the total is \$4,244 for 100,000 yards made in this country. Now, in dividing that up we find that is 4.24 cents to the yard. Now, we take a pound of that at the same proportions and it will cost 6.46 cents to the pound, or 4.24 to the yard. Now, if we take Calcutta, to make 100,000 yards in Calcutta of the same cloth, pay insurance, commissions, brokerage, and everything connected with it, to land it in San Francisco with all the items stated here will cost 9,816 rupees and 8 annas, counting the rupee equal to 31 cents—which, I think, it is scarcely equal to at present, but we will put it at that, so the Indian statement will not be less than it should be—and it comes to \$3,043.11 in United States money landed in San Francisco or New York, and there is very little difference when freights are reasonable—about \$5 or \$6.50 a ton measurement, which is 40 cubic feet.

So I say this amount of cloth landed in this country costs \$3,043.11. As a yard weighs 10½ ounces, too, the cost of 1 yard of Calcutta cloth landed here is 3.04 cents and 1 pound will cost 4.63 cents, or a difference of 1.83 cents per pound, a little over 1¾ cents a pound for the cloth in the piece. The bales generally come in 2,000 yards. Now, a great deal of that cloth, as you will see from the returns, comes into this country to be cut up into bags. In making the bags about three-eighths or half a cent is the cost of cutting up, doubling, sewing, hemming, filling, and baling the bags; about three-eighths of a cent to the bag is the cost of the work for making this cloth into bags, and consequently if the bags come in free, if we are to be protected in the same measure as against the cloth, we have to have a little more protection on bags. It is astounding what a quantity of cotton is needed. Now, the mills interested with us in California—we have fully 500 looms in California—and the only mill running just now is the State prison mill, and they are at their wits' end (the State prison directors), for I have spoken to them, and they are wondering how to get the thing to pay, and they get their labor free.

Mr. TAWNEY. How long have the mills been idle?

Mr. RUTHERFORD. It was in August, 1894, the bill giving us free burlaps was passed, and the mills were shut down that year; that was about the end of 1894.

Mr. COBB. Are you sure you are absolutely correct about the price of these foreign goods?

Mr. RUTHERFORD. Yes, sir; and I would be very glad if any of the Members here would take this and examine it, or have any expert examine it acquainted with foreign exchange, insurance, etc. I leave this statement with the committee, and I invite inspection of it.

Mr. COBB. Have any of your California textile plants been removed to this country where labor is so cheap?

Mr. RUTHERFORD. No, sir; but I will tell you one little point I did not touch on this branch of the subject, but if you will permit me I will

tell you what has happened. As I stated in this paper, there are sixteen of these mills running in California. One of the largest was running during the war and I believe it made the best blankets in the United States for both the South and North, and supplied an immense quantity of goods at that time, running day and night. That mill until a few years ago employed a thousand people, with about sixty big dye vats for dyeing goods, and had an immense plant at Black Point. That mill, when the difficulties were so disheartening and things looked so bad, had been trading all the time with the Japanese, and the Japanese saw this mill and bought it complete, except the engine, which was too big. I went and bought the engine, a 600-horsepower engine. I sent six or eight men there, trained mechanics and machinists. They took down that engine. I went there at the time and saw the work proceeding, and I saw in that mill a whole crew of Japanese brought over from Japan in a steamer for the very purpose of taking down that machinery. I saw that, and spoke to them, and they took down all the machinery, tacked all of it with labels in their own writing, and packed all that plant, except the building, away in the steamer, and sent with it these men who were brought over. I never understood how they could bring them over to this country to do the work that rightfully belonged to the machinists in our State, who are idle by the hundreds, but that is a fact, and that is only one instance. There are only three mills running in California—

Mr. COBB. Have any jute mills transferred their plants?

Mr. RUTHERFORD. No; but I will state about the mill I am immediately connected with. I have worked in mills since I left school in the textile industries of England and Scotland, and I am acquainted with all textile industries, and the mill I am connected with has a large cotton department immediately adjacent to the jute plant. Some time ago, when our jute plant was standing idle, a Japanese merchant, about whom we inquired as to his honor and integrity and capability to perform whatever contract he might make with us, offered us a fair proposition to take our mill to Japan and locate it at Osaki, where since 1882 there have been over sixty cotton mills built, but it was considered it would be better to take our mill to Yokohama, where coal was 90 cents a ton and we could secure labor of Japanese women for 8 sen—8 sen is about 5 cents, the Japanese yen only equaling 53 cents and the silver yen weighing more than an American dollar. We have a lot of them coming into California. The Japanese girls would work for about 6 cents, or from 8 to 10 sen. We were told we could get all the Japanese help we wanted for 22 sen, which would be about 12 cents of our money.

Mr. TAWNEY. Could you own the mill over there?

Mr. RUTHERFORD. We investigated the matter. I am an American citizen and have been, I am proud to say, for many years, and we found we could not own any property there. No alien can own property in Japan, and the proposition we got was to be satisfactory, because we could make a contract that the Government would be called upon to enforce, that they would give us a reasonable amount for the plant when they took possession, which would be about four years after it started. There is one peculiarity in Japan which we found out from our investigation, that nearly all the mills there are furnished with Canadian and Scotch machinery. There is no mill in Japan that employs any European labor after they start; not one of those 62 mills, I am assured, has any European or American labor after running. Everyone is paid off and the foreign element is cleared out, and when I found we could not own the property and have control of it as I did not want to become a Japanese citizen—I

thought America was far better—we stopped our negotiations, in the hope that something would be done to enable us to run here. Now, there is a mill at Santa Rosa standing idle; there is one at Petaluma standing idle; one at San Jose standing idle; there is a mill at Woodland which has been standing idle, but I think it was burned a short time ago. There are mills in Oregon standing idle to-day that have run for thirty years, and all these are facts which makes us anxious about the future.

Mr. TAWNEY. And you attribute the idleness of the mills to the present tariff?

Mr. RUTHERFORD. Yes; particularly where there is hosiery made. It is impossible for them to compete with the hosiery of Germany. I know it. I saw the German goods thirty years ago coming up to the best standard of the French and English makes, and to-day Germany leads——

Mr. RUSSELL. What are the hosiery mills making, cotton or woolen hose?

Mr. RUTHERFORD. This very one I was speaking of as going to Japan——

Mr. PAYNE. Is your mill located at Oakland?

Mr. RUTHERFORD. Yes; on the water front. We have the harbor and railroad right at the mill and can load everything into cars or boats. There was a hosiery mill in Oakland, a large one, employing 300 persons, which was taken away—a part to British Columbia and a part to Provo—but I understand it is standing idle. You can get good wool at 6 cents that used to be 20 cents in California, but it is impossible to run and meet these nice, elegant goods that come from Germany.

Mr. TAWNEY. Is the difference in labor the only disability under which you labor in the manufacture of these goods?

Mr. RUTHERFORD. No; I was commencing to say, Mr. Chairman, although I would never have said anything about it unless it had been mentioned, we pay more in this country, taking it all in all, for insurance, taxes, etc. I was over in Europe last year, in the beginning of 1895, and I was there when I was a boy, and I knew the inside of all the mill business and manufactories pretty well when I was in school and after that, and in Europe the general insurance is far lower than here, and you can get water in any of these old European cities for almost nothing if you start a manufactory, but in this country you have to pay for water, and we have to pay high taxes. We have the University of California in sight of our mill, which costs the State a good many thousand dollars, and we have to pay taxes to keep up that university and educate our growing young men to be useful in chemistry and textile sciences and everything of the kind, and we are willing to maintain the university, but all this has to be taken into account of the manufacture. Then for water—we pay for water for our mills to the water company 50 cents per 1,000 gallons. In any city of Europe you can get it for 2 pence, which is 4 cents, and in many cities they give the water free.

Mr. TAWNEY. How does the transportation rates here compare with the transportation rates over there?

Mr. RUTHERFORD. When it is a long distance, it is very low. From Aberdeen to London, which is fully 500 miles, you can take a ton of goods for about 42 shillings. That is not any cheaper than it is in this country, and for long-distance transportation rates are cheap, comparatively speaking.

Mr. PAYNE. You say that some of the cities give water free. That is simply to manufacturing concerns?

Mr. RUTHERFORD. Glasgow, for instance; I do not know that Glasgow gives it free, but almost free.

Mr. PAYNE. Do not some of the countries discriminate in favor of manufacturing concerns in taxes generally?

Mr. RUTHERFORD. Yes, sir. They have that power sometimes to do so, and the State of California would do it, but the Judge here reminds me—I was going to state that our constitution, drawn up about twenty years ago, is against allowing any concessions to a manufacturer in the way of taxes or anything, but we would readily be assisted by the State if they could do so consistently, as the industries are so few. Now, in 1895 there were 200 young men who went away from San Francisco and Oakland to the Central American States to grow coffee. They were idle for months and could not get anything to do, and this past summer there were so many idle men, young educated men who ought to be able to find something to do, that they went away to Alaska to see if they could get gold by mining, and nearly all of them came back, as it was a failure. What are they going to do if we shut up the mills? In Oakland there are from 16,000 to 20,000 young people, counting the suburbs. Oakland proper probably has about 100,000 inhabitants. Now, there are 20,000 young people; what are they going to do? That is a great concern of the people out there, and to show you just how a manufactory influences a community I want to show you a striking example of the benefits.

You see this hose here [illustrating with a piece of cotton hose]. Now, until quite lately there was no hose made in California. I was instrumental in starting the manufactory to make this, and the result has been that we have got this now for the whole Pacific Coast made in a California manufactory at a price that no one can find fault with. When we had to buy hose from the East or import it from England, sometimes, when it was scarce, they put the price up nearly double. Now it is always ready, and this you get in California from American cotton shipped from Houston. Now, the communities are glad to see these things; they are interested in these things. The cotton interests of the East, I must say, were fairly protected, although in some instances I know by investigation the tariff rates on small fine yarns is not enough, but on yarns like these I think we can work along and defy competition. Now, we have made thousands of feet of this in California, and if the goods are not first-class they come back on us, but they could not come back on anybody, say in England, two years after they got it.

Mr. TAWNEY. How large a plant had you engaged in the manufacture of that kind of hose?

Mr. RUTHERFORD. It is under separate management, although I took an interest in starting it—probably about \$20,000.

Mr. TAWNEY. Is there more than one factory?

Mr. RUTHERFORD. Just one factory.

Mr. TAWNEY. When was it established?

Mr. RUTHERFORD. It was started, I think, just about the beginning of this past year—about the end of 1895, probably—but I really forget now.

Mr. TAWNEY. How does this industry now compare, which you say is reasonably well protected under the present law, with the industries which are engaged in manufacturing these other textiles?

Mr. RUTHERFORD. Of jute?

Mr. TAWNEY. Yes. Has this industry prospered more than the other?

Mr. RUTHERFORD. Oh, yes; but there is not much to invite anybody to go into it. I would have done better had I put the money in the bank and received 5 or 6 per cent, because of the insurance risk, etc. We are glad to get the money put in to start the thing with, if we do not get anything more than the original plant.

Mr. EVANS. Is that material there, of which you have shown samples, the natural color of the jute burlap?

Mr. RUTHERFORD. That is the natural color, but I was going to show you the bleached jute after it is bleached, when it gets old, gets yellow.

Mr. EVANS. But this is the natural color [exhibiting]?

Mr. RUTHERFORD. Yes, sir; this is the bleached jute and you will see the difference.

The CHAIRMAN. The duty on burlaps not exceeding 60 inches of width, under the act of 1890, was 1½ cents a pound, and on bags 2 cents, making a differential of 3 cents for bags. How did the burlap industry prosper on that duty of 1½ cents per pound; I mean the burlaps used for bags?

Mr. RUTHERFORD. It was just little enough, Mr. Chairman. We never like to pay a weaver less than \$1. We will not keep them, because they are not useful if we just pay them \$1, and we have them making \$1.50 a day there, and often a weaver will be employed on three looms, and it depends entirely on what they could do. I would rather not have any help in a mill than at a dollar's pay. I never have paid a competent girl less than a dollar, and if you have a duty of 1½ cents you can barely pay those wages. They work hard ten hours, and in the South they work from eleven to twelve to thirteen hours in the cotton mills, and when I go South I find that out. The climate there is very suitable for manufacturing all the winter; it is like this room nearly, and they have no expenses for heating the mill substantially, and the climate around the bay is beautiful. There ought to be a hundred mills there.

The CHAIRMAN. Was your mill making burlaps not exceeding 60 inches wide from 1890 to 1894?

Mr. RUTHERFORD. Yes, sir. We made the best quality up to 76 inches.

The CHAIRMAN. And from burlaps not exceeding 40 inches in width?

Mr. RUTHERFORD. Yes, sir; and not exceeding 40 inches in width.

The CHAIRMAN. Was your mill making burlaps for bagging not exceeding 40 inches in width from the passage of the act of 1890 up to 1894?

Mr. RUTHERFORD. Yes, sir; very successfully before the duty was taken off jute, and we were never better off and the people were well paid, and we made more cloth during those two or three years than any two or three years before because we were pushed.

Mr. DOLLIVER. Do you know how the jute-bagging industry prospered elsewhere in the country during that time; whether it grew up in the South in this cotton territory?

Mr. RUTHERFORD. Mr. Adoo put a lot of money in a mill at Galveston and started in making jute because he saw we were making it successfully, but I believe now it has passed into other hands. I do not know, as I have not been there for three or four years. There was a mill started there and I saw the machinery myself. Now, we paid

women \$1 a day and men \$1.75 to \$2.50, firemen \$3, and engineers \$100 a month.

Mr. PAYNE. I suppose, then, young men were not going to South American countries?

Mr. RUTHERFORD. None that I knew of, but they were in that beautiful city stagnating during the time of these industrial troubles. California is a peculiar place. It has warm weather the year around and a man will experience no inconvenience living in tents, and these idle people began to collect in 1893 or 1894 to the industrial armies which started there, and they gathered from all quarters. They came and located near San Francisco, and I was one who helped to feed them. We provided accommodations for them, but we were glad to get them away after being there two or three months, and they went from there East—to Washington. We were glad to get them away. That was the beginning of our trouble, and these mills and industrial enterprises stopped.

The CHAIRMAN. Previous to the act of 1894 there was a large manufacture of grain bags, weaving grain bags from refuse cotton; that is, from the material remaining after making other kinds of goods. Do you understand that industry still continues, or has it practically been destroyed by the act of 1894?

Mr. RUTHERFORD. That is the refuse cotton—

The CHAIRMAN. The refuse left after manufacturing sheeting, etc.

Mr. RUTHERFORD. It is almost killed. I do not think there is much done in it. Then I was going to show the bags that are coming in competition now with the cotton white bag for almonds, for dried prunes, and other goods which are grown up and down the coast there in immense quantities [exhibiting]. That is the kind of white bag that takes the place of the cotton bag which used to keep the mills in New Hampshire running.

The CHAIRMAN. Have you any knowledge respecting the making of bags from jute, that is any practical knowledge; have you ever had anything to do with that industry?

Mr. RUTHERFORD. I worked at it while I was a boy at 14.

The CHAIRMAN. Are you able to tell whether the differential allowed by the act of 1890 of three-eighths of a cent per pound was sufficient to retain the industry in large part here in making bags from burlaps?

Mr. RUTHERFORD. Well, three-eighths was not so bad. I think if it had continued we could have gotten along nicely with the three-eighths. There is a great deal of cotton yarn sewn around a bag in hemming it and we have got a machine now which turns the bag outside in, and does it cheaply.

Mr. EVANS. To come back to my question. You say this is the natural unbleached color of the burlap?

Mr. RUTHERFORD. Yes, sir.

Mr. EVANS. Of the jute woven into the burlap cloth?

Mr. RUTHERFORD. Yes, sir.

Mr. EVANS. Mr. Steele says you do not say that is the natural—

Mr. RUTHERFORD. That is the natural color of jute, but I must explain that to you, however. The jute comes from India which is used for our bagging, and when it is taken out the first thing that has to be done with the jute when it comes out of the bale is to shake it out and put oil on it, and during the process of "batching," the technical term, the jute changes color to a little darker.

Mr. EVANS. That is just what I want to get at. I want to know the process by which the jute is changed from this color.

Mr. RUTHERFORD. That originally in the bale had been a little more

silvery like in appearance and the color is changed in the process of "batching."

Mr. EVANS. What is the change?

Mr. RUTHERFORD. You can not spin jute——

Mr. EVANS. Is there any change in the jute at all in making these goods?

Mr. RUTHERFORD. Not at all in the process of weaving.

Mr. EVANS. Now, I want to ask you, as that is the purpose I had in view, if there is not a great deal of jute changed in color for the purpose of making it resemble hemp?

Mr. RUTHERFORD. Well, I suppose sometimes it is done.

Mr. EVANS. But, is not a very great deal of that thing done?

Mr. RUTHERFORD. Personally, I have no cognizance of it, as we do not do it out there.

Mr. EVANS. It is not done, then, in the western part of the country?

Mr. RUTHERFORD. But I know the dark-colored jute is often the strongest you can buy, and the dearest. It depends entirely upon the soil. Buyers of jute in India, where it is grown——

Mr. DOLLIVER. Is it produced altogether in India?

Mr. RUTHERFORD. Yes, altogether in India.

Mr. PAYNE. I understand you do not sell burlaps for hemp?

Mr. RUTHERFORD. No, sir; I have never sold any for hemp.

Mr. EVANS. Is that practice employed on the Pacific Slope at all where goods are offered as hemp when made out of jute?

Mr. RUTHERFORD. I could not say. I could if I saw the material, because jute is short and brittle like straw, while hemp is tough. There is oil in flax, hemp, cotton, silk, and all those other fibers, but there is no oil in the Indian jute, and that is why it needs oil artificially.

Mr. EVANS. What sort of mill do you operate; what are the products?

Mr. RUTHERFORD. The products of the mills we operate are duck, twine, etc. We make probably in our mill for the fishing trade of the Pacific Coast alone from cotton 200 tons of what is termed seine twine.

Mr. EVANS. You manufacture cotton goods and then you manufacture what other sort of goods?

Mr. RUTHERFORD. Jute.

Mr. EVANS. You do not use hemp?

Mr. RUTHERFORD. We never used any hemp.

Mr. EVANS. And you manufacture cotton and jute goods?

Mr. RUTHERFORD. Yes, sir.

Mr. EVANS. Do you get your raw jute free?

Mr. RUTHERFORD. Raw jute has been free since 1890, I think.

Mr. EVANS. You are in favor, if I understand you, of putting a duty on the manufactured article? Where does jute come in competition with hemp anywhere on the Pacific Coast?

Mr. RUTHERFORD. It comes, I suppose, in competition with hemp, and I would be glad to see a little duty on jute.

Mr. EVANS. That is what I am after. What do you think ought to be the duty on jute?

Mr. RUTHERFORD. I myself eight years ago took very active measures to try to grow flax on the Pacific Coast, and grew it, and hemp, too, and ramie; and in the course of time I am confident if we had encouragement agriculture would pay engaged in the growing of hemp and flax.

Mr. EVANS. You think the climate and soil of California would produce good hemp?

Mr. RUTHERFORD. Yes, sir; it could not be better.

Mr. EVANS. What do you think ought to be the duty on jute now?

Mr. RUTHERFORD. Well, if you put it on the raw jute you will have to give a little more on the finished article, and there is where the trouble comes in. I would like to see it myself on the raw product.

Mr. EVANS. I was approaching it a little anxiously for the reason a good many manufacturers want free raw material and protected fabrics, and I wanted to know what your views were on that subject.

Mr. RUTHERFORD. Well, if I thought we could get the finished article at a rate to pay these men the wages needed, I would say \$5 or \$10 a ton on jute, but I thought it impractical in the present condition of public sentiment. I know in England where I was trained in the schools, I was trained in a free-trade country which a hundred years ago was one of the great protection countries, and that is what made her rich.

Mr. RUSSELL. Do you manufacture binding twine?

Mr. RUTHERFORD. No, sir; there is no binding twine used in California, or very little. The grain is all cut in the field and——

The CHAIRMAN. I wish to make a statement to go into the record from the official statistics which are before me. Under the act of 1890 a revenue of a little over \$2,000,000 was received from the duty on imported burlaps and a little over half a million dollars on imported bags, and hence we had a revenue from those two sources up to 1894 of \$2,500,000 a year, which was all thrown away by the act of 1894.

Mr. TAWNEY. How do the importations compare?

The CHAIRMAN. They were increased.

## BURLAP AND BURLAP BAGS.

(Free list, paragraph 424½.)

### STATEMENT OF MR. J. M. BEMIS, OF BOSTON, REPRESENTING THE BURLAP BAG MANUFACTURERS' COMMITTEE.

SATURDAY, *January 2, 1897.*

Mr. BEMIS read the following paper, and filed with the committee the two annexed letters:

On December 23 the burlap bag manufacturers of the United States met in New York. At this meeting there were represented, either in person or by proxy, nearly all of the leading manufacturers in this line. More than seven-eighths of the entire burlap bag manufacturing interest was represented. At this meeting the undersigned were appointed a committee to prepare and present to your committee an argument in favor of a rate of duty on imported burlap bags which would enable our factories to retain the work that they have had for many years past. We are also instructed to recommend the free entry of the bag widths of burlap cloths (that is, burlaps 60 inches in width and under) if consistent with revenue necessities. If the free entry of these is not consistent with revenue necessities, we are instructed to ask that the rate of duty be made as low as is permissible from a revenue standpoint.

#### DUTY ON BAGS.

We ask your committee for a small duty on bags for revenue and protection, as they have been made here, are made here, and will continue to be made here with a modicum of protection. The bag manufacturers

ask only to be put on an equal footing with Calcutta manufacturers by the imposition of a duty on imported bags equal to the difference between labor here and labor there. Any less rate of duty is offering a premium to the foreign makers, which we know your committee would not intentionally do.

The small protection of 7 per cent on the finished bag, or thirty-five one-hundredths of a cent per pound specific, does protect and does result in employment of our labor.

As against Dundee or English wages we could live without protection, but against the 10 cents per day labor of India we need the small protection asked, or in time must surrender the work to Calcutta.

#### FREE BURLAP CLOTH.

The bag manufacturers' raw material is burlap cloths, and it should be free of duty. Burlap cloth is not a luxury. It is the cheapest fabric obtainable for wrappers for grain, flour, wool, ores, furniture, and many other purposes. Also, in compliance with many requests from our constituents, the millers and grain shippers, we now respectfully ask for entry free of duty of burlap cloth 60 inches in width and under, being those widths which are used for bags.

First. Because protective rates in former tariffs have utterly failed to establish the manufacture here of these widths of burlap cloth. The raw material is all produced in India, where both the climatic and labor conditions are suitable for its production at the lowest cost. One of the best arguments in favor of protection is that by establishing home manufacture of those articles made from domestic raw materials we save freights and commissions to factories abroad on the raw materials, and freights, commissions, and tariffs in returning to this country the finished product. Such is not the case with burlap cloth, as the raw material in any event must be imported from India. By importing the raw material we would pay freight and middlemen's charges on the gross weight instead of upon the net weight of the finished product. The machinery for manufacturing burlaps must be bought abroad. The first cost of a jute mill in this country is about twice as much as the cost of a similar mill abroad. This in itself would be a serious handicap to start with.

Second. The cheapest labor in the world is now thoroughly established in the manufacture of burlap cloth at Calcutta, and on a very large scale. By reason of this cheap labor Calcutta manufacturers have found it easy to compete with Dundee, and have increased their productive capacity so largely within the past few years that the industry in Dundee is feeling the competition very keenly, and the manufacturers are constantly looking out for some specialty to work on instead of running on the standard bag goods, which are produced in such large quantities and at such low prices by the Calcutta mills.

Third. Calcutta has many millions of dollars invested in this industry. Nearly all of the prominent men of Calcutta are connected directly or indirectly with the jute trade. The relationship of this industry to the Government at Calcutta is about the same as the relationship of the cotton manufacturers of the United States would be to our Government if every cotton factory in the country was moved to Washington, and every prominent citizen of Washington directly or indirectly interested in the cotton business, and one member of the Cabinet appointed by the Washington Board of Trade, of which cotton manufacturers would be the dominating spirit. We recite all this to indicate how quick and

how strong would be the pressure brought to bear upon the Indian government in favor of an export duty on raw jute, which would serve as a protection to the Calcutta manufacturers, if this country now imposes a high protective tariff on bag widths of burlap cloth.

Of course any such export duty would provide for a drawback on such jute as might be manufactured at Dundee or at any other point in the United Kingdom. Any attempt on our part at this late date, by the imposition of a high protective tariff on bag burlaps, to deprive the Calcutta jute mills of the privilege of making into burlaps the raw jute which, in any event, must be imported from Calcutta into this country, would unquestionably be met by an export duty levied in India upon all raw jute shipped. Any such export duty would be a severe blow to this country and certainly ruin any mill embarking in burlap manufacture under any rate of protection possible, besides jeopardizing every other jute industry. An export duty on jute means also an export duty on jute butts, which would also ruin the cotton-bagging manufacture and force importations, enhancing the cost on every bale of cotton grown. While one of our bag manufacturers was in Calcutta within a year this probable export duty, under certain conditions, on jute was under discussion. We also herewith attach an article on this subject taken from *Capital* of October 7, 1896. The *Capital* is the principal commercial review published in India.

The subject of customs duties has again raised some discussion in private circles as to the propriety of imposing an export duty on jute shipped to foreign countries, either as supplementary to or in substitution or reduction of other taxes.

The reasons why England continues to refrain from export duties do not in any way affect India. In England export is confined to manufactures and to articles freely supplied by neighboring countries. In the case of jute, India has a monopoly of the production, and every foreign nation, without exception, imposes a heavy duty on this article in its manufactured state. It is therefore not only right and just that we should put an export duty on jute to foreign countries, but it is most desirable that we should thus adopt an easy method of reducing other taxes, such as the income tax or the salt tax, which come directly out of our earnings.

There is in this country practically no manufacturing of bag qualities of burlap cloth to protect. Practically no attempt was made under the McKinley bill to manufacture bag burlap cloth, although the Wilson committee was petitioned to maintain the McKinley rates for protection. We did not see any statement to the Wilson committee from the jute mills making kindred fabrics that the McKinley rates were not protection. Therefore we can only conclude that the McKinley rates were protection, but that the mills could make more on kindred products than on cloth for bags.

Now, if the McKinley rates were protection, yet no goods were made here for bag purposes, why reinstate the McKinley rates? Are the McKinley rates on bag burlap cloth asked to be reenacted simply to uphold the rates on kindred products?

As bag makers and for our constituents, the millers, grain shippers, and many others who use burlap cloth for various purposes, we respectfully ask your honorable committee if a necessary article like bag burlap cloth must be taxed very high at a duty that does not protect, simply to be rated in line with a few specialties where the duty does protect, particularly as these specialties are only a small portion of the whole quantity of jute goods used in this country? We do not include in this estimate the coarse bagging for cotton, which is made of jute butts, and is a separate industry in itself.

Therefore we pray your committee will consider:

First. If not inconsistent with revenue necessities, burlap cloth (60

inches in width and under) free; bags made of such cloth thirty-five one-hundredths cent per pound. No secondhand bags to be returned free of duty.

Second. If some revenue must be obtained from burlaps, then we pray your committee will make the rates: Burlap cloth as above, one-half cent per pound; bags made of such cloth, eighty-five one-hundredths cent per pound. No drawback on bags exported, and no free return of any bags.

Third. If, however, your honorable committee can not see your way clear to secure sufficient revenue admitting burlap cloth free, or under our second suggestion, then the maximum rates which the bag manufacturers think should be imposed are: Burlap cloth as above, seven-tenths cent per pound; bags made of such cloth, 1 cent per pound. If these rates are adopted by your committee, then we ask that the general drawback privileges be retained, but no free return of any bags, even if made in this country.

#### NO FREE ENTRY OF SECONDHAND BAGS.

We trust your honorable body will debar entirely any possibility of free entry of any secondhand bags on the ground of their having once paid a duty, either as cloth or bags. No Secretary of the Treasury has ever yet been able to form and enforce regulations in regard to the return of secondhand bags, the production of this country (the cloth or burlap having once paid a duty), and limit such importation to American-made bags. Frauds of many kinds and deceptions have been practiced. In fact the law heretofore regarding this service, and any regulations possible, only offer a premium for fraud. To such an extent had fraud been practiced prior to free bags under the Wilson bill that several large establishments abroad found employment in collecting these bags, mending them, and returning them here under fraudulent certificates.

The identification of printed home-made bags for flour and for other products being simple and sure, owing to the brands on the bags, name of miller, etc., stamped on them, also the name of the factory making them, the drawback was almost invariably collected, which debars their return free of duty.

But the Calcutta-made grain bags were not entitled either to drawback or to return free of duty under the McKinley bill. Most of these imported grain bags go into Pacific ports, and comparatively few bags are made on the Pacific Coast. Yet it was mostly the bags shipped from the Pacific Coast that found their way back here free as being home-made bags. The result was that millions of foreign-made bags came back free, some that had received drawbacks came back free, some bags that never had been in this country, either as burlap cloth or bags, came here free. Millions of bags came in free on which the Government should have had the duties.

#### NEW IMPORTED BAGS.

These are increasing, and will continue to increase, even if hereafter they are made dutiable. The so-called centals are the greatest in volume. These mostly, although not wholly, go to the Pacific Coast. The importation of centals commenced and grew to large volume under the Morrill bill, with a differential of 10 per cent over burlap cloth. Ten per cent ad valorem was more than three-eighths cent differential

per pound specific under the McKinley bill. The McKinley bill was greater differential than the bag manufacturers now ask. The Calcutta manufacturers have so perfected and reduced the cost for making this special bag that we as bag manufacturers do not think it politic to advocate a rate that would shut it out. We do trust, however, that your honorable committee will grant us the small differential we do ask, that we may retain the making of such bags as we have made heretofore.

#### SECONDHAND BAGS IMPORTED.

These also are coming in free in increasing volume. These come mostly, although not wholly, into the Atlantic ports. The quantity will soon equal or exceed the new bags imported. The quantity coming in in 1896 has been reduced by at least 2,000,000 by the action of a London dealer who attempted a corner and held at a cornered price. But as these seconds are always gauged in price by the price of new bags, and new bags being low owing to free burlaps, and also new imported bags, the corner failed, and at this writing these are offered at lower prices, and will increase the receipts in 1897. This corner experiment and the prices under former dutiable tariffs, and free under the Wilson bill, gives us the diagnosis complete of the workings as to secondhand bags coming here. The prices obtainable here are based on new bags, so that if these secondhand must pay a duty to come in, then the foreign price is just less the amount of the duty assessed. In other words, your committee can turn a part of the price that these second hand will sell for here into the Treasury as duties, or pay the foreigners the full price obtainable here if admitted free. Repairing these seconds ready for sale costs as much as making new bags. Our bag manufacturers would very much like to employ the labor here to do the work, but do not see our way clear to suggest the means to that end. But it is a very decided reason why no secondhand should be returned unless dutiable, whether they have ever been in this country before or not, either in the shape of goods or bags.

#### SPECIFIC DUTIES.

We are strongly in favor of specific rather than ad valorem duties. Specific rates are much more just as between the various importers. Specific rates are exactly alike to the Calcutta firm which invoices goods to its own house here and to the American importer who has no Calcutta establishment. Without entering that field covered by the name fraud, you can readily see that a Calcutta jute mill having its own branch establishment in this country could invoice its goods to that branch at a price less than it would accept in Calcutta for those same goods. It could do this and still be well outside of the line defining fraud. It would simply be adding the manufacturer's profit to the Calcutta price in one instance, and in the other billing the goods at net cost and allowing the profit to appear upon the books of the American branch.

#### UNDERVALUATION OF THE RUPEE.

The custom-house valuation of the Indian rupee for the last quarter of this year is 23.3 cents. We suppose this is the bullion value of the silver contained in the coin. The actual value of the rupee in the exchanges of the world during the same period has averaged about

30½ cents. An ad valorem duty assessed on a given number of rupees at the rate of 23.3 cents each really amounts to 23 per cent of the duty less than the rate which is intended by the tariff. As this undervaluation does not apply to the pound sterling, which is valued by the customs at about its actual average exchange value, the undervaluation of the rupee amounts to a discrimination of 23 per cent of the duty in favor of India and the Calcutta manufacturer as against England and the Dundee manufacturer.

#### CHANGING MARKETS.

The regulations provide that in case of an advance in the market price between the time of purchase and the time of shipment, ad valorem duties shall be assessed upon the higher price—that is, the price at time of shipment. In case of a decline in the market, the regulations provide that the ad valorem duty shall be assessed on the purchase price. These regulations, varying the actual amount of duty according to the date upon which the goods happen to have been bought, unnecessarily add to the risks of doing business and increase the speculative element in legitimate commerce.

#### IMPORTED BAGS.

No Secretary of the Treasury has ever been or ever will be able to formulate and enforce regulations for collecting ad valorem rates that would compel honesty in the importation of bags as to count, weight, and quality of goods used. On second-hand bags these remarks apply with still greater emphasis. Specific rates are much preferable in every way.

We believe it has heretofore been considered good Republican doctrine to allow free entry on products or goods that have no competing industry here. Your honorable committee may now find it desirable to change the policy somewhat to meet public sentiment. During the past few years radical tariffs have resulted in the complete turn out of power of the party making them. The net results, economically speaking, have been millions of dollars added to our national debt. So the bag manufacturers beg pardon for suggesting to your honorable committee that radical tariffs are an expensive luxury, and pray that the new Dingley bill may be a model one and a moderate one.

The business sentiment of the country is against the reenactment of the higher rates of the McKinley bill, and is also against the low rates of the Wilson bill. The high rates in the former were against revenue, owing to light imports of the high-rated articles, and in the latter against revenue, owing to the low rates of duty. The free list in both was entirely too large, and was a reducer of revenue. The expense for clerical work at our custom-houses is equally great in passing free or dutiable goods. Please pardon us if we suggest that your committee largely if not entirely eliminate the free list. Even burlap cloths, which are entitled to free entry if anything is, may have to be put in at revenue rates for revenue purposes.

If imported articles having no competing product here are rated low for revenue, and all imported articles having competing products here are rated dutiable equal to the difference between our well-paid labor and the underpaid labor making the goods, your committee, in our humble opinion, will obtain the necessary revenue, and will make a

tariff that will satisfy two-thirds of our people and remain in force for years, or until economic conditions change.

All of which is respectfully submitted.

J. M. BEMIS, *Chairman*,  
FRANK CASCADEN,  
GEO. A. WAGENER,  
*Bag Manufacturers' Committee.*

DECEMBER 26, 1896.

Mr. J. M. BEMIS,  
*No. 89 State Street, Boston.*

DEAR SIR: I had the Minneapolis millers together the other day, and after talking the matter over we decided that we did not know enough about it to make any representation before the Ways and Means Committee. We do not want any duty put back on jute or burlap, but we would not object to a duty on the manufactured bags large enough to protect our home manufactories. We believe we will have influence enough with Congress to prevent any duty being put on jute or burlap cloth. Mr. Tawney, of the Ways and Means Committee, will be in Minneapolis, and I shall see him to-day.

Yours, very truly,

CHAS. A. PILLSBURY.

MINNEAPOLIS, MINN., *December 28, 1896.*

J. M. BEMIS, Esq.,  
*No. 89 State Street, Boston.*

DEAR SIR: At a meeting of the Minneapolis millers held on Saturday, the matter of a tariff on jute was brought up, but no special action was taken, owing to the fact that Mr. C. A. Pillsbury expects to be in Washington in time to appear before the committee, and he can speak, not only for the Minneapolis millers, but for the Millers' National Association, of which he is the president.

As millers are not protected by any tariff legislation and do not expect to be, they are naturally averse to the imposition of any duty that will increase the cost of the packages they use in putting up their product. They are not, however, opposed to a duty on jute bags sufficient to cover the difference in the cost of manufacture in order that the cloth may be imported and the bags made up in this country.

Yours, truly,

WASHBURN-CROSBY CO.  
CHAS. J. MARTIN.

#### ADDENDUM TO BAG MANUFACTURERS' WRITTEN ARGUMENT.

PHILADELPHIA, *January 8, 1897.*

##### COMMITTEE ON WAYS AND MEANS:

On January 1 your chairman asked us for an average net price for bag burlaps landed on the dock in New York during the past few years. We quote 8-ounce 40-inch for convenience. All other bag burlaps are practically in proportion as to prices. Inclosed please find statement which speaks for itself.

Before the Wilson committee J. M. Bemis made the following remarks: "We believe if burlaps should be admitted free the benefit would accrue to the foreigners and not to our consumers," etc. Predictions must fall always before the bare facts. There is now good reason for believing that the down turn in price has not yet reached bottom.

##### JUTE MILLS IN INDIA.

We also inclose statement of these and invite your attention to the number of new mills. The building of these new mills has been a matter of record for a year past. The completion has been delayed for numerous causes. When they are ready to open and commence business, where the orders are to come from to start them is a mystery.

Owing to famine in India there is but little home demand. It is our firm belief that if there is not another jute mill built in the world for four years the supply of burlap cloth would equal or exceed the demand.

The only advance in price possible for burlap cloths must be the result of a short jute crop, advancing the raw material. As jute is a one-country crop, a failure may occur any year. Had this country any competing producing countries from which to draw this raw material, then protection for this industry would be very desirable.

FRANK CASCADEN.  
J. M. BEMIS.

*Net price of 40-inch 8-ounce burlap cloth landed on the dock in New York.*

|                                                               | Two years<br>under Mc-<br>Kinley tariff<br>(Aug. 28,<br>1892, to Aug.<br>27, 1894). | Two years<br>under Wil-<br>son tariff<br>(Jan. 1, 1895,<br>to Dec. 31,<br>1896). |
|---------------------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| Average price .....                                           | \$3.59 $\frac{1}{4}$                                                                | \$2.67                                                                           |
| Less duty on 8 ounces (1 $\frac{1}{8}$ cents per pound) ..... | .81 $\frac{1}{4}$                                                                   | (a)                                                                              |
| Net price, excluding duty .....                               | 2.78                                                                                | 2.67                                                                             |

a No duty.

The consumer paid the tax under the McKinley tariff; he saved it under the Wilson tariff, and not only that, but he saved eleven one-hundredths cent per yard (4 per cent) additional by decline in the foreign price. However, this may be owing only to the depressed condition of trade the world over.

## ANOTHER STATEMENT FROM THE BAG MAKERS' COMMITTEE

PHILADELPHIA, *January 11, 1897.*

## COMMITTEE ON WAYS AND MEANS:

The cardinal points in the bag manufacturers' argument are—

First. Duty on bags: Protection or differential duty does result in the disbursement of money to American labor for several times the amount of duties on foreign-made bags paid into the United States Treasury.

Second. Bag burlaps: Protection has not heretofore, and would not hereafter, in our opinion, result in the disbursement to labor of more than a small part of the duty paid into the United States Treasury on bag burlaps because jute is the growth and the monopoly of one country. The same country is prepared to manufacture its own raw fiber into bag burlaps cheaper than any other country in the world. Therefore, protection as a principle, or from an economic standpoint, is indefensible. In the next ten years it would cost our country many millions of dollars more than any possible benefit derived.

Third. Revenue would be the only reason for imposing any tax on bag burlaps, and for this the rate deserves to be as low as on hundreds of other items now with burlaps in the free list. Proof mailed.

FRANK CASCADEN,  
J. M. BEMIS,  
*Bag Committee.*

## BURLAP AND JUTE FABRICS.

## STATEMENT OF MR. E. R. BIDDLE, OF NEW YORK CITY.

SATURDAY, *January 2, 1897.*

Mr. BIDDLE said: Mr. Chairman and gentlemen of the committee, I will not take up your time with any oral statement. I prefer to submit my statement in writing, which I will do in a day or two; but I would ask a moment or two of the committee to make a remark in regard to the samples that our friend from California submitted, which he says are being admitted into the San Francisco custom-house as burlaps free of duty. If these samples that I have referred to are admitted into the San Francisco custom-house as burlaps free of duty, I want to say they are not admitted into the New York custom-house free of duty.

I am an importer of burlaps and jute fabrics, and as such I should not enter them as burlaps. I consider them advanced manufactures of jute, which should pay the duty provided for them—35 per cent. I looked through these samples and it seems to me there is only one sample there that can be properly called a burlap. Several of them are twilled, whereas a jute burlap is a plain fabric of single warp and filling, made of single yarn. Many of these samples are twilled and double warped. As far as the coloring and striping of burlaps is concerned I do not think that has anything to do with it. A burlap made of jute of the texture, I say, or made of flax, jute, or hemp, as the tariff says you may do, is not the less a burlap because it is either dyed a different color or striped.

In the last ten years I have imported many thousand pounds—yes,

many thousand bales of burlaps—and among them I have imported many that have a stripe in them. They have always been admitted as burlaps. It has never been questioned.

I will say, before closing, that if those fabrics, such as the gentleman from California has submitted, are entered at the San Francisco custom-house as burlaps free of duty, I would suggest that the Treasury Department be notified of the fact and that it be communicated to the collector at San Francisco at once.

The CHAIRMAN. Are bagging burlaps, that are imported, none of which exceeds 60 inches in width, made exclusively of jute?

Mr. BIDDLE. No, sir; a burlap, according to the wording of the tariff, is a coarse, common fabric, made of jute, flax, or hemp. A burlap is a fabric I should imagine about a hundred years old. It is known in the foreign market as a hessian; originally it was made of flax or tow, about fifty years ago, when jute was discovered, burlaps of flax or tow were mixed with jute, but as the burlap made of jute began to manifest itself as an article of commercial cheapness it gradually supplanted the burlap of flax. But a burlap, either made of flax, jute, or hemp, is a burlap all the same, provided it is coarse, common weaving, not twilled.

The CHAIRMAN. Are not the burlaps manufactured for bags made exclusively of jute?

Mr. BIDDLE. Mostly so, although I import a few made of flax. There are so few made of flax that it practically cuts no figure.

The CHAIRMAN. That is, the jute is cheaper than the flax?

Mr. BIDDLE. The jute is much cheaper, and when a person asks for a burlap, it is generally considered that he wants a fabric made of jute, although there are some people who want a high-grade burlap, and they ask for a burlap made of flax or flax mixed with jute. I have imported that kind of burlaps.

The CHAIRMAN. Have you in your acquaintance with the manufacturers of burlaps in this country known of any manufactured in this country less than 60 inches in width.

Mr. BIDDLE. There are some I believe made in the St. Quentin, also the Walla Walla prisons.

The CHAIRMAN. Are any made in the State prison?

Mr. BIDDLE. I know some were formerly made in the State prison, but not to any great extent. I understand that there are bags made of the burlap cloth—that is, a small bag. I would not call it manufacturing burlaps, but nevertheless it is a bag made of burlap cloth.

The CHAIRMAN. Have articles been imported as burlaps under the free clause of the act of 1894 that were not intended for bagging purposes?

Mr. BIDDLE. Yes; there are burlaps that are made of flax of rather fine texture that contain more threads to the square inch, counting warps and filling, and less in width than the burlap which is used for bagging purposes. There are oilcloth foundations and covering for merchandise for transportation.

The CHAIRMAN. So that, although those articles were put on the free list under the guise of furnishing a cheap material for bags, they are being imported free for many other purposes?

Mr. BIDDLE. They are being imported free, and according to the wording of the law they are entitled to come in so. But as a matter of fact, it seems to me that those finer grades, especially of flax, could be eliminated.

## JUTE BURLAPS, BAGS, ETC.

## STATEMENT SUBMITTED BY W. B. CUNNINGHAM, OF NEW YORK.

NEW YORK, *December 31, 1896.*

## COMMITTEE ON WAYS AND MEANS:

Burlaps are used for grain and feed bags, peanut bags, flour bags, and for packing, etc.; also by floor-oilcloth and linoléum manufacturers as the foundations for their productions. In communications to former Ways and Means Committees I stated that if the duty was removed from burlaps consumers would get the entire benefit of such reduction. That has been absolutely the case, owing to the keen rivalry and competition in business. Neither among importers, who sell the burlaps, nor among floor-oilcloth manufacturers, who use burlaps, has there been any trust—nothing but keenest rivalry and competition. And the same is true of the sources of burlap production, viz, Dundee and Calcutta. The rivalry between these two places for the American burlap trade is so intense that prices are cut down very low.

As business is conducted on such a narrow margin by burlap importers and floor-oilcloth manufacturers, if a duty were to be imposed on burlaps, the consumers would have to pay same, and as oilcloths are largely used by the poorer classes it would seem unfair to make them pay such extra cost, i. e., a duty on burlaps.

Burlaps are not produced in this country and never can be produced here against the cheap labor of Great Britain and the still cheaper labor of India, unless a very high protective tariff is imposed and likely to be maintained. Against that the agriculturists (who are a large body of voters) would protest. The California and Pacific Coast wheat crop is packed in burlap bags, a very large quantity of which are annually used.

The only grounds on which a claim might be made for a slight duty on burlaps would be for revenue; but it seems to me sufficient revenue might be raised on other articles—luxuries, etc.—rather than a duty on a common, staple, necessary article such as burlaps, largely used for the products of farms and by floor oilcloth and linoleum manufacturers. The latter have little enough protection already, and if a duty were imposed on burlaps they would require a corresponding increase of duty on their production, as even on the present basis of free burlaps large quantities of foreign linoleums are now being imported. It would be unfair, therefore, to tax the American floor oilcloth and linoleum manufacturers by imposing a duty on burlaps (a raw material to them), and leave them to be defeated by importations of foreign oilcloths and linoleums made on free burlaps and with much cheaper labor, interest, etc., in the cost of these foreign-made goods compared with the cost (high wages, etc.) of producing oilcloths and linoleums in America.

Floor oilcloth and linoleum manufacturing is a thoroughly established American industry, with a very large amount of capital invested in the business, and should be protected against further importations of foreign-made goods.

Bag manufacturing is a large and old-established industry in this country, using enormous quantities of imported burlaps. That industry should be given some protection—say, three-eighths to one-half a cent per pound on new and secondhand burlap bags. If duty should

be imposed on burlaps, it should be a small specific rate—say, one-half to three-fourths of a cent per pound and bags three-eighths to one-half a cent additional.

On jute carpeting, owing to the wide range of values, ad valorem duty is the best. I never heard of undervaluation in jute carpeting. As the goods are cheap and used by the poor classes, the present rate of 20 per cent seems high enough. After the present act became law, I know of a domestic manufacturing concern that obtained a shipment containing a large and varied assortment of jute carpeting and rugs from abroad, in order to decide whether they would continue to manufacture the goods or supply their customers by importing foreign-made goods. They did not import any more, as they found the foreign-made goods, with 20 per cent duty, freight, and other charges, cost more than domestic-made goods. It seems to me, therefore, that there is no need to increase the present rate of duty on jute carpeting.

If the duty should be changed from ad valorem to specific, a reduction should be made on the McKinley rate of 6 cents per square yard, which, on some grades of jute carpeting, was equal to over 100 per cent ad valorem. On the average, of all the jute carpeting produced in America, the McKinley rate of 6 cents per square yard was a very high rate of duty.

I may say that I am a seller of burlaps, and have been in the business for about nineteen years. Prior to that I was over four years in Calcutta, and before going to Calcutta I was for nearly four years in the office of a Dundee jute manufacturing concern, so ever since I left school I have been in the jute or jute-goods trade.

WM. B. CUNNINGHAM.

**STATEMENT SUBMITTED BY MENTE & CO., IMPORTERS, OF NEW ORLEANS AND CINCINNATI.**

NEW ORLEANS, *December 31, 1896.*

COMMITTEE ON WAYS AND MEANS:

We are heavy importers of burlap cloth and manufacturers of burlap bags with factories in New Orleans and Cincinnati, Ohio. Burlap cloth is manufactured of jute fiber, which is not grown in this country, and consequently all burlap cloth used in the United States must be imported from abroad. Fully 90 per cent of this burlap cloth is made into grain bags. As this cloth is imported without competing against any American product used for the same purpose, it would therefore be a direct tax to place a duty on this material. The cost of manufacturing burlap cloth into bags is only 5 per cent of their value, and this cost is the same abroad. To this particular point we respectfully request your attention.

We understand that it is the purpose of a few American bag manufacturers to urge your honorable body to recommend a schedule allowing burlap cloth to enter free and a duty of from 15 to 25 per cent on imported manufactured burlap bags. American consumers of bags much prefer imported made bags, because being made from the looms they are not only more uniform but by far stronger and better. Besides this, there are imported annually into the United States free of duty nearly one hundred millions of secondhand burlap grain bags, which are consumed by American farmers because they are slightly cheaper than new bags, while they answer all purposes equally as well. Thus it can

be seen that any duty on imported bags which would be greater than that placed on burlap would prevent their importation, thus compelling the consumer to use new bags at a greater cost. These bags would be supplied by the American manufacturers who, we understand, are urging free burlap, and this would not add any revenue to the United States Treasury. The burden of this discrimination would therefore fall entirely upon the American consumers.

However, as it is the desire of your committee to rearrange the tariff so as to increase the revenues of the Government, we would respectfully request that if it be found necessary to place a tariff on burlap cloth and burlap bags, that it be a small one, and that burlap bags carry the same duty as placed on burlap cloth, because, as stated herein, the cost of manufacturing burlap bags being only 5 per cent of the value of the cloth, and this cost of manufacturing being the same abroad as it is here, a greater duty on manufactured bags in favor of the cloth would prevent importation of bags, and will compel American consumers to use domestic-made bags of inferior quality and deprive them of the advantage in using these millions of cheaper secondhand bags which they are now using.

MENTE & Co.,  
*Of New Orleans and Cincinnati, Ohio.*

**STATEMENT SUBMITTED BY RANLETT & STONE, IMPORTERS, OF  
NEW ORLEANS, LA.**

NEW ORLEANS, LA., *January 1, 1897.*

**COMMITTEE ON WAYS AND MEANS:**

We understand that it is the intention of a number of bag manufacturers to petition your honorable committee to place a duty of 15 to 25 per cent on imported bags made of burlap cloth, and to allow burlap cloth to come in free, or if a duty be placed on the latter to have a considerably higher one levied on the manufactured bags, against which we would respectfully protest, on the ground that such action would be injurious to and a discrimination against the importers of manufactured bags, would be a direct tax on the farmers, who would be compelled to confine themselves to the use of American-made bags at a higher cost, would be class legislation for the benefit of the manufacturers, and would defeat the object your committee, we believe, has in view, of increasing the revenue of the Government.

We are ourselves importers of both burlaps and burlap bags. Burlap cloth is manufactured from the fiber of the jute plant, which is not grown in this country, nor are there, we believe, any (excepting one, the California State penitentiary) manufactories for converting this fiber into cloth; consequently a duty on the cloth would neither benefit growers of jute nor manufacturers of jute cloth.

A much higher rate of duty upon manufactured bags than upon cloth would simply result in the importation of jute goods being confined exclusively to the cloth, depriving the Government of any increased revenue and the farmer the benefit of competition.

Should your committee deem it expedient to make a discrimination in duty in favor of the burlap cloth, we would respectfully point out the justness of exempting from such discrimination second-hand burlap bags, which are very largely imported in this country, and principally for the use of the Western farmer. Said second-hand bags are almost

entirely shipped originally from this country new, filled with its products, and, under a duty tariff, having once paid duty, should be exempt from a second, or subject to a merely nominal one.

RANLETT & STONE.

### UNIFORM DUTY ON ALL BAGS AND BAGGING.

NEW YORK, *December 31, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We are importers and dealers in new and second-hand jute bags, also burlaps, which are now on the free list, and we take this method of presenting our views, rather than appearing in person.

If there should be a duty imposed, there should be no discrimination as between the made bags and burlaps, but a uniform duty on all bags and bagging. Burlaps are a complete manufacture as imported, and are used without further expense for various uses other than in the making of bags, which only requires cutting to size wanted and to be sewn by machine, at a cost of about  $2\frac{1}{2}$  per cent.

H. BREWER & BRO.

### JUTE PROPAGATION A FAILURE IN THIS COUNTRY.

ST. LOUIS, MO., *December 28, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

As the jute schedule will doubtless have the attention of your honorable committee in the forthcoming consideration of tariff revision, we beg leave to offer a few suggestions, as the article burlaps, or Hessians, enters quite largely into the requirements of the milling fraternity, both for domestic and export purposes, for flour and feed.

Protective rates in former tariffs have not, as yet, resulted in the propagation of the jute plant in this country to any material extent or the manufacture of burlaps from importations of the fiber into America; nor is it likely that in the near or even remote future the plant will be grown in the United States or goods manufactured in any sense commensurate with the commercial necessities of the case. Doubtless this was one of the reasons why burlaps were relegated to the free list in the last bill, but possibly not the main reason. In any event, they are now on the free list, and, if not absolutely necessary from a revenue standpoint, we think they ought to remain there. If, however, the necessity for revenue seems to make it important in the estimation of the committee, then we would recommend that only a revenue rate be imposed—say one-half to three-fourths cent per pound, with a small differential duty on bags over the burlaps.

It would appear that no attempt has ever been made by bag manufacturers looking toward trusts or combinations, and a small differential on the bags, over the cloth, is essential to equalize in a slight measure the very low wages of the East Indies.

As far as our knowledge extends, there never has been a strike in a bag manufactory in America, and it would seem that they are entitled to a small protection—say to the extent of three-tenths cent per pound—over the cloth, and this would not prevent large importations of made-up bags; they will still come in. So this small fraction on bags over the cloth of three-tenths cent will have the effect to increase the revenue, if

revenue must be obtained, and as duty on imports is the best possible means to such an end, and as extremely low rates or free importations result in diminished revenue, or higher rates act prohibitively; and in neither case is the Government deprived of the necessary wherewithal to meet current expenses.

Possibly there are other lines in the list of importations which are comparable to the burlap material, where climatic conditions and pauper labor enter in as a natural factor to guide the committee in their decisions, whereby moderate revenues may be realized and thus avoid extremes that yield no result, either from lack of revenue, or on the other hand very extreme protection, resulting in hardships and criticisms attending an excessive and possibly prohibitive tariff.

But the jute plant is peculiarly adapted to India, and the very low scale of the wage earner in that part of the world, amounting practically to pauper labor, will serve to retain the propagation of the plant in the far East, as well as to continue the manufacture of the fiber into cloth for commercial purposes for the world at large in the years to come.

E. O. STANARD MILLING Co.,  
E. O. STANARD, *President*.

#### TAX ON BAGS WOULD HURT THE FARMER.

LIVE OAK, CAL., *January 8, 1897.*

##### COMMITTEE ON WAYS AND MEANS:

I note that Mr. Rutherford, claiming to speak for the interest of the people of California before your committee, advised a tariff of 2 cents on burlap. Mr. Rutherford or any other man from the Pacific Coast knows that a tariff on bags or bag material is almost a direct discrimination against the farmers of this coast, as they are required to ship all grain in bags, while east of the Rockies they can ship in bulk. A tariff of that kind would cost the grain growers of this coast more than \$1,000,000. The industries he represents have never given employment to more than 200 people outside of the State prison, and it is a great injustice to saddle such a tax on the already impoverished farmer whom the last four years have driven to the wall. Let us give them a chance to live, as they comprise a very necessary, useful, and intelligent part of our people.

H. LUTHER.

---

BUFFALO, N. Y., *January 11, 1897.*

DEAR SIR: If the industry of producing jute cloth was in existence to any extent in this country, and were conditions favorable to the business, there would be some reason for putting a duty on the imported article, but we understand that jute cloth of such coarse make as is required in the fertilizer business can not be produced here at anywhere near the price at which the goods are made in India, where labor is so cheap and the material at hand.

We use in our own business annually from 600,000 to 700,000 of these bags, and our product is sold entirely to the farmers. Should this duty be imposed, it would necessitate our adding that much to the present price of our goods, which the farmer would have to pay for, and no one, as we understand it, would be benefited, for at the rate of duty

proposed the business could not be successfully carried on here in competition with the cheap manufacture above referred to. It is a tax that would fall directly upon the farmers, and instead of adding to his burdens something must be done to help him if we want prosperous times.

CROCKER FERTILIZER AND CHEMICAL COMPANY.

### BURLAPS SHOULD PAY DUTY.

ALLENTOWN, PA., *January 9, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

We take the liberty of writing you with regard to paragraphs 267, 268 and 269 of the present tariff bill. Our works here are specially laid out for spinning jute. We employ, if running full, which we have never been able to do under the Wilson bill, 550 hands. During the first year of the Wilson bill our works ran a little over 25 per cent of the time. It improved a little over that as time went on, but all we were able to do during the past six months was 50 per cent time. The admission of burlaps on the free list was a great injustice under the Wilson bill, and entailed not only loss of revenue to the Government, but loss to the manufacturer, and a great percentage of the looms that were at work in this country during the McKinley bill were not only stopped, but broken up by this injustice.

We are of opinion that the paragraphs above referred to should read as follows:

267. Yarn made of jute, single, in skeins and in the gray, not finer than 5 lea or number,  $1\frac{1}{2}$  cents per pound. Jute yarns finer than 5 lea or number, or if twisted, dyed, or bleached, or in any way advanced beyond single gray skeins,  $2\frac{1}{2}$  cents per pound. Twines made of jute, 40 per cent ad valorem.

268. Cables, cordage, and twine composed of New Zealand hemp, istle, tampico fiber, manila, sisal grass or sunn, 1 cent per pound.

269. Hemp and jute carpet and carpetings, 6 cents per square yard.

The duty on burlaps ought to be placed back where it was under the McKinley bill, which would bring in a revenue of \$1,500,000 to the Government, and would be nothing but justice to the manufacturer, in the face of the increasing amount of these goods made in India and in Germany, and latterly in Russia.

ALLENTOWN SPINNING COMPANY,  
D. R. MALCOLM, *Managing Director.*

NEWARK, N. J., *January 11, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

We wish to call your attention to the fact that we are makers of all kinds of mill supplies used in flax, jute, and hemp manufactories. We have \$100,000 employed in our business, and employ 50 hands. We have not been injured very much directly by the Wilson-Gorman bill, but we can assure you that we are of the victims who have suffered indirectly owing to the fact that all of our customers have either closed down entirely, part of their machinery stopped, or else running short time, and in consequence we have not been able to give anything like steady employment to those now in our employ, and we have had to cut down our force also.

As far as we can learn, the cause of our business falling off has been

owing to the free importation of burlaps and all kinds of jute coverings. We know for a fact that one of our customers, the California Jute Mills Company, of Oakland, Cal., has not run its mill one hour since the Wilson-Gorman bill went into effect.

We trust that you and your associates on the Ways and Means Committee will endeavor to give our customers the protection they so much need, and in that way give us steady employment for our employees.

ROBERT CRABB.

## BUCKRAM.

NEW YORK, *January 9, 1897.*

### COMMITTEE ON WAYS AND MEANS:

We wish to call your attention to buckram. This article is manufactured from imported burlap in this country. The expense of converting same from the raw-material burlap into buckram increases the value 100 per cent, and should not be imported free by calling same "stiffened burlaps," as the commercial name is and always has been buckram, never known or sold as stiffened burlaps, and could not be used for the purpose burlaps are used for. It is undoubtedly a manufacture of jute not otherwise provided for, and should come in under a duty equivalent to 35 per cent, thus giving us domestic manufacturers of the article protection.

G. E. DANIELS & SON.

## FLAX AND JUTE THREADS AND YARNS.

(Paragraphs 267, 274, and 277.)

### RATES RECOMMENDED BY MR. A. R. TURNER, VICE-PRESIDENT OF THE BARBOUR BROS. COMPANY, OF PATERSON, N. J.

NEW YORK, *January 8, 1897.*

### COMMITTEE ON WAYS AND MEANS:

We are the selling agents for the Barbour Flax Spinning Company, of Paterson, N. J., who, when the mills are running full, employ 1,200 to 1,500 people. We are greatly troubled because of the undervaluation of yarns and thread imported into this country, and must respectfully urge that, as far as may be practicable, specific duties be established in place of the present ad valorem rates. The reports of the Treasury Department and the Board of General Appraisers will give you ample evidence of attempted undervaluations, and while the customs officers and Treasury officials have been actively at work to prevent undervaluation, it is admitted that specific rates will be a decided advantage in the collection of a just revenue.

As American manufacturers we have suffered severely from foreign competition, as shown by large importations of thread and yarns, and while we request only a moderate advance from existing rates this difference will enable us to increase our production and furnish to the American market a larger product of American manufacture, and consequently give employment to a greater number of people. The average wages paid by us are greatly in excess of those paid abroad, and

our labor item is a most serious factor in the cost of our products. For the protection of labor it is absolutely necessary that we have an adequate protective duty.

We are also selling agents for the Allentown Spinning Company of Allentown, Pa., manufacturers of jute yarns and twines, where wages are paid substantially on the lines already indicated, in comparison with foreign wages. In addition to present foreign competition we have to fear the manufacturers of Calcutta and of Japan, who intend competing for American trade.

If no changes are made in the duties on raw material, we recommend the following:

Paragraph 267. Yarn made of jute, single, in skeins, and in the grey, not finer than five lea or number, one and one-half cents per pound. Jute yarns finer than five lea or number, or if twisted, dyed, or bleached, or in any way advanced beyond single grey skeins, two and one-half cents per pound. Twines made of jute, forty per centum ad valorem.

Paragraph 274. Thread, twines, or cords made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, twelve cents per pound. If made from yarn finer than five lea or number, an additional duty of three-quarters of a cent per pound for every lea or part of a lea of fineness.

Yarn composed of flax, hemp, or ramie valued at twelve cents per pound or less, six cents per pound; valued at more than twelve cents per pound, fifty per centum ad valorem.

On bleached shirting linens, counting more than one hundred threads to the square inch, counting both warp and filling, and from thirty-five to thirty-seven inches in width, thirty-five per centum ad valorem.

Paragraph 277. All manufacturers of flax, hemp, jute, or other vegetable fibre, except cotton, or of which these substances, or either of them, is the component material of chief value, not specially provided for in this act, fifty per centum ad valorem.

THE BARBOUR BROTHERS COMPANY,  
A. R. TURNER, Jr., *Vice-President.*

## FLAX AND HEMP TWINES.

(Paragraph 268.)

### A SEPARATE PARAGRAPH ASKED FOR TWINES.

NEW BRIGHTON, PA., *January 6, 1897.*

COMMITTEE ON WAYS AND MEANS:

We are manufacturers of flax and hemp twines, and we do hereby most respectfully and earnestly make the following requests:

(1) We ask a restoration of the same duty on our twines as we had under the McKinley bill, viz, 45 per cent, as anything less will not afford us sufficient protection.

(2) In order to avoid any misunderstanding, we ask a separate paragraph, to read:

Twines made from flax, hemp, or jute, or any mixtures of these fibers, 45 per cent duty.

(3) In order to promote the growth of American hemp and flax, we ask for a duty of \$20 per ton on all importations of hemp, flax, and jute.

By granting these requests we are sure you will greatly promote the growth of flax and hemp in this country and enable the manufacturers of these fibers to make a reasonable profit.

BENTLEY & GERWIG, LIMITED,  
JOS. BENTLEY, *Treasurer.*

## COTTON BAGGING AND CORDAGE.

## STATEMENT OF C. E. PEARCE, OF ST. LOUIS.

SATURDAY, *January 2, 1897.*

Mr. PEARCE said: Mr. Chairman and gentlemen of the committee, I represent the manufacture of cotton bagging and also of cordage. I will not detain the committee with any remarks on this subject more than to say that I will file a brief statement of facts in connection with this matter, and will only say here now that we ask the restoration of the duty on cotton bagging as it was under the law of 1890, with a reduction from that law equaling about 25 per cent.

I want more particularly to advise the committee with reference to one or two other matters. First, in relation to vegetable fibers, hemp, etc.

I was one of a company engaged in the manufacture of hemp binding twine at Champaign, Ill., which enterprise we got well on its legs and thought it was going to be prosperous, when the action of the Fifty-first Congress in putting jute and other fibers on the free list destroyed the industry completely, and we sunk about \$175,000 in that work. We had leased about 4,000 acres of land in Illinois for the purpose of teaching the farmers of that State methods of raising hemp. We were paying for hemp straw delivered at our factory a price which produced to the farmer a better profit than he was realizing from any cereal grown on the Illinois soil.

Mr. DOLLIVER. What act did you refer to as placing hemp fiber upon the free list?

Mr. PEARCE. The act of 1890.

The CHAIRMAN. Jute, you mean?

Mr. PEARCE. Yes. It brought this Indian fiber into competition with all the native fibers of our own country so as to completely knock them out. Hemp can not compete with jute; and yet we demonstrated that a better binding twine could be made from native hemp than any twine that was in the market; the "red elephant" twine of the Champaign Company became famous all over the Northwest. If I had the framing of the tariff bill, and I have some little knowledge of the subject, I would put a duty on all the vegetable fibers that come in competition with fibers grown in this country, with proper differentials upon manufactured goods. The State of Missouri, as stated by my friend, Colonel Van Horn, was formerly a great hemp-growing district. We raised there prior to 1860 about 50,000 tons a year, and I believe not a pound is grown in the State to-day.

I also wish to corroborate in the main the statement made by my friend here, Mr. Rutherford, from California. Within the last two years I have had occasion to visit East India, China, Japan, and have been in contact with the subject. In respect to the rates of wages paid, the cost of fuel, and the cost of transportation, he is in almost every particular correct, according to my own observation. He is a little high in his estimation of freights. Calcutta freights are delivered to New York to-day as low as \$3.60. There is no doubt at all in my mind that the whole world has, in some form or other in the near future, got to protect itself against the cheap labor of India, Japan, and China, which is being brought closer and closer to us every day by the developments in telegraphy and in the lowering of the rates of transportation.

The Gresham treaty, which goes into effect in 1899, enables the

American manufacturer to take his plant and capital and locate it in Japan, and there enjoy nearly all the privileges of Japanese citizenship with reference to the transaction of business, the ownership of a plant, and also of corporate stock.

Mr. EVANS. Without becoming a citizen?

Mr. PEARCE. Yes, without becoming a citizen. That is one of the reciprocal provisions of that treaty. The development of manufacturing in that country within the last three or four years is startling, and with your permission I will just read you a list of what you call staple products in this country. Many of these I have seen manufactured in Japan, and all of them I saw in the Kioto Exposition of 1895. They are to-day manufactured in Japan, and many of the articles are made for export: Brushes of all kinds, watches (I am carrying a Japanese watch now and have done so for two years), calico, cotton goods, silk goods of all kinds, steel vessels, engines, mattings of infinite variety, wire nails, straw hats, shirts, collars, carpets, rugs, and druggets, cutlery, surgical instruments, toilet and other soap, chemicals, canned fish, pottery, bronze wares of all kinds, shoes, trunks, hand bags sewed and nailed, also shell work of all kinds, cabinet organs, bicycles, wheels, jinrikishas, leather, glass beads, and articles of bamboo composition.

All of those things are being made by labor in Japan that works to-day at a maximum of about 18 cents a day down to a minimum of 5 cents a day. I did not succeed in finding throughout a long investigation of the industries of Japan a single one in which there was a skilled mechanic paid equal to 25 cents a day of our money. That is the problem that confronts this country.

I have here a package of parlor matches, which I obtained from the Kobe Match Factory, situated in Kobe, Japan. This package came from the factory just as you see it here. It contains a dozen boxes of matches, each box containing 84 matches. They are sold to-day f. o. b. at Kobe, at a price which, reduced to our currency, is about  $1\frac{1}{16}$  cents per dozen boxes. The price I marked on the package,  $14\frac{1}{2}$  yen for 720 dozen. This reduced on an exchange value of 51 cents, makes a cent and a sixteenth of our money for a dozen boxes.

I have in my hand a watch made at Osaka, Japan, by machinery similar to the machinery used at the factory at Elgin, Ill. This watch I have carried for about a year and a half. I had it examined by two experts in our city, both as to its quality and value in the market. They both admitted that it was a perfect watch, and one said it was worth \$28, and the other said it was worth from \$26 to \$27.50 in the St. Louis market. I paid for this watch at retail, in the regular course of business, 21 yen, which, reduced to our money on the basis of exchange which existed at that time, was about \$10.90 retail. I can import these watches in lots of 500 and lay them down at Chicago or St. Louis, after paying the duty of 25 per cent, for about \$9 apiece.

Mr. EVANS. Is it a good timekeeper?

Mr. PEARCE. Yes; I have laid my other watch aside and am using this Japanese watch exclusively. My own opinion upon this subject probably differs from that of some of the gentlemen who have appeared before you. I believe that the protective tariff system is good for everything that can be produced in this country, no matter whether it is a natural product or a manufactured product. That is the doctrine which I like to stand up for and see the committee stand up for also.

Mr. DOLLIVER. Why have we not succeeded in the manufacture of this jute cloth?

Mr. PEARCE. I think we do succeed, and we have been conducting the manufacture of cotton bagging for many years, but this burlap question is one that I am not entirely familiar with. But looking back over the legislation of the country during a good many years, I do not think there has ever existed conditions of legislation which afford the encouragements necessary for people to enter upon this business in a very large way. In the first place the plant for the manufacture of different kinds of burlaps is a very expensive one. Burlap has been manufactured in large quantities, and continued to be manufactured up to 1893 for various purposes. Whether the manufacture of burlap was largely carried on for the purpose of supplying the fabric used in making grain sacks I do not know. There was made a large quantity of burlap seamless sacks, which are made upon a machine that weaves the fabric and makes the bag at the same time. This I apprehend is about the same thing as making the fabric and afterwards the bag.

The CHAIRMAN. Is the cotton bagging used in this country nearly all made here?

Mr. PEARCE. Nearly all. Some has been imported in the last two years.

The CHAIRMAN. Even with the free raw material?

Mr. PEARCE. The importation has been rising during the last two years. The starting of a large factory necessary to make that fabric is not a matter of months. It takes a long time to get it into working shape.

The CHAIRMAN. Are you a manufacturer of cotton bagging?

Mr. PEARCE. Yes, sir.

The CHAIRMAN. Then you can speak from experience as to the effect of putting it on the free list?

Mr. PEARCE. The effect is to kill it eventually.

The CHAIRMAN. Do you think in the long run the industry would have to succumb?

Mr. PEARCE. There is no doubt about it.

Mr. DOLLIVER. Could a duty upon the jute cloth be imposed that would in time secure the manufacture of that material here?

Mr. PEARCE. Yes; I have no doubt of it.

Mr. DOLLIVER. I understand one gentleman to say at the present time only 5 per cent of the jute cloth required for the manufacture of this cotton bagging was woven here.

Mr. PEARCE. I do not know what the fact is. That may be.

Mr. DOLLIVER. He spoke of it being more important for us to maintain the manufacture of bags than to maintain the manufacture of cloth.

Mr. PEARCE. Quite important, I apprehend, to maintain the manufacture of both.

Mr. DOLLIVER. It would strike me so.

Mr. PEARCE. The fact of the matter is, that under the legislation of the country during the last few years the importation of foreign vegetable fibers and products made from them has displaced nearly 2,000,000 bales of American cotton. There is imported into this country to-day, in all sorts of forms, manufactured products and fibers which are equal to nearly 2,000,000 bales of cotton.

Mr. EVANS. Do they take the place of cotton?

Mr. PEARCE. Yes, sir.

Mr. GROSVENOR. It is not true, then, that cotton has no competitor?

Mr. PEARCE. If I were a Southern planter, the first thing I would do would be to ask Congress to put a duty upon competing fibers.

There is no reason why three-fourths of all the products made from jute, sisal, hemp, etc., should not be made from cotton.

Mr. EVANS. If you were so wedded to the theory of free trade that you could not give it up even for your own interests——

Mr. PEARCE. Then I suppose I would suffer the consequences and starve if that was the end of it.

Mr. EVANS. Where is most of this jute plant grown?

Mr. PEARCE. In India—wholly there.

Mr. EVANS. Where is sisal grown?

Mr. PEARCE. In Yucatan, Central America.

Mr. EVANS. I understand that to be a sort of bastard banana plant?

Mr. PEARCE. No; it is not a bastard. It belongs to the great cactus family.

Mr. EVANS. Where does sunn grass come from?

Mr. PEARCE. I have never seen any sunn. I think it is a Central American product.

Mr. EVANS. Where does sisal grass come from?

Mr. PEARCE. Central America. I believe the British Government introduced the plant also into the Bahamas.

Mr. EVANS. Where does manila come from?

Mr. PEARCE. The Philippine Islands.

Mr. DOLLIVER. You spoke of manufacturing binding twine of hemp in Illinois, and that your product was equal to the best.

Mr. PEARCE. It had a reputation of that kind.

Mr. DOLLIVER. How about the prices of binding twine there. What was paid for binding twine there previous to the establishment of your factory?

Mr. PEARCE. The effect of establishing the Champaign factory was to reduce the cost of binding twine, I think, about  $1\frac{3}{4}$  cents a pound. In the summer of 1891, as president of the Sioux Indian commission, I had occasion to go to South Dakota, to the Pine Ridge Reservation, and I found at Rushville and a number of towns along the line of that railroad——

Mr. JOHNSON. That is in Nebraska.

Mr. PEARCE. Yes; in Nebraska. I found binding twine selling for 12 cents a pound which we sold at wholesale for 6 cents a pound. The twine they were selling for 12 cents was manufactured by our Champaign factory. Somebody was making a pretty fair profit out of it.

Mr. DOLLIVER. Can binding twine be manufactured out of the native flax product of the Northwest?

Mr. PEARCE. I would not like to venture information about that. Flax is an obstinate fiber naturally.

Mr. PAYNE. At the present time binding twine is mainly made of manila and sisal?

Mr. PEARCE. The bulk is made of sisal. Manila does the work pretty well.

Mr. PAYNE. And none of it is made out of jute?

Mr. PEARCE. Yes; there is some binding twine made of jute. Not a large quantity now, I think.

Mr. PAYNE. The price is too high, is it not?

Mr. PEARCE. No; it does not give satisfaction. The jute binding twine, I believe, has never been a complete success.

Mr. STEELE. What rate of duty would give protection to our manufacturers of bagging?

Mr. PEARCE. One and two-tenths cents per square yard, I think, would do it under existing conditions.

Mr. STEELE. What was it under the act of 1890?

Mr. PEARCE. 1.6 for cloth under 6 cents in value, and 1.8 over that. The latter part of the provision, however, has become obsolete and is no longer needful.

Mr. WHEELER. You say the reduction of duty on cotton bagging that is put around our cotton has cost this country the displacement of 2,000,000 bales of cotton.

Mr. PEARCE. Oh, no; you did not hear the remark I made.

Mr. WHEELER. I was told that was the remark.

Mr. PEARCE. I said that the importation of jute, etc., products and jute and other foreign fibers to this country equaled nearly 2,000,000 bales of cotton, and that the importation of products of vegetable fibers and of the fibers in unmanufactured form, taken in the aggregate, has displaced 2,000,000 bales of American cotton.

Mr. WHEELER. To what use is it put?

Mr. PEARCE. About one hundred different things.

Mr. WHEELER. Please mention some of the most prominent.

Mr. PEARCE. All sorts of burlaps, oilcloths, bagging, furniture packing, curtains, clothes that you wear, cordage, and carpetings of all kinds. There are very few carpetings made now which are not adulterated with jute fiber. In fact, jute is the most remarkable fiber of the world in its adaptability to all sorts of textiles as a mixture. I succeeded once in listing up sixty-five different products used by our people which are made wholly or in part from jute fiber.

Mr. TAWNEY. That could be made from cotton?

Mr. PEARCE. Most of them.

Mr. WHEELER. How much has the importation increased in the last two years?

Mr. PEARCE. Very largely. The jute crop of India has increased in six years from 4,000,000 to about 6,000,000 bales. This country takes in all forms nearly 2,000,000 bales; about 3,000,000 bales go to the rest of the world, and half a million bales are used in India for what may be called domestic use.

Mr. WHEELER. How much since 1894?

Mr. PEARCE. It has increased.

Mr. STEELE. You are speaking about 1890?

Mr. PEARCE. It has increased pretty largely—I think some 40,000 or 50,000 bales—since 1894. I will not be certain about that. The figures are obtainable, however. That is my recollection now.

I would like to say to the committee, Mr. Chairman, in relation to cordage, I think the manufacture of cordage can stand a reduction from the McKinley rate from  $1\frac{1}{2}$  cents to 1 cent, on binding twine from seven-eighths of a cent to half a cent, and on tarred cordage the same as on untarred cordage. While there was a special rating put by the law of 1890 on tarred cordage, I think it is unnecessary, as that can go in the same as untarred, so far as the industry is concerned.

Mr. DALZELL. The duty on binding twine was seven-tenths of a cent, was it not?

Mr. PEARCE. It was seven-tenths; the provisions for tarred cables and cordage was 3 cents a pound. That was a differential in favor of the tar which I think is unnecessary now.

Mr. WHEELER. How low would cotton have to fall in price to prevent this displacement—that is, to take the place of the imported jute?

Mr. PEARCE. That is pretty difficult to say. The jute is sold for 3,  $3\frac{1}{2}$ , and  $3\frac{3}{4}$  cents, depending upon the grade.

Mr. WHEELER. In India or here?

Mr. PEARCE. Delivered. The freight on it is very low. You can make contracts now, I think, as low as \$3.60 for a long ton of 52 cubic feet; that is, from Calcutta to New York.

The CHAIRMAN. Jute, I believe, is one of the cheapest fibers grown. It is grown with very little labor, and is an exceedingly cheap fiber through its natural conditions, aside from the question of labor.

Mr. PEARCE. It is perhaps the cheapest fiber known.

The CHAIRMAN. Is it possible to protect against competition from a product of that kind which, in its natural condition, is so much cheaper than other fibers?

Mr. PEARCE. That is rather a difficult question to answer. Different people would have different views about it. My own view about it is this—that I would develop our own fibers by a duty on jute and any other fiber coming in competition with our own. In other words, I would take care of my own country before I would care for any other country. I look at the tariff question as a great system of bookkeeping, and that the point to be decided is whether we are better off at the end of the year than we were at the beginning.

The CHAIRMAN. But how if you are fighting against nature in regard to these fibers? In other words, would you undertake to raise coffee and tea in this country, with natural conditions against you, in competition with those countries where natural conditions are in favor of the raising of tea and coffee?

Mr. PEARCE. I do not think that that question is entirely applicable. I have seen jute 16 feet high growing in this country. Jute and ramie can be grown anywhere in this country south of Lexington, Mo.

The CHAIRMAN. Is it true that jute can be grown here as successfully, in view of the climatic and soil conditions, as it can in India?

Mr. PEARCE. I have no doubt of it.

## HEMP BINDER TWINE.

(Paragraph 268.)

### STATEMENT OF MR. R. W. McCRERY, OF FRANKFORT, KY.

SATURDAY, *January 2, 1897.*

Mr. McCRERY said: Mr. Chairman and gentlemen of the committee. I desire to say a few words in corroboration of the statement of Mr. Pearce, and pertinent to the inquiry made by the Member from North Dakota in regard to the possibility of making satisfactory hemp binder twine in this country—of course in reference to the cost of the article. I would say that I am the secretary and general manager of a company which has made hemp binder twine since 1880, and that we even made a small amount last year in spite of the very great disadvantage in regard to prices. We made between 300,000 and 400,000 pounds of it, and as that twine was sold at about 4 cents a pound less than other twine and obviously to people who had been using that class of goods for ten years, that fact is evidence of its being satisfactory.

Mr. DOLLIVER. I would like to know if there is anybody here to inform the committee whether our native flax fiber can be made use of. I understand there is a gentleman here who has been making some experiments on that point, and I would like to hear him.

## FLAX THREAD, YARN AND TWINE.

## STATEMENT OF MR. JOHN W. BELL, OF ANDOVER, MASS.

SATURDAY, *January 2, 1897.*

Mr. JOHN W. BELL, of Andover, Mass., came before the committee.

Mr. DOLLIVER. I want to know whether you have made any experiments in regard to the use of native flax fiber in the manufacture of any of these cloths that are made out of jute?

Mr. BELL. I know absolutely nothing of the manufacture of cloth. The concern that I represent is wholly a flax thread, yarn, and twine manufactory that was started in 1835, being the first mill of the kind started in this country. We are not to-day using, and have never, to my knowledge, used a pound of American-grown flax. We have used flax grown in Canada, which is in the nature of a Russian flax, or is used for the same purpose. The bulk of the flax that we manufacture is Belgian.

Mr. DOLLIVER. Have you made any experiments, aside from your usiness, as to the use of American-grown flax?

Mr. BELL. I have had in my hands a sample of flax sent to us from Minneapolis. I believe it was cultivated in Minnesota and rotted there. It was sent to us by a man named Warden. It weighs perhaps less than half a pound, and it shows a very nice and very fine fiber. Whether the sample is what is called a laboratory sample or not I can not say.

Mr. DOLLIVER. Was Mr. Warden connected with the woolen mill that was started at Minneapolis after the passage of the tarriff act of 1890?

Mr. BELL. I do not know exactly. I got the impression that he had got up some machinery for pulling flax from the ground. If such machinery could be developed it would do much for flax culture in this country. In connection with that I understand that they are trying experiments for rotting flax, but so far as my experience goes we have been unable to manufacture any goods from American grown flax, for the reason that American flax is grown for the seed rather than for the fiber, and therefore the fiber is neither long enough nor strong enough for manufacture.

## COTTON BAGGING AND CORDAGE.

ADDITIONAL STATEMENT SUBMITTED BY MR. CHARLES E. PEARCE,  
REPRESENTING THE AMERICAN MANUFACTURING COMPANY.

The following statement of facts is respectfully submitted concerning jute bagging for baling cotton.

ST. LOUIS, MO., *December 24, 1896.*

*Past duties.*—Act of 1846 the rate was 25 per cent ad valorem; act of 1861,  $1\frac{1}{2}$  cents per pound (equal to 3 cents per yard for 2-pound bagging); act of 1863,  $2\frac{1}{4}$  cents per pound (equal to  $4\frac{1}{2}$  cents per yard for 2-pound bagging); act of 1864, 3 cents per pound (equal to 6 cents per yard for 2-pound bagging); act of 1870, 2 cents per pound (equal to 4 cents per yard for 2-pound bagging); act of 1872,  $1\frac{8}{10}$  cents per pound (equal to  $3\frac{6}{10}$  cents per yard for 2-pound bagging); act of 1875, 2 cents per pound (equal to 4 cents per yard for 2-pound bagging); act of 1883,  $1\frac{1}{2}$  cents per pound (equal to 3 cents per yard for 2-pound bagging); act of 1890,  $1\frac{6}{10}$  cents per square yard; act of 1893 was put upon the free list.

The Wilson bill as passed the House provided 15 per cent ad valorem. The rating was agreed to in the conference committee of the Senate and House. The product was carried to the free list on motion of Senator Vest. The conference report was not presented for consideration.

There are 11 bagging mills in the United States, of which 5 are in the Northern and 6 in the Southern States.

Capacity of American mills, about 76,000,000 yards per year.

Required for cotton crop of 8,500,000 bales, 58,000,000 yards.

Surplus productive capacity of American mills, 18,000,000 yards.

Average weekly wage paid for all hands in American mills, about \$5.75.

Average weekly wage paid for all hands in Dundee, Scotland, about \$2.35.

Average weekly wage paid for all hands in Calcutta mills (silver), 80 cents.

For Calcutta wage rates, see Consular Report No. 102, page 379.

The 26 Calcutta mills employ over 60,000 hands (largely coolie), and have substantially destroyed most of the Dundee establishments. (See Dundee Advertiser, June 1-4, 1894.)

Since 1892 the Calcutta mills have also substantially destroyed the manufacture of burlap in the United States.

Under the law of 1883 the duty on jute butts was \$5 per ton, equal to one-fourth cent per pound. By law of 1890 jute butts were made free. A reduction of the duty on bagging corresponding to the remission of the duty on jute butts, by the law of 1890 making butts free, would have left the duty on standard 2-pound bagging equal to 2½ cents per yard. But, in fact, the law of 1890 reduced the duty on bagging far below that rate. By the law of 1890 the duty was made specific, and the rate was 1.6 cents per square yard.

To prevent frauds on the Treasury and protect American manufacturers, the duty in the proposed law should be specific, and it is believed that a rate of 1.2 cents per square yard will, under existing conditions, be reasonably protective. This makes a reduction of about 25 per cent from the law of 1890.

The following tabulation shows the manufacturer's prices for 2-pound bagging (i. e., 2 pounds to yard) at New York as a basis for different periods during the last thirty years:

| Cents per yard. |     | Cents per yard.                 |      |
|-----------------|-----|---------------------------------|------|
| September—      |     | September (average for season)— |      |
| 1866.....       | 35  | 1891.....                       | 6    |
| 1870.....       | 30  | 1892.....                       | 6.20 |
| 1875.....       | 12¾ | 1893.....                       | 5.04 |
| 1880.....       | 12  | 1894.....                       | 5.65 |
| 1885.....       | 10¾ | 1895.....                       | 4.80 |
| 1890.....       | 7½  | 1896.....                       | 4.98 |

The lowest price ever reached prior to 1890 was 7½ cents per yard; that was in 1887, and was owing to an enormous jute crop and consequent low prices.

The favorite brands of jute butts used by manufacturers cost, laid down in New York, during the last three years from 1½ to 2 cents per pound, making the cost of those grades of material from 3 to 3½ cents per yard. The India jute crop has increased from 4,000,000 to 6,000,000 bales since 1891; of this aggregate about 2,000,000 bales comes to the United States in the form of raw material and manufactured products; about 3,500,000 bales goes to the rest of the world, and about 500,000 bales is for what is called "domestic use."

The closely approximating cost of making, in the United States, 1 yard of bagging is latterly 2.03 cents, exclusive of raw material. The extreme low price of the product has been due to the fact of sharp competition among American manufacturers.

It is absolutely impossible for American or English mills to survive the competition of Calcutta, with her cheap coolie labor, without a duty sufficient to equalize conditions.

The destruction of the American bagging mills and the enforced idleness of 5,000 more industrial workers will serve no purpose other than to carry to East India this branch of manufacture, and subject cotton bagging in our own markets to the arbitrary prices fixed by the East India Jute Association.

The committee is therefore respectfully asked to provide the following paragraph:

"Bagging for cotton, gunny cloth, and all similar material, for covering cotton, composed in whole or in part of hemp, flax, jute, or jute butts, one and two-tenths cents per square yard."

Respectfully submitted.

JAS. S. MURDOCH,

*Secretary and Treasurer Charleston Bagging Manufacturing Company.*

I have examined the foregoing statement submitted by Mr. Murdoch, of the Charleston Bagging Company, and concur in the same. Having

personally inspected the leading jute mills of Dundee, and also those of the Calcutta district of East India, it is apparent to me that the well-known decline of Dundee is wholly attributable to the extremely cheap labor of India. I believe that a duty of 1.2 cents per square yard on "bagging for cotton, gunny cloth, and all similar material for covering cotton, composed in whole or in part of hemp, flax, jute, or jute butts," is necessary to afford reasonable protection to the American mills engaged in this industry. It is believed that this reduction of 25 per cent from the law of 1890 is practicable by reason of a reduction in the cost of raw material, reduction of cost in freight, and improvements in processes of manufacture. There is no "trust" in this business. The operation of the law of 1890 did not increase the cost of this product to consumers. Contrarywise the market price has with very slight variation constantly fallen year by year from 1890 to 1896, inclusive. This decline has in the main been owing to falls in the cost of material, to the large surplus stocks annually produced by the manufacturers, and the sharp competition among them to market their respective outputs. Jute is commercially produced in India only. It is brought down the rivers in the shape of long or "gross" jute, mostly to Calcutta. There it is assorted, cut, graded and compressed for export. Jute butts are the roots or "butt" ends of the stalks, cut off because of their unfitness for fine work. It was formerly waste, but became a commercial product some thirty years ago.

Cotton bagging used for baling cotton is made from jute butts. Loose jute is graded and marked in Calcutta, and in that form is worth one-fourth of a cent per pound less than when baled and made ready for shipment. This saving of cost was one of the causes that led to the rapid development of the Calcutta mills, which, by reason of this advantage, together with cheap coolie labor, have absorbed year after year increasing proportions of the jute business of the world. These mills, located upon low-cost lands, are equipped with the best English machinery, delivered free of duty, and are operated under English superintendence. They are furthermore all associated together in the East Indian Jute Association, one of the largest industrial combinations in the world, having for its object the regulation of supply, the fixing of prices in noncompetitive markets, and the recoupment there of their losses incurred by the cutting of prices in markets where the competition of foreign manufacturers exists.

The competition on cotton and woolen goods, comes exclusively from civilized countries which employ white labor. The rapidly rising competition on goods manufactured from jute comes from a district of the world where the lowest grade of labor in the world is utilized—labor which exists on wages at which the most economical American would starve.

It would seem, therefore, that American manufacturers of jute goods are entitled to at least as much consideration as those engaged in the production of cottons or woolens, especially in view of the fact that the former have paid to our Government a duty of 45 per cent on all or nearly all the machinery which they use. The plant cost of the American Manufacturing Company operating 230 looms is nearly \$2,000,000, or about \$8,000 per loom, inclusive of land, buildings, machinery, and appliances. The working capital required is about \$1,300,000.

In India there are 26 jute mills, having about 9,000 looms and using over 1,500,000 bales of jute and cuttings annually. From the official reports made of these mills, it appears that the plant cost is about \$1,600 per loom. This wide difference of cost arises in part from the

duties collected by our Government on machinery, and from the high wages paid to our mechanics employed in building and in the erection of machinery, both being twenty times more per hour of labor than is paid in India for similar mechanical work. Furthermore, the greater cost per loom of an American mill causes added expenses of larger proportionate magnitude in many particulars, such as insurance, wear and tear, interest on investment, depreciation, repairs, and local taxes. This last item paid in the United States is equal to 5 per cent on the entire cost of a mill of equal size in India. The general policy prevailing in Great Britain, India, and Japan, is to encourage manufacturing by minimums of local taxation, and in this respect much advantage is experienced over the United States.

Applying time and output tests at different parts of the East Indian plant, I am unable, in a comparison, to find a superior productive capacity in either a Scotch or American mill, exceeding 15 per cent.

Owing to the fluctuations in silver, and the changes effected by electrical appliances, it is difficult for purposes of comparison to get a basis for estimating the cost of making a square yard of 2-pound bagging in East India, and the same in the United States, but it will not vary much from four and one-half tenths of a cent in the former, and 1½ cents in the latter. A duty of 1.2 cents per square yard is therefore needful to equalize the difference in labor cost.

Another point is important in this connection. American manufacturers of bagging being on the ground and buying their material eighteen months in advance, are always able to supply a normal demand throughout the cotton season. A failure thus to do would involve enormous loss to the cotton-growing industry. Following climatic conditions a cotton crop is frequently known to rise or fall to the extent of a million bales after the middle of September. The destruction of the American mills would inevitably subject the cotton-growing interest to all the accidents and caprices incident to a foreign supply proceeding from the most distant quarters of the globe. Whether this is important to be considered may be judged from the fact that in the midsummer of 1896, nearly 8 per cent of the supply required for the year (material and product) was destroyed by two fires in twenty hours, besides other losses of material by shipwreck. The large surplus stocks on hand prevented any advance in market prices. (See table of market quotations.)

Incidental to the foregoing statement we respectfully ask that paragraph 601 of the law of 1890 and paragraph 501 of the existing law be left out of the law now proposed. This provision can perform no office other than defrauding the revenue of the Government, except the stuff be used for paper stock, for which provision is made elsewhere.

Incidental, also, we would ask that if paragraph 670 of the law of 1890 is incorporated in the proposed new law, it shall be made to read as follows:

Paper stock, crude, of every description, including all grasses, fibers, rags (other than wool), waste, shavings, clippings, old paper, rope ends, waste rope, waste bagging, old or refuse gunny bags, or gunny cloth, and poplar or other woods, fit only to be converted into paper: *Provided*, That any piece of waste bagging, gunny bags or gunny cloth which measures more than fifteen inches in any direction shall be classified as manufactures of jute, or other vegetable fiber, and shall pay duty accordingly.

It is a fact in practice that large quantities of so-called waste bagging, gunny bags, and gunny cloth are imported free as paper stock, transferred to second hands, opened up, and all pieces of considerable

size are selected out, and after being sewn together pass into commercial use for baling and package purposes. It is found in practice that the revenue officers will not make a discrimination, "fit only to be converted into paper," and, therefore, the additional provision is necessary to protect both the Government and the American manufacturers.

As manufacturers of cordage we also ask that the paragraph relating to the same be formulated as follows:

Cables, cordage, and twine (except binding twine) composed in whole or in part of istle or Tampico fibre, manila, sisal grass, or sunn, one cent per pound; all binding twine, manufactured in whole or in part from istle or Tampico fibre, manila, sisal grass, or sunn, one-half of one cent per pound; cables and cordage, made of hemp, two and one-quarter cents per pound; tarred cables and cordage, same rate per pound as untarred of same materials.

Although the rates above suggested are about 25 per cent below the respective rates of the law of 1890, I believe they are reasonably protective at the present time.

CHAS. E. PEARCE,  
*On Behalf of the American Manufacturing Company.*

## RUSSIA BOLT ROPE.

(Paragraph 277.)

### STATEMENT SUBMITTED BY DE GRAUW, AYMAR & CO., OF NEW YORK, AND BOYNTON & CO., OF BOSTON.

NEW YORK, N. Y., *January 9, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

We would respectfully call your attention to the subject of Russia bolt rope, tarred, made of Russian hemp. Under the McKinley Act, cordage not made of hemp was made dutiable at  $1\frac{1}{2}$  cents a pound, cordage made of hemp at  $2\frac{1}{2}$  cents a pound, and cordage, tarred, at 3 cents a pound. Under the act of 1894 only cordage composed of New Zealand hemp, istle or Tampico fiber, manila, sisal grass or sunn was provided for eo nomine and at the rate of 10 per cent ad valorem. All other cordage of hemp was dutiable therefore under the general clause of manufactures of hemp at 35 per cent ad valorem.

This limitation to cordage made of certain materials, if made with the purpose of allowing the importation of cordage which would not interfere with American manufactures, should have properly included Russia bolt rope, but for some unknown reason or through inadvertence it was left out.

Russia bolt rope is not made in this country and the attempt to make the same has never been successful here. All attempts hitherto have been failures, owing to the fact of our not knowing how to treat the hemp and mix the tar properly, and further, the tar used is much superior in every way to the tar produced here.

There was no sense in not making the rate of duty the same on rope made from Russian hemp as that made from manilla, sisal, and sunn for in the large part both are used for the same purpose, i. e., putting on sails.

Those who framed the McKinley Act did not think it advisable to legislate against Russia bolt rope. Russia bolt rope is manufactured

only by one firm in the world, J. Hoth, of St. Petersburg, and they hold the secret of manufacturing it, especially that portion of the secret which relates to tarring it. In 1894 there was of all kinds of tarred cordage, \$23,768.98 worth, imported, from which it can be seen that there was not a large revenue involved in this question. There are about 3,000 coils, averaging from 125 to 150 pounds, imported into this country a year. This bolt rope is used for two purposes, for binding the edges of sails for sailing vessels, and for use as pursing lines on seines used in fishing, and nothing has yet been found that will work as satisfactorily for seine purposes as Russia bolt rope. There is about one-half of the amount used in each of these two directions. It sells in the United States for about 15 cents a pound, average price, duties paid. Ordinary cordage of manilla sells in this country from 6 to 7 cents a pound.

Binder twine is free of duty. If the wheat and grain growers have free binder twine, why should not the fishermen also be favored by having free bolt rope for use on their seines and vessels?

Again, the materials for construction of vessels can be imported and withdrawn from bond free of duty if the same is used in the construction or repair of American vessels. Why should not bolt rope, which goes into the sails of vessels, part of the apparel, be discriminated against and duty assessed upon it?

In the matter of revenue the argument could not be advanced that a reduction in duty would reduce the revenue because the importations are so small and a reduction would not increase materially the importation, as the demand is limited and the uses comparatively few to which it can be put. A reduction in the rate of duty or putting it on the free list would most certainly reduce the cost to the consumer.

We ask that in the new tariff act no discrimination be made against Russia bolt rope, and that it be provided for at the same rate as other cordage, at 10 per cent ad valorem. If the 10 per cent ad valorem rate was applicable to Russia bolt rope there would be no injury to any domestic manufacture, and it would benefit the American fishermen to whom the article goes as part of his equipment.

If any other rate be fixed we request that no discrimination be made against Russia bolt rope.

DE GRAUW, AYMAR & Co., of New York.  
BOYNTON & Co., of Boston.

## CORDAGE AND BINDING TWINE.

(Paragraph 268, and free list, paragraph 399.)

### FOREIGN MILLS ARE DOING A LARGE BUSINESS.

SAN FRANCISCO, *December 30, 1896.*

DEAR SIR: The present law only protects rope by a duty of 10 per cent ad valorem, binder twine being admitted free of duty. A specific duty of at least 1½ cents per pound should be put on both rope and binder twine. There is one rope factory in Hongkong about to double its capacity, and two in Japan which are subsidized by the Japanese Government. These mills, with their cheap coolie labor, can land their

goods here and undersell us—in fact, force us to close our mills. Our business is threatened at its very doors by these cheap foreign importations, and the mills on the Atlantic Coast have a hard struggle to compete with the cheap labor of Europe.

TUBBS CORDAGE COMPANY.

## MANILA AND SISAL CORDAGE.

(Paragraph 268.)

### AMERICAN MANUFACTURERS HANDICAPPED BY THE COST OF LABOR.

NEW YORK, *December 30, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We respectfully ask your consideration of our views, herein expressed, in regard to the tariff duty on manila and sisal cordage. Speaking from the Pacific Coast point of view, so far as we can learn, in our line labor is 50 per cent higher with us than in Europe unless we should employ Chinese labor, which we do not do.

Skilled labor with us, such as feeders to breakers, rope layers, etc., are paid from \$1.75 to \$2.50 per day; machinists, \$3 to \$3.50, and engineer, \$100 per month. Our interest, insurance, and taxes are all much higher than in Europe, and our condition is one of minimum output at the maximum cost. The European manufacturers can sell their surplus to our trade at a figure that is a loss to us, shipping the same in by sailers, which load for the return voyage with wheat.

The additional cost to us under these conditions over what it costs our foreign competitors more than offsets the present duty of 10 per cent ad valorem on rope and nothing on binding or harvest twine.

In addition to that competition, we can see plainly in the near future the competition that is to come from China, where there is now a factory in operation, with their skilled labor at 25 cents per day in silver or about 13 cents gold. This the writer knows to be a fact, for he was through the factory last October and, with the exception of a foreman and superintendent, saw only Chinamen employed, and upon the statement of the superintendent, at the wages given above. This statement was verified from outside sources as to the current price of skilled labor.

The world's source of supply of manila hemp is the Philippine Islands, about two and one-half days' journey from Hongkong, so that the manufacturers there are not obliged to carry large stocks of raw fiber as the manufacturers in other countries are, and the freight on manufactured goods should be less than on the bulky raw fiber.

Now, as the labor in manufacturing cordage is two-thirds the expense, we think it would be both a wise and equitable policy to protect the cordage manufacturers in this country by a specific duty of say 1 cent per pound on rope and five-eighths cent per pound on binding twine.

THE PORTLAND CORDAGE COMPANY,  
By SAML. M. MEARS, *President.*

**BINDING TWINE.**

(Free list, paragraph 399.)

**NO REASON FOR SINGLING OUT THIS INDUSTRY FOR A FREE  
TRADE SACRIFICE.***XENIA, OHIO, December 17, 1896.***COMMITTEE ON WAYS AND MEANS:**

We trust that the forthcoming revision of the tariff will be accomplished without overlooking the claims of the binder-twine industry. This line of manufacture has been wholly unprotected since the enactment of the Wilson law, and American mills have been constantly subjected to foreign competition. This has been especially true during the past year, large quantities of twine having been imported from Canada and elsewhere, involving shorter running time for mills in this country, and consequent loss of wages to operatives and profits to mill owners.

There was no good reason why the binder-twine industry should have been singled out of all others for free trade. The reason which operated to influence Members of Congress was that there was at the time a binder-twine trust which was seeking to control the American market for binder twine. The operations of this trust aroused considerable opposition among the farmers, and this opposition was reflected in the action of Congress. The injustice of this action is apparent when it is considered that the trust at that time controlled only about one-half of the mills of the country, and those outside were as much opposed to the operations of the trust as the farmers themselves, and were engaged in a hard fight for existence. Even before the enactment of the Wilson law the binder-twine trust had failed, and it was then in the hands of a receiver, and has since ceased to be the all-important factor in twine manufacture that it was formerly, even in the hands of its present manipulators. Some of its mills have been sold, others have been dismantled, and some are standing idle, leaving only about five mills in active operation, against a much larger number of mills outside the combination. The personnel of the management has also changed, and the managers are now conservative business men, who are not seeking to control the market, but are endeavoring to so manage the few mills yet remaining in their hands as to make a reasonable profit. That they are not seeking to corner the supply of binder twine is evinced by the fact that they are selling mills instead of buying them.

But we are not apologists for the National Cordage Company, or its successors. We are not and never have been connected with the twine trust, and we claim that our business is as fairly entitled to protection as that of any other line of manufacture. Under the McKinley law a duty of seven-tenths of 1 cent per pound was placed on binder twine. This is not an extravagant item of protection, surely, and cuts but a very small figure in the cost of twine to the consumer, even if the tariff were added to the cost of production, which experience has abundantly proven is not the case. The simple effect of a tariff at that figure would be to reserve the American market for American manufacturers, instead of throwing it open to Canadians and others, who make practically the same prices as Americans, and only succeed in closing the American mills a little earlier in the season than would otherwise be the case. Canada, on the other hand, has a tariff on binder twine,

amounting, we believe, to seven-tenths of 1 cent per pound (the same as the McKinley tariff), and we are wholly unable to compete in their market.

THE HOOVEN & ALLISON Co.

## SISAL AND MANILA BINDING TWINE.

### STATEMENT SUBMITTED BY MR. HENRY WOLFER, WARDEN MINNESOTA STATE PRISON.

STILLWATER, MINN., *January 5, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

We have experimented with domestic fibers, American hemp and flax; in fact, was obliged to manufacture domestic fibers into binding twine at least three years longer than we should have done, or would have done, were it not for the fact that our system of machinery could not be used in the manufacture of manila and sisal fibers. The manufacture of binding twine was commenced in this institution in 1890. About 300,000 pounds was manufactured the first year; the next year 800,000 pounds. This gradually increased until it reached 1,800,000 pounds in 1894. The first year it was sold for 10 cents a pound, the next at 9 cents, and gradually reduced until the season of 1894, when we were obliged to sell it at 5½ cents in order to compete with sisal and manila twines. During the last two years of the operation of the twine plant on domestic fibers we were obliged to sell below cost of production in order to meet competition and dispose of the product. I made a full and complete report of the operation of the twine plant to the legislature in the winter of 1894-95, a copy of which is herewith submitted. After a careful investigation of the matter a bill was introduced in the lower house providing for the purchase of a system of long-line machinery for the manufacture of sisal and manila fibers. A copy of this bill is herewith submitted. (Exhibit A.) A system of machinery with a daily capacity of 9,000 pounds was purchased. The capacity of the plant has been increased by the purchase of additional machinery since. It was increased to an average capacity of 10,000 pounds per day about one year ago. We have just purchased some more machinery, which will now increase our daily capacity to about 12,000 pounds.

We sold our output of sisal and manila twines in 1895 at the following prices: White sisal twine, 500 feet to the pound, 5 cents; standard, 500 feet to the pound, 5 cents; sisal and manila mixed, 600 feet to the pound, 6 cents; pure manila, 675 feet to the pound, 7 cents. We sold last season (1896) at the same prices. At these figures, with prevailing prices of foreign fibers, we were enabled to furnish the twine dealers and farmers of our State their twine at very satisfactory prices and below the prices asked by outside manufacturers, and at the same time render some profit to the State.

Now, to return to domestic fibers, I can say that my experience has been that it is impossible to utilize domestic fibers in the manufacture of binding twine unless the product can be sold at least 3½ cents per pound above the present ruling prices. There is no question but what good binding twine can be made from American hemp, but it will be at a greatly advanced cost. This would, of necessity, be a great hardship upon the agricultural interests of our State. Good binding twine could also be made from American flax, but the cost of its production would be still dearer than that of American hemp. In other words, both American hemp and flax fiber, when made sufficiently clean to be

used for the manufacture of a good article of binder twine, would be worth much more than the binder twine could be sold for, of which it is composed, in the manufacture of commercial twines, crashes, etc.

There is no question but what the twine plant at Stillwater has saved the farmers of the State of Minnesota hundreds of thousands of dollars, and that it has compelled jobbers and dealers to sell to the farmers on a closer margin than they otherwise would have done. The growers of American hemp in Nebraska and Kentucky, of whom we used to purchase our fibres, can not grow hemp to be used in the manufacture of binding twine and make a good living profit unless the product can be sold from 3 to 4 cents a pound above the prevailing prices to-day.

I do not think the twine and cordage business at the present time is controlled by a trust, although in times past it has been one of the largest monopolies in America. With the downfall of the National Cordage Company, which afterwards reorganized under the name of the United States Cordage Company, and still later the Standard Rope and Twine Company, the old twine trust has lost its grip. I have no doubt that efforts have since been made to reorganize, and that an attempt is being made now to control the output so as to regulate prices above the present standard, although it has been my experience that with prices prevailing the past two years, which are lower than they have ever been before, there is a fair profit in the business. We sold our twine the past two years on an average of about three-fourths cent below the ruling prices of jobbers outside of the State, and we supplied about from one-fourth to one-third of the twine required in the State last season. On a good crop year we will probably not be able to manufacture more than one-fourth of the amount required. Our output this year will be about 4,000,000 pounds. I also desire to say for your information that the twine manufactured from American hemp and flax fiber is about equal in grade—that is, as to length, tensile strength, etc.—to the white sisal or standard grade as indicated in my schedule above.

HENRY WOLFER,  
*Warden Minnesota State Prison.*

#### EXHIBIT A.

WARDEN'S OFFICE, MINNESOTA STATE PRISON,  
*Stillwater, Minn., February 18, 1895.*

Hon. S. A. LANGUM,  
*Secretary of the Senate, State Capitol, St. Paul, Minn.*

SIR: Responding to your notification of the 13th instant, I have the honor to report in accordance with the resolution adopted by the honorable the senate of Minnesota, which is as follows:

“*Resolved*, That the warden of the State prison at Stillwater is hereby requested to furnish, for the use of this legislature, a full statement of the various sums of money appropriated for the purpose of purchasing and operating the twine factory at said prison, together with all sums used incidentally in any way in the purchase of material, in the care, storage, hauling, and sale of the produce, including expenses of officers and agents and rebates given on sale. That such statement contain, in addition, a statement of the amount of twine manufactured and sold each year; the price at which sold, as near as may be; the amounts carried over unsold each year; the amount of unsalable twine made; the amount and value of twine on hand; the sums in full received each year on sale of twine, and the total so received since the factory was established; also, whether any twine has been sold on time, and, if so, how much remains uncollected and how such uncollected balance is secured.

“That the warden is also requested to advise this legislature whether, in view of all the facts, including as a first consideration the highest good of the prisoners, the legislature should continue and enlarge upon the work of manufacturing twine in the prison.”

The accompanying separated tabulated statements of each year's transaction connected with the manufacture of twine from the beginning of its operation up to the present time, together with a full recapitulation of all matters pertaining thereto,

showing the disposition of all appropriations, etc., furnished by our chief clerk, will fully inform you on all matters pertaining to a full and complete knowledge of all business connected with the manufacture and sale of binder twine in this prison. Over one-half of the amount of twine manufactured during the year ended July 31, 1893, was carried over, owing to the unfavorable conditions caused by the demoralized condition of the twine market. This amount, together with the manufactured product of the year ended July 31, 1894, was placed on the market last season. In order to meet all necessary competition and effect a clearance of the entire product without any unnecessary loss to the State, the board of managers adopted such measures as they deemed necessary to accomplish this end. The fact that nearly the entire product was disposed of under conditions favorable and satisfactory to consumers, and with such a small loss to the State, is proof that the best interests of all concerned was wisely subserved.

The management has been obliged to sell a large proportion of the twine manufactured in this prison on time. A refusal to so accommodate would unquestionably have necessitated the closing down of the twine plant long ago, with a large stock of unsold twine left on hand. An unusually large amount of twine was sold on time this last season, consequent upon conditions heretofore mentioned, consequently our uncollected balance at this time of the season is much larger than former years; but considering the hard times and the difficulty in making collections in all lines of business, I think we have collected fairly well. The whole amount of bad debts on our books from the beginning of the operation of the twine plant up to the present season, will not exceed \$1,500. The uncollected balance outstanding from last year's sales is in such shape that the percentage of loss from bad debts will be very small. Some of them, however, will have to be carried over until next fall.

As to the matter of advising the legislature whether, in view of all the facts, the legislature should continue and enlarge upon the work of manufacturing twine in the prison, I would respectfully suggest that if it is the policy of the legislature to continue the manufacture of twine at all, there can be no question but that the best interests of the State and all others concerned will be best subserved by putting in a system of hard-fiber machinery as soon as practicable. We have been obliged to compete with hard-fiber twines under great disadvantages for the past three years. The price of hard fibers, sisal, and manila has steadily declined, while the market price of hemp to-day is higher than it was three years ago. This unfavorable condition, from the present outlook, bids fair to continue.

A good system of long-line machinery would enable the State to manufacture twine under conditions equally as favorable with outside factories. There is, as you will notice, an unexpended balance of \$15,683.82 of the old twine plant appropriation still available and now in the hands of the State treasurer. It would require an additional appropriation of not more than \$9,000 to put in a system of hard-fiber machinery to manufacture sisal and manila twine, with a capacity of from 7,000 to 10,000 pounds per day. We can not continue to manufacture hemp twine and compete with sisal and manila without an increasing loss to the State. This is the only soft-fiber factory now in operation in the United States. All of the others gave up the unequal contest two years ago.

The manufacture of twine does not furnish the prisoners with employment that will enable them to learn a trade at which they can earn an honest living upon their discharge from prison. This furnishes a serious objection to it as a prison industry, yet the force of argument in favor of its continuance, on the other hand, because of its benefit to a large class of our taxpayers, appears to justify the continuance of this industry, at least to a moderate degree. The board of managers, in its biennial report to the governor, recommended the purchase of long-line machinery, provided it was the policy of the State to continue the manufacture of twine as a prison industry. Upon its recommendation His Excellency Gov. Knute Nelson, in his biennial message to the legislature, fully advised as to the wisdom of speedily putting in suitable machinery for the manufacture of hard-fiber twine.

All of which is respectfully submitted.

HENRY WOLFER, *Warden.*

## JUTE AND HEMP CARPETS.

(Paragraph 269.)

### STATEMENT SUBMITTED BY THE LAMOND & ROBERTSON COMPANY, OF PATERSON, NEW JERSEY.

PATERSON, N. J., *December 31, 1896.*

DEAR SIR: In accordance with your request, we beg leave to submit to you the following statement of our attitude, as well as those engaged

in the same business of manufacturing jute and hemp carpet, in reference to Schedule J of the bill known as the Wilson bill.

If you will kindly refer to the tariff law of 1890, known as the McKinley bill, under Schedule J you will find, in paragraph 361, that yarn made of jute had a duty of 35 per cent ad valorem placed upon it; and under heading of paragraph 363 you will find that hemp and jute carpets and carpetings were protected to the extent of 6 cents per square yard, which, if we calculate from the price at which carpet was sold per yard, would be really a protection of about 50 per cent ad valorem. While the Wilson bill of 1894 was under consideration, and before it was printed as amended, you will find under Schedule J, paragraph 267, that yarn made of jute had a duty of 30 per cent ad valorem, while under the heading of paragraph 269 it will be seen that hemp and jute carpets and carpetings were to be protected to the extent of 4 cents per square yard, which would be at least a protection of about 34 per cent ad valorem.

Mr. Babbit, of the Chelsea Jute Mills, had frequently been in Washington working in behalf of Schedule J, but was forced to leave this country on business prior to the close of the session of the House of Representatives. His place was taken by Mr. Turner, of the Barbour Mills, of this city, who went to Washington, and did his utmost to have a proper amount of protection put upon the flax, jute, and hemp business. When Mr. Turner left Washington, it was supposed that paragraph 269, Schedule J, would remain as it was at that time, namely, a duty of 4 cents per square yard, which would be, as above stated, a protection of about 34 per cent ad valorem. Instead, however, of remaining so, through evidently some misunderstanding, the bill was passed as follows: The duty on yarn made of jute, as per paragraph 267, Schedule J, was left at 30 per cent ad valorem, while paragraph 269, which deals with the manufactured article, namely, carpets and carpetings, was changed from 4 cents per square yard to 20 per cent ad valorem; or, in other words, instead of affording any protection to the manufacturers of jute and hemp carpets, the bill actually gives a protection of 10 per cent ad valorem to the foreign manufacturer.

The result of this policy was very quickly seen in the fact that a number of our own manufacturers were entirely driven out of business, and those who remained in business and run their mills did so not by manufacturing solely hemp carpets, but by turning out, so far as possible, lines of specialties that have enabled them to tide over the last two years; while on the contrary the Scotch mills have been running full time and throwing their product upon our market to the detriment of our manufacturers.

A great number of our manufacturers think that a duty of from 55 to 60 per cent ad valorem would not be out of the way, but we feel that the more conservative we can be in the matter the better, and would suggest that, in order to have even a moderately adequate protection, the duty on yarn raw material should be left at 30 per cent ad valorem, while the duty on the manufactured article should at the very least be 15 per cent more, or a duty of 45 per cent ad valorem. The object of leaving the jute yarn on a 30 per cent basis would be to afford protection to our own spinners, while the manufacturer who takes the spun yarn, has to dye it, wind it, and weave it into carpets, should at the very least have 15 per cent of a duty over and above that which is afforded to the spinners. Even this would be barely sufficient to make up the difference in the cost of turning out

manufactured carpet. We trust that you will be successful in having the Committee on Ways and Means consider this question favorably.

Thanking you in advance for your kindness, we sincerely hope that you will have a successful session, in which we feel confident you will in the future, as in the past, play no unimportant part.

THE LAMOND & ROBERTSON COMPANY.

P. S.—Since the above was written we have learned that it is the intention of the manufacturers in our line of business to ask a return to the McKinley tariff rate, or 6 cents per yard on the manufactured carpet. This, of course, would suit us much better than what we have asked for.

## JUTE CARPETS.

(Paragraph 269.)

### AN INDUSTRY THAT HAS BEEN PRACTICALLY WIPED OUT.

PLYMOUTH, PA., *December 26, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

Since the passing of the Wilson bill the jute carpet industry has been practically wiped out, as 20 per cent, the present duty, does not cover the extra cost of labor in this country. The Wilson bill also puts our raw material (jute yarns) 10 per cent higher than manufactured goods, viz, 30 per cent, making it impossible to run our mills. To meet the duty on yarns and the extra cost of labor we ought to have a tariff of 6 cents a square yard, with a fair and just tariff on China mattings, which are now flooding our markets.

WILLIAM MENZIES,  
*Of the Plymouth Carpet Mills.*

## FLAX AND COTTON NETTING.

(Paragraph 272.)

### STATEMENT SUBMITTED BY MR. IVERS W. ADAMS IN BEHALF OF THE NETTING MANUFACTURERS.

BOSTON, MASS., *January 9, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

The undersigned is authorized to represent the flax and cotton netting manufacturers and begs leave to offer the following:

We ask for a renewal of the act of 1890 (clause 367). We ask that the new bill shall contain the specific features of the act of 1890. We would emphasize our desire for specific duties in the strongest possible manner.

If, however, ad valorem rates should be determined in the new bill we ask that upon flax gill nettings, nets, webs, and seines 15 per cent shall be added to whatever ad valorem rates may be placed upon flax threads and twines, of which they are made.

IVERS W. ADAMS,  
*Treasurer American Net and Twine Company,  
Representing the Netting Manufacturers.*

## OILCLOTH.

(Paragraph 273.)

## STATEMENT OF MR. J. CRAWFORD LYON, OF BALTIMORE.

SATURDAY, *January 2, 1897.*

Mr. LYON said: Mr. Chairman and gentlemen of the committee, the gentleman who just preceded me I regard as an alarmist, and one statement he made is actually untrue. He said all these fabrics of jute were admitted into this country free of duty as burlaps. If he were as familiar with the decisions of the Board of Appraisers as he ought to be before making such a statement he would not have said so. That there are fabrics of jute entitled to free entry I do not deny, but I do deny that they are ever permitted to enter free when they were twilled in weave or when they are made of double-reel warp and single-reel filling. Only fabrics that are composed of single warp and single filling have been permitted to pass as burlaps. They may be starched or not; they may be striped or not, but if the weave is changed they become a manufactured jute and dutiable at 35 per cent.

The CHAIRMAN. You admit if it is plain weave, although it may have a great many other uses than bagging, then it comes in as a burlap?

Mr. LYON. I do not admit anything, sir. I say that bags for grain and burlaps suitable for making bags for grain have been imported for years with a colored stripe, whether one, or two, or three, or a dozen colored stripes if the width of 40 inches is shown, it matters not. The distinction of burlap officially is that it is a plain woven fabric of jute, and if double-reel yarn is used and the weave is changed the classification is changed, and if the single warp is used and they make it twilled, then the classification is changed.

The CHAIRMAN. If it is plain weave I understand you to say it is admitted as a burlap on the ground it may be used for making bags, although it is not?

Mr. LYON. It is what is known to the trade as burlaps.

The CHAIRMAN. I simply wanted to know how you defined burlaps. They are supposed to be imported for the purpose of making grain bags, and now appear to be imported for other purposes?

Mr. LYON. Oh, you can take a grain bag and make yourself a pair of trousers if you like and have a side stripe.

Mr. PAYNE. They import them for that, no matter what the color is?

Mr. LYON. I am not sure whether they will admit a solid colored one or not.

The CHAIRMAN. That plain body they make, would that come in under burlaps?

Mr. LYON. There has just been, I believe, a decision of one of the judges of the State of New York which very clearly decided that is not a burlap in the meaning of the act. Now, there are just three samples among this lot that would be passed or have been passed. I speak from personal knowledge on this subject, for I raised the contention in 1894 and early part of 1895 that under the liberal reading of the act a jute burlap, even if it were twilled, should be admitted free of duty 40 inches wide. I had to pay 35 per cent ad valorem on the invoice to get possession of the goods. I protested and appealed, and the Board of Appraisers sustained the classification of the collector.

It has been carried to a higher court, not by me, but the decision of the Board of Appraisers was affirmed. That disposes of the statement the gentleman made in reference to the free entry.

The CHAIRMAN. As far as twilled goods are concerned, where it is twilled the rule has been that it should not be included as burlaps.

Mr. LYON. Even for plain weaves, if doubled reel yarn is either warp or filling it is not a burlap, but if a single reel yarn of a plain weave it is the burlap of commerce which has always been admitted as a burlap even under the act of 1890—

The CHAIRMAN. When it was dutiable it was a matter of no consequence, and now it is on the free list of course they are coming in in large quantities, and we want to know what is included in the word "dutiable."

Mr. LYON. I think the gentleman attempted to mislead you when he stated that it was admitted free of duty. The object which brought me here was to talk about oilcloths and linoleum under the new schedule. I do not see any of my friends the enemy present, but I have no doubt they will be here before long. They have always made a contention for a lavish protection and got it.

Under paragraph 273 of the existing tariff law, oilcloth and linoleum, and all other oilcloth, except silk oilcloth, is dutiable at a rate that restricts importations and lavishly protects domestic manufacturers. It reads as follows:

Oilcloth for floors, stamped, painted, or printed, including linoleum, corticene, cork carpets, figured or plain, and all other oilcloth (except silk oilcloth), and waterproof cloth, not specially provided for in this act, valued at twenty-five cents or less per square yard, twenty-five per centum ad valorem; valued above twenty-five cents per square yard, forty per centum ad valorem.

The present law affords more protection than the acts of 1874 and 1883, and but little revenue under it is obtained, although the consumption is enormous and growing by leaps and bounds. All contention for an increase in duties should be regarded with suspicion and subjected to rigid investigation. If this is done you will find that floor oilcloth and linoleum are converted burlaps, and table oilcloth is converted cotton cloth; that burlaps come in duty free (see paragraph 424½ free list); that the cotton cloth used is cheaper here than abroad; that the industry is not in its infancy, having existed in this country for more than seventy years, one of the existing manufacturers dating back to 1817, and three others to 1832-1845, the four firms or families rating in mercantile reports in the millionaire class; that at least three manufacturers are engaged in banking as presidents or principals; that oilcloths on cotton backs, known as table oilcloths, and imitation leather cloths, were produced in this country earlier than elsewhere, and, where now manufactured abroad, are known as "American baizes and leather cloths," of which none are imported but are freely exported; that linoleum chiefly differs from oilcloth in the coating of the jute fabric foundation, which is, both for oilcloth and linoleum, a 10 to 12 ounce burlap, the same both in count and weight that bags for grain are made of duty free under paragraph 424½; that this cheap duty free foundation, when oilcloth is produced, is filled with a cheap size, and coated with cheap ochery, earths ground in oil, petroleum, and pine-tree products, which, when spread by machinery and dried by artificial heat, becomes what is known as a "body cloth" or "blank," the thickness and weight of which is regulated in the spreading or coating machines, through which the sized jute cloth and plastic earthy material is passed in conjunction; that in making linoleum, the base fabric is covered with a mixture of

pulverized cork and oxydized linseed oil, called "cement" or "mash," applied by calendars or rollers, the thickness or gauge being controlled by the operator, and, produced in this way, differs from floor oilcloth, both being used for the same purpose, i. e., covering floors, and for no other purpose; that burlaps are duty free, and that cork is duty free; that the ocher, resins, gums, petroleum, and pine-tree products used, are as cheap or cheaper in this country than abroad; that the recognized best ocher for linoleum making is mined and refined at Cartersville, Ga., and is largely exported, foreign makers paying 15 per cent more for it than makers do here; that linseed oil, though dutiable at 20 per cent per gallon of  $7\frac{1}{2}$  pounds, is not imported by oilcloth and linoleum manufacturers, only 12,002 gallons, about 242 barrels of 50 gallons each having been imported in 1896, valued at \$4,553.30, but in the form of flaxseed is exported largely, aggregating hundreds of thousands of bushels in good crop years; that the price of oil in Chicago has been recently as low as 25 cents per gallon of  $7\frac{1}{2}$  pounds, a figure lower than the price abroad; that a deluge of oil is, by old and new processes out of domestic seed, produced yearly in this country by mills in and out of the trust; that glue and starch are exported, and are as cheap here as abroad; that white lead, Charlton white, red lead, litharge, vermilion nopal red, Indian red, chrome yellow, orange chrome, ultramarine blue, burnt umber, drop black, venetian red, metallic brown, etc., are merely used as print colors on the top surface of the body cloth, like printing ink, and average about as cheap here as abroad, according to quotations in the leading trade papers, viz, the Oil, Paint, and Drug Reporter, of New York, and the Oil and Colourman's Journal, of London; that whatever difference exists is trivial, the articles named being only used to ornament the top surface in printing; that printing is now, and for the past five years has been, done by world-beating machinery of American invention and manufacture, which in 8 colors will do the work of 80 hand printers.

You will also find that the complete conversion of coarse jute, duty free fabrics, into floor oilcloth and linoleum, and coarse cotton cloth (cheaper here than abroad) into table and imitation leather cloth, is now the result of ingenious machinery throughout the entire process; that printing machinery made in this country is so much superior to any in existence, that the largest foreign manufacturers have, during the past three years, provided themselves with it, had it set up and started by Americans, and its use abroad is spreading yearly; that the leading manufacturers in the United States are now highly favored by natural advantages and existing national legislation, and have for years supplied all the oilcloths, both floor and table, consumed in this country, and nearly if not quite seven-eighths of the printed linoleum; that in the United States there are 4 makers of linoleums, 11 makers of floor oilcloths, 10 makers of table oilcloths, all except one being located in Maine, New York, New Jersey, and Pennsylvania; that in paying wages by machine piecework, the labor cost per square yard is about as cheap here as abroad; that the net wholesale price of the grades chiefly sold throughout this country and consumed by the masses is as follows: table oilcloths less than 10 cents per square yard, imitation leather cloth less than 15 cents per square yard, printed floor oilcloth from 12 to 16 cents per square yard, printed linoleum from  $18\frac{1}{2}$  to 30 cents per square yard; that the existing duties on these grades, all costing 25 cents or less per square yard, is 25 per cent ad valorem, and affords a lavish protection, and if any existing duties are to be reduced on this ground, and for purposes of increasing the revenue, this duty should be reduced

to not more than 20 per cent ad valorem in justice to the needs of consumers and the Government; that the importation of oilcloth has practically ceased; that the importation of printed linoleum is not above one-eighth of the estimated consumption, the remaining being now supplied by the four makers here, two of whom are capitalized at \$800,000 and \$1,000,000 each, and the other two at \$400,000 and \$450,000, respectively, these exact figures being a matter of public record.

You will also find that all are very close corporations, and chiefly family affairs; that any increase in the existing duty will completely prohibit importation, deprive the Government of all revenue from this source, and put it in the power of the four makers here to squeeze the public, and they have never been charged with neglecting their opportunities, for not long ago they were guilty of the act; that all foreign makers issue printed price lists, and United States consuls abroad are accurately informed as to values, so that charges of undervaluation are false and unfounded; that as oilcloth and linoleum manufacturers, as a Member of Congress said on the floor, have secured an exorbitant tariff on the ground that their printing was done by hand, and having turned out their men in favor of machines, really get for their money and machinery the protection they asked for "flesh and blood."

J. CRAWFORD LYON,  
For LYON BROS. & Co.,  
*No. 6 South street, Baltimore.*

Mr. GROSVENOR. Do you mean us to understand the bank presidents have made their money out of the manufacture of oilcloths?

Mr. LYON. If you will allow me to proceed, when I have finished I will answer any question you ask, for I am not accustomed to public speaking.

Mr. GROSVENOR. But I should prefer you should answer the questions as we go along.

Mr. LYON. I make the statement and stand by it, and I can sustain it by irrefragable proof.

Mr. GROSVENOR. That bank presidents have made——

Mr. LYON. You can draw your own inferences, sir. Those are statements of facts I made.

Mr. GROSVENOR. We generally prefer that gentlemen shall answer questions at the time we put them.

Mr. LYON. I will engage to answer any question you ask to the best of my ability, I promise you that.

Mr. GROSVENOR. Suppose we should insist upon its being answered now, what will you do?

Mr. LYON. Then if you insist, I will tell you what I will do. I will answer you, but I only ask you as a matter of courtesy that I be allowed to proceed, as I have some facts here which can not be——

Mr. GROSVENOR. I do insist upon an answer as to what you mean to imply by saying that certain bank presidents are engaged in the manufacture of oilcloth.

Mr. LYON. I imply nothing. I make the statement that they are also engaged in the manufacture of oilcloth and have become bank presidents or principals of banks.

Mr. GROSVENOR. Perhaps they were presidents before?

Mr. LYON. That I know is not so.

Mr. GROSVENOR. That is what I am trying to get at. Then you imply they made an unreasonable profit out of the oilcloth and went into the banking business?

Mr. LYON. I allow you to imply anything you like.

Mr. GROSVENOR. Then you do not mean anything?

Mr. LYON. I make a statement of facts, that they were manufacturers of oilcloth and to-day they are bank presidents or principals.

Mr. STEELE. I suggest that the gentleman be allowed to print if he is not going to answer any questions.

Mr. LYON. I will answer any questions you ask.

Mr. STEELE. That is different——

Mr. LYON. But you must not charge me with implying anything.

Mr. GROSVENOR. I only asked what you did imply, whether that statement of yours meant anything or did not mean anything.

Mr. LYON. I beg your pardon. I did not understand you.

Mr. GROSVENOR. I was trying to ascertain from you whether you intended to imply anything by your statement.

Mr. LYON. No, sir; nothing.

Mr. GROSVENOR. Why did not you give the color of the hair of the gentlemen who are engaged in the manufacture just as well?

Mr. LYON. I do not think, my dear sir, the color of the hair has much to do with it as the color of their money.

Mr. GROSVENOR. That is not an answer.

Mr. LYON. I will read an extract from the testimony of Mr. George W. Blabon.

The CHAIRMAN. If you will suspend for one moment I will state that there are a large number of people who desire to be heard here, and we desire that you will condense what you have to say. Of course it may all be printed in order that the time of the committee may not be taken up, but we desire to hear a large number of people, and if you take up a large amount of time it will prevent other persons from being heard. You are reading, I believe, editorials from newspapers?

Mr. LYON. I am sustaining the position that a trust can be formed.

The CHAIRMAN. We must insist upon a limitation of time.

Mr. LYON. I only desire ten minutes' time, and if you will allow me that you can call the watch on me.

Mr. TAWNEY. You say in 1894, after the passage of the Wilson bill?

Mr. LYON. No, sir; it was 1894, before the passage of the Wilson bill.

Mr. DOLLIVER. What is that from?

Mr. LYON. "Carpets, Wall Papers and Curtains," showing the possibility of the establishment of this trust, and that, in fact, one was formed by one branch.

Mr. PAYNE. Who is the author of that statement?

Mr. LYON. "Carpets, Wall Papers and Curtains."

Mr. PAYNE. But who is the author of that statement you read?

Mr. LYON. A trade paper known as "Carpets, Wall Papers and Curtains," edited in New York by W. P. Simmons & Co. To show you how manufactures will change, I will go back to 1890 and read you an extract from the testimony of Mr. Blabon.

Mr. TAWNEY. What branch of the business is now being operated by a trust? You said a moment ago that one branch of this business at the present was in a trust.

Mr. LYON. This is from the "Carpet and Upholstery Trade," June 15, last——

Mr. TAWNEY. Answer the question I asked.

Mr. LYON. The table-oilcloth trade.

Mr. TAWNEY. That is what I wanted to know. We can read that ourselves.

Mr. LYON. There is now an arrangement by which a clearing house has been formed.

Mr. JOHNSON. Do I understand you to say the importation of oilcloth has diminished or practically ceased?

Mr. LYON. I said practically ceased.

Mr. JOHNSON. I have a statement here from the Treasury Department—

Mr. LYON. I have, sir, the same, and I will read it to you.

Mr. JOHNSON (continuing). Which indicates that for 1893 there were eight hundred and seventy-odd thousand yards of oilcloths, valued at less than 25 per cent, and nearly twice as many yards imported in 1896, and when I come to those valued at more than 25 per cent I still find an increase.

Mr. LYON. But they were not oilcloths?

Mr. JOHNSON. They are so classified here. How would you explain it?

Mr. LYON. It is linoleum. There are four makers of linoleum in the United States and eleven makers of oilcloth.

Mr. TAWNEY. What is your business?

Mr. LYON. I am a merchant.

Mr. TAWNEY. Importing?

Mr. LYON. Yes, sir; but I am not a one-part actor, I beg to advise you.

Mr. PAYNE. Do you import burlaps as well as oilcloths and linoleums?

Mr. LYON. I have done so, and that is the reason I so well know what I am talking about as far as these goods are concerned.

Mr. DOLLIVER. Do you know the course of the prices of these goods during the last ten years?

Mr. LYON. I do not know anything else.

Mr. DOLLIVER. What has been the course of prices?

Mr. LYON. Downward.

Mr. DOLLIVER. How has the home valuation of these goods run during the last ten years?

Mr. LYON. The price has been downward, but not from competition of foreign makes.

Mr. DOLLIVER. How does it compare now with ten years ago?

Mr. LYON. Well, if you want a table of that, I will furnish it with pleasure.

Mr. DOLLIVER. I wish you would.

Mr. LYON. Now I have here, which every one can read, the imports of oilcloth and linoleum for the years 1893, 1894, 1895, and 1896 compared.

Mr. DOLLIVER. What is that taken from?

Mr. LYON. It is taken from Imports for Consumption and Duties Collected, prepared by the Bureau of Statistics, Worthington C. Ford, Chief of Bureau, folios 269 and 349. I have taken them myself and rearranged them, showing the average for each year and the total imports for all the years at a glance, and the total amount of revenue and the—

Mr. PAYNE. You are aware the revenue was greater in 1893 under the law of 1890 on linoleum and oilcloths by 30 per cent than it was in 1896?

Mr. LYON. I do not admit it in reference to these articles.

Mr. PAYNE. The official statistics seem to show—

Mr. LYON. This is official, sir. The total imports of all oilcloths and linoleum from 1893 to 1896 were in value \$1,654,485, making an average per year of but \$413,000.

The CHAIRMAN. You are averaging it under two different laws. Why do you combine them? You are averaging under two different laws.

Mr. LYON. I want to show how little the importation is in comparison with the consumption.

The CHAIRMAN. Let us have the imports of 1893 and 1896, and the revenue at each time.

Mr. LYON. It is all here.

The CHAIRMAN. Read it if you have it all there.

Mr. LYON. In 1893, valued at 25 cents per square yard and less rate of duty 40 per cent ad valorem, the values were \$160,000 and duties \$64,000. In 1894—

The CHAIRMAN. Now will you also state for 1893 the value above 25 cents per square yard?

Mr. LYON. The value above 25 cents per square yard for 1893, \$255,389, and \$146,817 duty.

Mr. PAYNE. Making \$210,000 duty paid that year.

Mr. LYON. I have got the entire sum collected from all oilcloths for four years, \$654,000.

Mr. PAYNE. You are spreading too much.

Mr. LYON. I assure you these are copies—

Mr. PAYNE. If you will give us now 1896 in that connection you will oblige me.

Mr. LYON. Why, certainly, I will do that with pleasure. In 1896 valued at 25 cents or less per square yard, \$266,000.

The CHAIRMAN. Would not the quantities be more desirable if you want to show that rather than the value in each case?

Mr. LYON. No, I think it would mislead you.

The CHAIRMAN. Because the values are constantly depreciating, and therefore a larger quantity would be required to make the same value in 1896.

Mr. LYON. You must be referring to the fact that we are constantly increasing the consumption.

The CHAIRMAN. Let us get the quantities now.

Mr. PAYNE. Your idea is the consumption has increased in 1896 over 1893?

Mr. LYON. The claim I make is simply this—

Mr. PAYNE. You answer my question. Is it not your idea the consumption was greater in 1896 than in 1893? That is a plain question.

Mr. LYON. The consumption was greater in 1896 than in 1893, yes.

Mr. PAYNE. That is all; go on.

The CHAIRMAN. And it is in oilcloths and carpets, more than in anything else?

Mr. LYON. You talk about oilcloths being imported, whereas it is linoleum, and that is where you confuse yourself. There is not a man who knows anything about the oilcloths who will contradict me, either. There are only four makers of linoleum in this country.

Mr. PAYNE. We are talking about the whole paragraph. We are talking about what is imported under this paragraph, whatever it is.

Mr. TAWNEY. You claim it is all linoleum?

Mr. LYON. Yes, sir; I claim that there are only four makers of linoleum in the United States.

Mr. PAYNE. Above 25 cents per yard in value in 1896, what were your imports and duties?

Mr. LYON. In 1896? I have it here; \$244,936, and the revenue was \$97,974.

Mr. PAYNE. So the revenue in 1893, under this paragraph, was \$45,000 more than it was in 1896 under this paragraph?

Mr. LYON. Do you want to know why that is?

Mr. PAYNE. I asked you if that is true?

Mr. LYON. Yes, it was; but it is due to a certain cause.

Mr. PAYNE. Your idea is that by continuing to reduce the percentage of duty you would increase the revenue?

Mr. LYON. I want to point out in this, valued above 25 cents a yard, that that mostly is what is known as inlaid linoleum, with material twilled through in part, and this costs about 75 cents gross and about 55 to 60 cents net.

Mr. EVANS. Do you think linoleum is cheap or high to the consumer?

Mr. LYON. It has cheapened. I know it has been cheapened, and due chiefly to the little competition coming from abroad. Shut that out and you will see the prices go up to the consumers.

Mr. TAWNEY. You have suggested there are only four concerns engaged in the manufacture of linoleum?

Mr. LYON. Yes, sir.

Mr. TAWNEY. And that the consumption is enormous and profits large? Why have not more people engaged in the business?

Mr. LYON. If the profits were generally known, there would be more competition. Really the whole thing is run in families. Take George W. Blabon, who has about three-fourths of the shares. Then there is his son Davis, holding the position of secretary-treasury, and one or two others.

Mr. TAWNEY. Do you know whether or not there has been any effort on the part of those engaged in the business to prevent other persons from going into the business?

Mr. LYON. I know there has been an effort by those engaged in the business to combine and raise prices and restrict production and all that sort of thing.

Mr. TAWNEY. But they have not interfered with anybody else's commencing the business, and I understand you to say the prices have been going down?

Mr. LYON. I do not know that I can answer that question, because they have never interfered with my going into it.

Mr. RUSSELL. You stated that the consumption for 1896 increased over that of 1893 and 1892?

Mr. LYON. Of course I have no data for that beyond the fact it is common public knowledge.

Mr. RUSSELL. In that period did the four manufacturers of linoleum increase their plants any?

Mr. LYON. Yes, they did. Would you like to have what I know about it? You can get it by reading. I do not want to take up any more time of the committee, but I personally vouch for the truth of every thing contained in these sheets.

The CHAIRMAN. You will leave that with the stenographer.

Mr. LYON. I can be found at any time, and I pledge myself to answer any questions to the best of my ability.

Mr. WHEELER. I understood you to say that cotton cloth that is used for these oil tablecloths could be produced more cheaply in this country than anywhere else?

Mr. LYON. They are quite as cheap if not cheaper than made abroad. They are 48 by 48 and can be made in the South very cheaply.

Mr. WHEELER. The labor cost of the manufacture of oilcloths per square yard is cheaper here than abroad or as cheap?

Mr. LYON. I say the system now pursued is by ingenious machinery throughout the entire process and the work is paid for by piecework and the cost per square yard is probably no more than it is elsewhere.

Mr. WHEELER. I understand practically there is no revenue at 25 per cent?

Mr. LYON. I say practically none compared with what it might be if an equitable duty was placed upon the article.

Mr. WHEELER. And if the duty was increased there would be no revenue at all?

Mr. LYON. The people would have to pay more for their goods.

Mr. EVANS. What is your line of business?

Mr. LYON. I am a merchant.

Mr. EVANS. An importer?

Mr. LYON. I am, sir. And, as I said to the gentleman who asked that question before, I am not a one-part actor. I can do other things besides import.

Mr. WHEELER. Are there any other gentlemen who appear in behalf of the people on this question?

Mr. LYON. I was about to say I unfortunately have been on the wrong side of the fence, but I will tell you gentlemen here I am a Republican in good political standing. I support protection as a sound protective theory, but not an abuse of it.

Mr. WHEELER. What do you mean by people on the other side?

Mr. LYON. I mean my friends the enemy, the manufacturers.

Mr. WHEELER. I was referring to the people of the United States.

#### **ADDITIONAL STATEMENT OF MR. WILLIAM RUTHERFORD.**

Mr. RUTHERFORD said: Mr. Chairman and gentlemen of the committee, I have no objection to being called an alarmist, but I have objection to being called a misrepresenter of the facts. The clothing which I have here is twilled, striped. We import it because we could not make it.

Mr. PAYNE. Is it imported by yourself?

Mr. RUTHERFORD. Yes, sir.

The CHAIRMAN. According to the official reports for 1893 the duties that have been imposed upon these various oilcloths, linoleums, etc., under paragraph 273, and the imports, are as follows: Imports, 123,457 yards; revenue, \$210,000. In 1896 there we imported 224,495 yards, from which there was a revenue of only \$164,000, showing an increase of 50 per cent in the imports and a decrease of 33 per cent in the revenues.

### **OILCLOTH AND LINOLEUM.**

(Paragraph 273.)

#### **SCHEDULE OF RATES AND CLASSIFICATION RECOMMENDED BY VARIOUS MANUFACTURERS.**

PHILADELPHIA, PA., *December 22, 1896.*

##### **COMMITTEE ON WAYS AND MEANS:**

The undersigned manufacturers of oilcloth and linoleum desire to submit to the consideration of the committee the following statement in reference to duties on oilcloth and linoleum, and trust that what we ask for may meet with your approval.

The tariff of 1883 imposed a duty of 40 per cent on oilcloth, linoleum, etc. At that time there was but one manufacturer of linoleum in the United States, and he manufactured under an English patent and was protected by the patentee to the extent of his product. These patents expired in 1888, and taking this condition into consideration, the act of 1890 made a division in the schedule, making oilcloth and linoleum valued at 25 cents per square yard and less, 40 per cent—the same as in the act of 1883; but on oilcloth and linoleum valued at 25 cents per square yard and over, the duty was made 15 cents per square yard and 30 per cent ad valorem.

At this time 25 cents per square yard did about mark the difference between oilcloth and linoleum; but the result of the act of 1890 was the establishment of three additional factories in the United States for the manufacture of linoleum, representing an investment of over \$1,000,000 and giving employment to 800 men.

That the duties under the act of 1890 were not excessive is proven by the Treasury reports, which show that in 1893 the imports were double the imports of 1891, and that the revenue derived from oilcloth and linoleum in 1893 was three times that of 1891.

The act of 1894 reduced these duties on both classes of goods; the 40 per cent duty on oilcloth and linoleum valued at 25 cents per square yard and less was reduced to 25 per cent ad valorem, and the compound duty of 15 cents per square yard and 30 per cent ad valorem (equivalent to 57 per cent) on oilcloth and linoleum valued at 25 cents per square yard and over was reduced to 40 per cent.

On account of the increased competition caused by the building of these three factories, cheaper grades of linoleum were made and sold, so that 25 cents per square yard no longer represents the difference between oilcloth and linoleum.

*T al imports.*

| Year.      | Square yards. | Value.     | Duties.       |
|------------|---------------|------------|---------------|
| 1891 ..... | 610, 308      | \$157, 934 | \$78, 271. 63 |
| 1892 ..... | 972, 356      | 267, 465   | 128, 928. 57  |
| 1893 ..... | 1, 333, 447   | 415, 710   | 210, 136. 57  |
| 1894 ..... | 673, 258      | 225, 745   | 111, 158. 93  |
| 1895 ..... | 1, 885, 112   | 502, 011   | 168, 581. 85  |
| 1896 ..... | 2, 024, 495   | 510, 018   | 164, 495. 05  |

The reason for the falling off in 1894 was the general stagnation in business caused by anticipated action of Congress in the matter of the tariff and also on the part of the importers' desire to avail themselves of the low tariff rates which were anticipated and realized under the Wilson bill.

By again referring to the Treasury reports quoted above you will find that while the imports of 1896 were nearly double those of 1893 still the revenue obtained in 1896 was nearly \$50,000 less than that obtained in 1893.

To prevent undervaluation we would ask that duties be made compound and not ad valorem. There are reversible cloths made which are linoleum on one side and oilcloth on the other, and to prevent complication from arising from this we would ask that no distinction be made between oilcloth and linoleum, and would therefore ask that the wording of the schedule be made the same as in the act of 1883, viz:

Oilcloths for floors, stamped, painted, or printed, including linoleum, corticene, cork carpet, figured or plain, and all other oilcloths (except silk oilcloth), and water-proof cloth not specially provided for.

And that the rates be fixed at 15 cents per square yard and 30 per cent ad valorem.

The 2,000,000 yards imported in 1896 is nearly one-half of the entire product of the United States, and should you adopt the schedule and rates we propose above, even if the imports should only be one-half as large as those of 1896, the revenue derived from this 1,000,000 yards would be over \$60,000 more than the revenue of 1896.

Labor on oilcloth and linoleum is about 30 per cent of the cost value, and wages in this line of business are double in the United States to what they are in Great Britain.

The above rates are asked for under the assumption that your committee will take burlaps, which are the foundation of oilcloth and linoleum, from the free list and place them on the dutiable list, in order to afford the manufacturers of jute protection, and also to increase the revenue.

Thomas Potter, Sons & Co., Incorporated, H. A. Potter, Vice-President; The Geo. W. Blabon Company, Jno. C. S. Davis, Secretary and Treasurer; Josh. Wild & Co.; The American Linoleum Manufacturing Company, Henry Mackay, Vice-President; The Nairn Linoleum Company, Peter Campbell, Treasurer; Farr & Bailey Manufacturing Company, Edwd. L. Farr, Treasurer; J. C. Dunn & Co.; P. J. Murphy & Co.; R. H. & B. C. Reeve.

## LINEN HYDRAULIC HOSE.

(Paragraph 273½.)

### STATEMENT SUBMITTED BY THE EUREKA FIRE HOSE COMPANY, OF NEW YORK, N. Y.

NEW YORK, *December 31, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We beg to present for the consideration of your committee the following statements concerning linen hydraulic hose.

Under the present tariff linen hydraulic hose is afforded only the protection given by a differential rate of 5 per cent between the duty imposed on flax yarns, from which it is made, and the duty imposed on hose itself. The tariff rate for flax yarns is 35 per cent ad valorem (paragraph 274), and that on linen hydraulic hose 40 per cent (paragraph 273½). Under the tariff of 1890 flax yarns valued at more than 13 cents per pound were taxed at 45 per cent ad valorem (paragraph 370), and linen hydraulic hose 20 cents per pound (paragraph 368).

Under proposed bill of the House of Representatives of 1894, flax hose yarns were to be taxed at 30 per cent ad valorem (paragraph 272), and linen hydraulic hose, 35 per cent (paragraph 273).

Every tariff act proposed or enacted since 1890, therefore, grants to linen hydraulic hose protection equal to at least a 5 per cent differential between yarn and hose rate, and we respectfully pray that in any changes that may be made in linen schedules by you, at least that amount of protection will be retained.

The experience of the American hose manufacturer during the period prior to 1890, when tariff on yarn and hose were uniform, demonstrated fully that we could not successfully compete with the foreign manufac-

turer under such conditions, but we trust that our request will seem to you to be so moderate and reasonable that it will be unnecessary for us to submit evidence in support of our petition.

EUREKA FIRE HOSE COMPANY.  
GEO. A. WIES, *Treasurer.*

## FLAX THREADS AND YARNS.

(Paragraph 274.)

### STATEMENT SUBMITTED BY THE DUNBARTON FLAX SPINNING COMPANY, OF GREENWICH, N. Y.

GREENWICH, N. Y., *January 9, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

Since the advent of the Wilson bill our business has been seriously hampered by undervaluations of foreign yarns and threads at the custom-house, and while we have personally appeared and protested against these undervaluations, and have lately succeeded after a lengthened period in partially stopping them, yet we feel that the present system of ad valorem duties opens the way to great undervaluations which are difficult to detect and which have unfairly injured our trade. We are engaged in manufacturing flax yarns and threads on both sides of the Atlantic, and we feel that a reasonable protection should be given us sufficient to balance the difference in wages paid in our American factory over that which we pay in our Irish factory. The raw material and supplies in our goods amount to 50 per cent of their value, labor forming the other half. In Ireland our workers receive just one-third the wages we pay in New York State, and the raw material being free to each of us, makes the material and labor cost there about 67 cents in each dollar, so that a duty equal to 50 per cent ad valorem is necessary to cover the difference in the labor cost. We therefore beg to suggest that the following specific duties, which are equivalent to 50 per cent ad valorem, would be a just and proper tariff:

Threads, twines, or cords made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, twelve cents per pound. Finer than five lea or number, an additional duty of three-quarters of a cent per pound for every lea, or part of a lea, of fineness.

Or, failing a specific schedule, we suggest the following ad valorem:

Threads, twines, or cords made from yarn composed of flax, hemp, or ramie, valued at twelve cents per pound or less, six cents per pound. Valued at more than twelve cents per pound, fifty per cent ad valorem.

On bleached shirting linens, counting more than one hundred threads to the square inch, counting both warp and filling, and from thirty-five to thirty-seven inches in width, thirty-five per cent ad valorem.

Paragraph 277. All manufactures of flax, hemp, jute, or other vegetable fiber, except cotton, or of which these substances, or either of them, is the component material of chief value, not specially provided for in this act, forty per cent ad valorem.

In regard to our raw material known as "flax not hackled or dressed," we would suggest that it remain on the free list, for the following reasons: Flax for fiber purposes is not now grown in the United States in any quantity, nor do we believe that it can be made commercially profitable to the farmer. Our factory is situated in the only section of the United States where flax has been raised in large quantities for fiber purposes, and twenty years ago in this locality there were 20

or 25 flax dressing mills, but owing to various circumstances no flax is to-day grown in this locality. The crop is a very uncertain one, requires a great amount of labor, and climatic conditions are unfavorable to the growth of the fiber and to its proper treatment after being grown, and we do not think that a duty on raw material, unless very high, would make it a remunerative crop to the farmer. Believing in the protection of American labor, we would respectfully suggest that the following duties be placed on hackled flax:

265. Flax hackled known as dressed line, one and one-half cents per pound.

This being the actual labor cost of hackling in our American mill over work of the same class in our Irish factory. The average cost of hackling each pound of dressed line in our mills here is 3 cents per pound.

All of which is respectfully submitted for your consideration.

DUNBARTON FLAX SPINNING COMPANY.  
Per J. W. WALLACE, *Treasurer*.

## COLLARS, CUFFS, AND SHIRTS.

(Paragraph 275.)

### STATEMENT SUBMITTED BY REPRESENTATIVES OF THE COLLAR AND SHIRT MANUFACTURERS' ASSOCIATION.

TROY, N. Y., *January 1, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

*Tariff laws of 1883.*—Collars and cuffs, as manufactures of flax, with duty of 40 per cent; shirts, as manufactures of cotton, with duty of 35 per cent; shirting linens, with duty of 35 per cent.

*Tariff laws of 1890.*—Linen collars and cuffs, 40 per cent ad valorem, 30 cents per dozen pieces specific; cotton collars and cuffs, 35 per cent ad valorem, 15 cents per dozen pieces specific; shirts, 55 per cent ad valorem; shirting linens, 35 per cent ad valorem.

*Tariff act of 1894.*—Linen collars and cuffs, 30 per cent ad valorem, 30 cents per dozen pieces specific; cotton collars and cuffs, as cotton clothing, 40 per cent ad valorem; shirts, in whole or part of linen, 50 per cent ad valorem; shirts, entirely of cotton, as cotton clothing, 40 per cent ad valorem; shirting linens, 35 per cent ad valorem.

This industry experienced no foreign competition until 1886. The foreign competition, beginning in 1886, increased rapidly until curtailed by the customs law of 1890. There is no combination or trust existing among the manufacturers of shirts, collars, and cuffs. Protection has saved, not enlarged our trade. Prices have not been advanced to consumers, but average less, owing to the active domestic competition. The manufacture of shirts, collars, and cuffs is about the only industry remaining in this district which gives employment to a large number of women and men. Sixty per cent of the cost of production is paid for labor. Not more than one-half of the work is done in factories. The rest is done in families in the city and the surrounding country. Ninety per cent of this work is done by women.

Because of the rate of duty accorded to the manufacturers of linen collars, cuffs, and shirts in the existing tariff law, and particularly the retention of the specific duty, they have been largely spared from the disaster attendant upon the close competition with low-priced foreign labor and

have been able to maintain wages and do a fair business, considering the general condition of trade. The menace of European and the probability of Japanese competition render it desirable to restore the duties provided by the customs law of 1890.

The absence in the customs law of 1894 of a specific duty on cotton collars and cuffs has led the European manufacturers to change their tactics, and instead of confining their exportations to the better grades of linen goods, have been sending to this country lines of goods made entirely of cotton, which, although attractive in appearance, and represented (except at the custom-house) as linen, possess the inferior wearing quality inherent to cotton collars. We dread the excessive importation of these spurious goods upon the revival of business, and particularly urge a revision of the duty, which, to be effective, should be largely specific.

In the existing law only shirts which are made in whole or in part of linen are accorded a classification. Shirts which are made of cotton are now rated with wearing apparel, under section 258, as manufactures of clothing, at 40 per cent ad valorem. This condition favors the importation of foreign shirts, and the now popular colored percale and madras shirts are made entirely of cotton. This fact demonstrates that these shirts should bear the same rate of duty as shirts made in part of linen.

We therefore ask for the following rate and classification: Collars and cuffs entirely of cotton, 25 cents per dozen pieces and 25 per cent ad valorem; collars and cuffs composed in whole or in part of linen, 30 cents per dozen pieces and 30 per cent ad valorem; shirts, other than knit shirts, composed wholly or in part of linen, cotton, or other vegetable fiber, 50 per cent.

The request is based on the assumption that the rate of duty on shirting linen will remain at 35 per cent. Shirting linen can not be made here, as has been again demonstrated during the past five years.

CHARLES H. CORLISS,

EDGAR K. BETTS,

EDWARD O. HOUSE,

*Collar and Shirt Manufacturers' Association.*

## LACES.

(Paragraph 276.)

### STATEMENT SUBMITTED BY THE COUNTESS CORA S. DI BRAZZA SAVOYREN NEE SLOCOMB.

NEW ORLEANS, LA., *January 4, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

The necessity of a high tariff for revenue and protection does not exist with regard to handmade laces for the five following reasons:

(1) Because, owing to the high ad valorem duties of 50 per cent upon the importation of handmade lace into the United States, the exaggeration of the sum charged restricts the importation, which would increase in proportion as the rate were reduced, for it has been seen that objects of luxury at cheap prices are as much called for as necessities.

(2) Because this handicraft, which has been proved by statistics and long experience a most successful means toward the moralization and civilization of the most miserable classes in a community, is now

suffering the danger of extinction all over Europe, because of the rapid development and easy production of machine-made lace. The lace makers have reached the lowest wage possible in seeking to hold their own against machine-made lace. European nations have recognized this and, in consequence, have different rates of duty for the hand-made and machine product, and their revenues and industries are rather promoted than decreased thereby. England, which has developed handmade lace more rapidly than any other country, and is also one of the greatest producers of machine-made lace, has found the greatest growth of hand lace making to have been during the period of admission free of duty; whereas in the time of the Restoration, when prohibitive duties were placed on the importation of lace and colonies of lace makers were introduced at great expense to foster the development of the industry within the Kingdom, lace making did not take root, but the only consequence of the Government endeavors and the prohibitive duties was a vast organized system of smuggling.

(3) Thus it will be seen that the prohibitive rating of handmade lace does not foster its development. It requires another quality of life and surroundings than that existing in the congested centers of population of the United States. Furthermore, the wages for its production, which vary from 10 to 30 cents for a ten-hour day of labor, will not tempt the women of a class which would be intelligent enough to produce handmade lace, even with an augmentation of wage equal to the 50 per cent of duty now charged, for under four years of practice a woman would be unable to earn more than 30 cents a day, and her highest aspiration could not exceed 45 cents. It is self-evident that other industries and trades pay better in the United States. The more sedentary and retiring European woman, however, who has acquired the art in early childhood, picks up and lays down her congregated lace work with the ease of a stocking knitter. She is economical, and her life is so simple and her necessities are so few that she finds the cash earned hereby a considerable adjunct to the wages of her male relatives, and, if necessity requires, can by this means support herself and her young children until they are old enough to learn her trade. Emigration from the lace-making regions is consequently extremely rare and the standard of morals remarkably high.

(4) A high rate of entry duty on handmade lace is no protection to the machine lace-making industry of the United States. On the contrary, it induces the importation of fine imitations of handmade laces, which are foisted upon the credulous public at an exorbitant profit. This is to the detriment of the consumer as well as of the United States machine lace manufacture, for machine-made lace does not wear like and can not really replace handmade lace for certain especial objects.

The remedy for the above would be an increase or the doubling of the customs duties upon foreign manufactured machine-made laces. As the bulk of importation is at present in this quality of goods, the revenue would be materially increased thereby and the home industry protected and developed. Furthermore, as about 800,000 women and children are occupied at present in producing handmade lace and in Europe the industry will continue to spread so long as a livelihood can be earned in following it, the free entry of handmade lace into the United States would contribute toward the removal of the danger of a too rapid immigration of women and children, who, the easiest of all individuals, become paupers and a prey upon the community. Furthermore, the taste of the people would become cultivated and the standard of home produced machine lace elevated by contrast with the beauty, perfection,

and durability of the imported laces. Handmade lace in the United States would enter the place it should occupy, on a level with all works of human ingenuity, manual dexterity, and artistic design and execution. The material used counts as nothing in its production, the dexterity and art knowledge of the producer and her time forming the entire capital invested.

(5) By placing handmade lace upon the free list the Government would in no wise augment the expense or difficulty of expert work and inspection at the custom-house. Handmade lace no more resembles or is to be confused with machine-made lace than oil paintings with chromolithographs. It is recognizable by fraying or unraveling. As the law now stands, handmade lace produced before a certain period is admitted free of duty. It is impossible for the greatest European expert to recognize the age of a piece of handmade lace once it has been washed; and as all the modern lace-producing centers are copying the antique designs, it is impossible to avoid the entry of a great deal of modern washed lace, which is invoiced as "antique." Furthermore, the small bulk of all the finer grades of handmade lace and their great value, which enforces exorbitant duties at the present rating of 50 per cent ad valorem (a fine quality of lace 4 inches wide, capable of passing through a ring 1 inch in diameter, pays from \$5 to \$20 a yard duty), is an irresistible temptation to tradespeople and lace fanciers to smuggle, hiding the rich laces in the folds and paddings of dresses, quilts, etc., and basting them on to underwear.

Furthermore, the true value of the handmade lace can not be known; it is fictitious, for it fluctuates according to the demand, and many a true bill of lading at a depressed period in the trade will appear false, while another on the contrary which appears true on a novelty will be far below the price paid to the producer. Of all the textile arts, therefore, handmade lace is the least manageable under an ad valorem duty, and common sense and economy would recommend to the Government a total exemption therefor, such as other works of art now enjoy. The country would be enriched by the importation of vast quantities of beautiful laces, which would service as useful models in all forms of decoration.

In case the exemption of lace (handmade) from all entry duty can not be considered, I could suggest a palliative, if so desired. I could also prepare a detailed statistical memorial on the handmade lace industries, though out of consideration of the volume of matter before the committee I have introduced none here. The laces I should suggest to exempt from all customs duty would be classified under the following heads: Needle, or point lace; pillow, or bobbin lace; crochet and Irish cut lace; mixed point or mixed stitch lace, and macrame, or knotted lace.

A dispassionate desire to serve the vast sisterhood of wage-earning humanity and to facilitate honest trade and fair dealing, as well as a long study of social economics and the beneficent influence on emigration of the free entry of handicrafts into countries where there is a demand for artistic objects, has inspired this memorandum. I trust this question of handmade lace can be made the stepping-stone to the enlightened study of the effect of customs duties and international commerce upon emigration. The question which I now present involves the daily bread of 800,000 honest women, who are contented to earn the tenuous price paid for their art, provided they need not leave their homes and relatives.

I am sure, therefore, this subject will receive a careful consideration

from the Committee on Ways and Means, and will have as much weight with them as if it had been presented by a syndicate in proper form with voluminous details and numerous quotations in proof of the facts for which I hereby simply vouch with my signature.

THE COUNTESS CORA S. DI BRAZZA SAVOYNAN, NEE SLOCOMB,  
Formerly of New Orleans, La.; permanent addresses in America, 111 Broadway and 254 Madison avenue, New York City; foreign address, Castello di Brazza, near Udine, Friuli, Italy.

**STATEMENT AND RATES SUBMITTED BY THE JENNINGS LACE  
WORKS, OF BROOKLYN, N. Y.**

BROOKLYN, N. Y., *January 11, 1897.*

COMMITTEE ON WAYS AND MEANS:

When the business of manufacturing laces in this country was commenced the duty was 60 per cent, and laces then were not so undervalued as they are at this date. Lace machinery is very intricate and costly to make, none being manufactured in this country. Therefore all used here is imported, paying a duty of from 40 to 45 per cent. Lace machines weigh from 3,000 to 10,000 pounds; freight charges are very heavy, and it requires an expert to put them together and start them to work. There is no class of textile fabrics so difficult to make or that takes the operator so long a time to learn and become skilled in the art as lace. It has always been difficult to obtain persons in this country who would devote the time or had the patience to learn the art. The great cost of producing new patterns of lace by machine is the making of the first piece. After that the more pieces made the cheaper it can be sold.

The wages paid to lace operators in this country are 50 to 150 per cent higher than that paid for the same class of work in England, France, and Germany. Besides, their machinery works day and night, with two sets of hands, while here our machinery is run only fifty-five hours per week.

In England and on the Continent they have a full supply of educated and experienced hands in every branch of the trade. Another advantage they have with their large plants is that they have the ability to keep a machine making one pattern of lace steadily for months, which saves the time and labor spent in changing the pattern or making alterations, as it is called. Another is the ability they have of supplying their machines with the silk, and especially the cotton yarns, of the exact size and twist specially required to make the lace wanted. In this country, there being no demand for these peculiar yarns, some twisted to the right and to the left, and gassed, they are not made here at all, but would be if there was a demand for them. These yarns have to be imported, on which a good duty has to be paid, besides shipping and other charges.

The cost of the labor, from the designing of the pattern to the final finishing of the product, on the average is more than two-thirds of the cost of the materials used.

In the manufacture of lace goods there is much greater waste of material than in any other class of textile goods. Part of this waste occurs in the daily winding of the thousands of small brass bobbins and warp beams, pulling off what may be left on them, and in the clipping and scolloping of the lace and finishing the same.

The business at the best is hazardous, as is well known by all manufacturers in Europe. The article in respect to value is perishable, as the style, make, pattern, and color are all subject to caprice of fashion. Lace is not a necessity, but a luxury in the highest sense, and the duty collected is not a burden on the poor, but, on the contrary, thousands have been benefited and maintained here for many years by our own lace industry.

If it is such a difficult matter to manufacture lace in the United States, the question might be asked, What advantage is it to have the industry here? In reply it may be said that although it has not proved to have been a profitable business in the past, for many have tried and failed in the experiment, yet it has afforded employment to a great many persons during the past twenty years or more. Besides that, it has saved to the country millions of money, simply by the influence and power it has had in Europe and in this market, compelling foreign manufacturers and importers to reduce their prices to American buyers of lace. This benefit has gone to the public and has not accrued to the American manufacturer.

Millions of capital in England and on the Continent of Europe is invested in the manufacture of laces. Large communities are there profitably employed and supported by this industry.

In England the quantity of cotton lace manufactured (it is estimated) exceeds that of silk more than twenty times. The following will give some idea of the importance this industry has been to England:

Mr. John Heathcoat (one of the inventors of lace machines) gave to Nottingham a trade which in fifty years has mainly assisted to quadruple its population; giving employment to 150,000 people, and for the past thirty years adding £4,000,000 (\$20,000,000) annually to the trade of the county. (Encyclopedia Britannica, eulogy of John Heathcoat, 1866.)

As the people of the United States are the greatest users and buyers of laces in the world, this industry, properly cared for in the beginning, would soon afford, directly and indirectly, employment to hundreds of thousands of men, women, and children, besides adding greatly to the wealth of this country.

The lace business affords employment to a great many other industries. More than a dozen can be named. In building a lace machine itself more than six trades or classes of mechanics are employed. So far as we have been able to learn, not one lace machine has ever been built in the United States which would take more time and thought than it would to erect a large dwelling.

If this industry is fairly cared for by Congress, there will soon be introduced into our country an industry that can be carried on in Southern as well as Northern or Eastern States; that will give employment to thousands of people and add many millions annually to the wealth of the country. But at present undervaluations in the invoice price of the goods and understatements of actual quantity in the invoice, owing to insufficient examinations, are the bane of this industry.

No class of goods is so easily undervalued without detection as laces. It would seem best to adopt specific duties as far as possible, with efficient administrative laws to enforce the measures which would accomplish the desired end.

We have to submit the following proposed duty on lace goods:

1. All laces of silk, or of which silk is a component material: Plain nets, netting, veiling, chiffon, gauze, all of which having no figures or patterns, or thick threads interwoven, \$3 a pound and 18 cents a square yard, which would be one-half cent a yard for each inch of width. But in no case shall any of the foregoing articles pay a less duty than 50 per cent ad valorem.

2. All laces of silk, or of which silk is a component material: Edgings, insertions, flouncings, broad laces, veilings, veils, embroideries, irrespective of any commercial or trade name or designation, all of which have figures, or thick or gimp threads interwoven, \$3 a pound and 36 cents a square yard, which would be 1 cent a yard for each inch of width. But in no case shall any of the foregoing articles pay a less duty than 50 per cent ad valorem.

3. On silk lace shawls, collars, fichus, neck laces, wristlets, made up, and women's and children's hats, bonnets, caps, underwear, gowns, and dresses made up and trimmed with lace, and beaded lace, or with gilt threads, 50 per cent ad valorem.

4. On all silk laces, known as or sold as handmade laces, 50 per cent ad valorem.

5. On head nets, or nets for the hair, of which silk is the material of chief value, \$3 per pound and 12 cents per dozen.

As we are not directly interested in the handmade lace made of silk or cotton, we do not propose any rate of duty, but leave that to the committee. The industry affords employment to many poor women.

## LACE WINDOW CURTAINS.

[Paragraph 276.]

### SPECIFIC DUTIES SUGGESTED BY REPRESENTATIVES OF VARIOUS MANUFACTURING FIRMS.

The Wilkesbarre Lace Manufacturing Company, Wilkesbarre, Pa. (employing 400 operatives), the Bromley Manufacturing Company, and the Lehigh Manufacturing Company, Philadelphia, Pa. (employing 1,000 operatives), respectfully represent to your committee:

I. The industry of making lace window curtains, commonly called "Nottinghams," by machines known as "Nottingham lace-curtain machines," is a distinct industry, and its products ought to be classified by themselves, and not with laces and tamboured or embroidered curtains, such as Irish point or Swiss curtains.

II. The above classification ought to be made, because in the case of machine-made or Nottingham curtains, and analogous products of the lace-curtain machines, a specific duty, closely adjusted to varying values, can easily be arranged.

III. We are credibly informed, on inquiry at the Treasury Department and the appraisers' offices, that there is no subject as to which undervaluations are more difficult of detection, and more prevalent. We have heard the opinion expressed that upon lace curtains under the ad valorem duty not 30 per cent of the duty is collected; and this without imputing fault or unfaithfulness to the appraisers in the first instance.

IV. We therefore offer the following amendment as a practical means of applying a specific duty to the curtains produced by our industry, to wit, the machine lace-curtain industry.

We would say as to other lace curtains, that we know of no effective way of collecting the revenue enforcing the protection except by making a compound specific and ad valorem duty, and a proviso for this will be suggested at the close of this memorandum.

We suggest the following proviso and separate classification for the Nottingham lace window curtains:

On all lace window curtains and other articles, finished and unfinished, made on the Nottingham lace-curtain machine and Nottingham warp machine, including lace curtain net, lace pillow shams, lace bed sets, and composed of cotton or other

fabrics, there shall be levied and collected and paid a duty of one cent per square yard on all goods counting five points or spaces between the warp threads to the inch, and half a cent per square yard in addition for each point or space in excess of five to the inch, up to and including nine such points or spaces, and, in addition, a duty of twenty per cent ad valorem. On goods counting ten points or spaces between the warp threads to the inch, four cents per square yard, and one-half cent per square yard in addition for each point or space in excess of ten to the inch, and twenty per cent ad valorem.

The class of curtains commonly known as "Nottingham" are constructed with a warp of parallel threads. The spaces in 1 inch between these parallel warp threads are called "points." Curtains on the Nottingham lace machines can be made in different widths to fit the different divisions of the machine, and in a wide range of qualities. They may be made in eight or more different classes of work, or what is known as "ordinary, double action, bar net, combination, madras, cross ground double spool, and combination swiss;" and so, in a curtain of a certain gauge or "point" the cost may vary from \$1 to \$2 a pair.

The fineness of the curtain depends upon the "points" or the number of the warp threads which are set up in 1 inch. The greater the number of these threads, the finer must be the work; the higher the quality—that is, the more motions of the machine there must be to each inch of the fabric—the more expensive will be the yarn, and the greater the amount of labor. Hence, starting with the basis of 50 per cent as the proper duty, both for revenue and for protection, we proceed to apportion the duty according to the number of warp threads in 1 inch.

We find that the result is that by starting with 1 cent per square yard for the cheapest curtains (those made on a "five-point" machine) and rising by half a cent for each additional warp thread, the duty—with the addition of 20 per cent ad valorem—will, on the average, be as near as possible 50 per cent of a fair ad valorem.

We do not claim that this is absolutely exact, but we do say that it is so nearly so and so simple in application and so automatic in its operation that we are justified in urging its adoption. The practical working of this is that importers will be required to invoice their curtains according to the number of threads in the warp and the number of square yards in the fabric, and the appraisers will always be able to verify the correctness of the invoices merely by placing a measuring glass over the warp threads and counting the number to the inch.

Lace curtains are undoubtedly a luxury, and a proper subject to yield revenue. The fixing of this specific duty will not stop importation, but simply transfer profits from the manufacturer to the Government. The encouragement of the lace-curtain industry will itself furnish revenue from another source, to wit, the duties on yarns. The art of spinning the finer yarns required for the finer curtains, as to which undervaluation is most rife, has not been attained in this country. The lace-curtain industry imports a vast quantity of yarn for its purposes. Therefore, the increasing of the efficiency of the protection now extended to this industry will add to the revenue in this respect.

As appears from the beginning of this memorandum, your memorialists alone employ about 1,500 operatives. The evasion of the protection by means of undervaluation, and also by the importers taking advantage of the administrative law, which allows them to enter goods as having no market value, has seriously crippled the industry in respect of all but the very lowest grade of curtains.

Fifty per cent ad valorem, if faithfully submitted to and collected, ought to be sufficient protection. But with the great variation in cost and value of these curtains, and the impossibility of fixing it by mere

inspection, except by the best expert talent and careful inspection, we say that we are not thriving for want of the protection which the law intends we should have, and we ask that the committee may inquire upon this point at the Treasury Department and the General Appraisers in New York and ascertain for themselves the great difficulty as to this subject which meets the appraisers.

*Illustrative table showing the working of the proposed schedule for lace curtains on a specific and ad valorem basis.*

| Gauge.  | Number of square yards. | Rate per square yard. | English cost. | Ad valorem.      | Duty on low cost. | Duty on high cost. |
|---------|-------------------------|-----------------------|---------------|------------------|-------------------|--------------------|
|         |                         |                       |               | <i>Per cent.</i> | <i>Per cent.</i>  | <i>Per cent.</i>   |
| 6.....  | 10                      | 1½                    | \$0.40        | 20               | 57½               | .....              |
| 7.....  | 10                      | 2                     | .54           | 20               | 57                | .....              |
| 8.....  | 11                      | 2½                    | \$0.76-1.15   | 20               | 56                | 44                 |
| 9.....  | 11                      | 3                     | .86-1.30      | 20               | 58                | 46                 |
| 10..... | 11                      | 4                     | .92-1.50      | 20               | 68                | 49                 |
| 11..... | 11                      | 4½                    | 1.08-1.65     | 20               | 66                | 50                 |
| 12..... | 11                      | 5                     | 1.24-1.85     | 20               | 64                | 50                 |
| 13..... | 11½                     | 5½                    | 1.28-2.00     | 20               | 71                | 53                 |
| 14..... | 11½                     | 6                     | 1.46-2.25     | 20               | 67                | 51                 |
| 16..... | 12                      | 7                     | 1.74-2.35     | 20               | 68                | 55                 |
| 18..... | 12                      | 8                     | 1.92-2.50     | 20               | 70                | 58                 |
| 20..... | 12                      | 9                     | 2.52-2.52     | 20               | 63                | 63                 |

The above table is given by way of illustration to show the working of the schedule which we submit.

The first column of costs shows actual sterling prices, reduced to United States money, taken from the books of Mills & Gibb. They represent the lowest prices at which the square yards to which they apply can be bought. It will be noted that there is considerable difference between the low prices of the Column A and the higher prices of the Column B. This simply shows the capability of the lace-curtain machine to be such that a curtain of the same width and gauge may be so changed in its construction that, as shown in the table opposite the 10 point, the cost may vary from 92 cents to \$1.50. Had we figured our table with Column A only in mind, the fine end would necessarily have suffered, and we would have been no better off than under the present ad valorem duty. Our object has been so to adjust the rate, as to give a fair average of protection, which, we feel confident, would amount to little more than 50 per cent.

At present very few curtains indeed of the low and medium grades are imported, and of the finer curtains the bulk are confined to these grades represented opposite the figures 10, 12, and 14, and at prices ranging from the lowest to the highest. The importations of curtains coming under 16, 18, and 20 points are not sufficiently large to warrant serious consideration in the latter.

It is absolutely essential that the domestic manufacturers of the finer curtains should have at least 50 per cent, and they are organized better than any lace-curtain plants in any other part of the world to make these goods, and they have hundreds of thousands of dollars invested in the machines and machinery fitted to produce them. These machines are now and have long been idle.

The importations of window curtains known as Irish points, Swisses, Brussels, etc., have grown to very large proportions within recent years, and the cheaper grades, those costing from 4 to 25 francs per pair, largely through the exceptional opportunity this class of goods offers for undervaluation, have had a very serious effect on the lace-curtain industry in this country.

In view of this, we ask for a separate schedule for all window curtains other than those designated as Nottingham lace curtains, and provided for as above; and we would submit the following schedule to apply to all curtains tamboured and embroidered by hand or by machinery:

On all lace window curtains, tamboured, and embroidered by hand or by machinery on textile fabrics composed of vegetable or other fabrics, there shall be levied a duty of five cents per square yard and fifty per cent ad valorem on goods valued at five dollars or less per pair, and two cents per square yard in addition for each additional dollar, or fractional part thereof, per pair. All other articles embroidered by hand or by machinery shall be subject to a duty of five cents per square yard and fifty per cent ad valorem.

The lace-curtain industry requires at least this protection, and that it be made efficient by a specific duty. This was demonstrated and conceded as a result of the hearings of the committee on the Wilson bill. Information on this subject was given to the Senate Finance Committee December 20, 1893, and appears in their minutes.

The following information was then furnished to and verified by the Senate Finance Committee, showing the difference in the cost of yarns entering into the manufacture of lace curtains. A large proportion of this yarn is special, and must be imported, because the art of spinning and preparing it has not yet been satisfactorily attained in this country. This element of yarn cost increases with the fineness of the curtains.

COTTON EMBROIDERIES.

(Paragraph 276.)

STATEMENT OF MR. P. F. STONER, OF WRIGHTSVILLE, PA.

TUESDAY, December 29, 1896.

Mr. STONER said: Mr. Chairman and gentlemen of the committee, we are here in the interests of a practically new industry—the embroidering industry, consisting of the manufacturing of lace curtains, Irish point lace, dresser sets, bed sets, shams, etc., and we have a statement prepared which we will submit. In addition to that, however, I want to make a few remarks, and will answer any questions coming up.

We started the manufacture of these goods when we were under the McKinley tariff, and we had a protection, as you know, of 60 per cent on the manufactured goods and 40 per cent on the bobbinet, which forms the foundation of our curtain. This was not a sufficient protection to allow us to go into the manufacture of these goods very extensively, and under the new tariff it cramped us a great deal, so we were not able, in fact, to exist with it alone, but we carried it along with our other work, as we did not want to drop this part of our business.

These goods are used largely in this country, and at this time they are nearly all imported, principally from Belgium, Switzerland, and some of them from Germany, where there is a very low price of labor, and it is along this line that we are crippled—the cost of labor. Our work is embroidered work with machinery, but it is practically, in one sense, hand-work; and as labor is so very much lower in Switzerland and Belgium, we are cut off from entering into the manufacturing of these goods to any great extent, or into the better class of them, on higher grades, in which the labor is the more prominent factor. We know from our little experience that the goods can be made. We have brought with us some samples of our work, and also a few of the foreign-made goods, to show that the goods can be made if the industry has the proper protection and is nurtured. If this is done there is a good future for it in this country.

If there are any questions the committee desire to ask I would be glad to answer them, so far as we are acquainted with this work, and so far as we know about it. I just want to say that the material we use that enters into the construction of this curtain is principally bobbinet.

Mr. PAYNE. Where is that made?

Mr. STONER. It is a foreign product, made in Switzerland, Belgium, and England. There is none made in this country that we know of at the present time.

Mr. PAYNE. Your factory is in Philadelphia?

Mr. STONER. Our factory is now at Wrightsville, Pa.

Mr. PAYNE. What is the name of your company?

Mr. STONER. The Columbia Embroidery Company. We have taken advantage of all the things we could for the purpose of possibly securing some advantages in manufacture which we did not have—so far as labor and other expenses were concerned.

The CHAIRMAN. Is that all you have to say?

Mr. STONER. The rest that I desire to call to the attention of the committee I have prepared in a full statement which I will turn in. I would say at present our goods are classed with laces and edgings, under one paragraph in Schedule J (paragraph 276), and we think that there should be, possibly, a separate paragraph, as that paragraph takes in goods which really are of a different nature or of a different construction. I want to emphasize this fact, that they are not Nottingham curtains. They are embroidered goods, thus differing very materially from the other. We know nothing about the other industry.

Mr. DALZELL. Curtains have an ad valorem duty, do they not?

Mr. STONER. Fifty per cent ad valorem.

Mr. DALZELL. What is your suggestion?

Mr. STONER. With your permission, I will read from my prepared statement. I will read the whole schedule; it is not lengthy.

(Mr. Stoner here read from the prepared statement which follows this oral statement.)

In conclusion, I would say the principal duty we ask is to offset the duty we pay on our material. We do not think it should be taken off. All we ask is something to offset that duty—that you will add a duty to cover the difference of wages between this country and the wages in Europe.

Mr. Stoner's written statement follows:

We herewith present for your consideration some facts relating to the tariff on embroidered goods. Under the tariff law of 1890 these goods were subject to a tariff of 60 per cent ad valorem, and bobbinet, which is used as the foundation material, was subject to a tariff of 40

per cent ad valorem. Under the tariff law of 1894 the tariff on embroidered goods was lowered to 50 per cent ad valorem, and the bobbinet was raised to the same figure. At the rates imposed by the tariff law of 1890 a small beginning was made in the manufacture of embroidered lace curtains, but the amount of protection was found to be sufficient only on a limited number of embroidered goods, and the change of 1894 worked against these goods very strongly, especially in the case of curtains where bobbinet is used.

Embroidered goods, especially curtains made by the Bonnaz embroidery machines, are made chiefly in Switzerland, but also in Belgium, France, and elsewhere. The cost of labor, which is a very large percentage of the cost of these goods, is very low, running from 15 cents a day for the small help to about 25 to 30 cents for skilled operators, where similar labor in this country commands 40 cents or so a day for the small help, and from 60 cents to \$1 or more a day for skilled operators. Under these circumstances even 60 per cent ad valorem is not sufficient to enable this industry to be built up to large proportions in this country.

There are used every year many millions of dollars' worth of these goods, practically all of which is now made in Europe, but which could, with adequate protection, be transferred to a considerable extent to this country, and give employment to a very large number of persons.

Undervaluation on these goods is very easy, on account of the extreme variety of the patterns and sizes, etc., so a specific duty in addition to an ad valorem would make the most adequate protection, and we present herewith a schedule which we believe to be one which will protect these goods properly, and be the means of building up a large industry in this country.

This specific duty we suggest is principally to offset the duty we pay on our material, making the ad valorem duty to cover the difference in rate of wages between this country and Europe.

Curtains not exceeding in size four and one-half yards long by two yards wide made by embroidering by hand or machine, on net, bobbinet, muslin, felt, plush cloth, or other textile fabrics composed of vegetable, animal, or other fibers, fifty cents per pair, and in addition thereto sixty per centum ad valorem when not valued at over two dollars per pair. On similar curtains, when valued at over two dollars per pair, an additional amount of twenty-five cents per pair for each additional dollar, or fractional part thereof, of value per pair.

Sash curtains, by the yard, in patterns without transverse borders, made by embroidering on net, bobbinet, scrim, muslin, linen cloth, or similar plain woven goods, not exceeding thirty-six inches in width, two cents per square yard, and in addition thereto sixty per centum ad valorem when valued at not over six cents per square yard. On similar sash curtain goods not over thirty-six inches in width, and valued at over six cents per square yard, one-quarter of one cent additional for each additional cent or fractional part thereof of value of each square yard.

Tidies, scarfs, bureau sets, bedspreads, pillow shams, table covers, and all other embroidered goods not herein specifically mentioned, made by embroidering by hand or machine on net, bobbinet, muslin, felt, plush, cloth, or other textile fabrics composed of vegetable, animal, or other fibers, five cents per square yard, and in addition thereto sixty per centum ad valorem if not valued at over twenty cents per square yard. On all similar embroidered goods when valued at more than twenty cents per square yard an additional amount of one and one-quarter cents per square yard for each five cents or fractional part thereof of value of each square yard.

#### COTTON EMBROIDERIES AND BOBBINET.

MANAYUNK, PHILADELPHIA, PA.,

*December 11, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We beg to call your attention to a matter in regard to the tariff on embroidered goods which we hope can be remedied in any new tariff

legislation. The embroidered goods we refer to are those known as appliqué and Brussels lace curtains, bedspreads, pillow shams, bureau scarfs, etc. A very large quantity of these goods are used in this country, and all but a very small percentage of them are imported. They are made on the Bonnaz embroidery machines, using different materials for the basis. The principal material on which the curtains are made is bobbinet. In the McKinley bill the duty on the finished curtains was 60 per cent and on the bobbinet it was 40 per cent, but the Wilson-Gorman bill raised the bobbinet (our raw material) to 50 per cent and lowered the finished goods to the same figure, thus cutting us off in both directions. The bobbinet (as far as we can find out) is not made in this country, but is all brought in from England and Belgium. The increased tariff on this was neither a protection nor a revenue move; therefore, as there was none made here, nor any prospects of its being made here, and the revenue was greatly reduced by the consumption being lessened, there was no reason for the increased duty on it, while the duty on the goods made from the material was reduced 10 per cent.

The protection on these curtains, even under the McKinley bill, was never sufficient to enable the goods to be made in any great quantity in this country, although such a large quantity of them is used here. They are mostly made in Switzerland by very low-priced labor. The machine operators do not make more than about \$2.50 to \$3.50 per week, and here we can not get them much under twice that figure. The cutters-out (small help) do not often make much over \$1 per week and sometimes less, and they have to have from \$2 to \$2.50 and more per week here.

As labor is a very large part of the cost of these curtains, especially in the higher numbers, a tariff of even 60 per cent is too low. A specific duty in part would be the best on these goods, as undervaluation is very easy. There ought to be a specific duty of \$1 per pair on all curtains costing less than \$2.50 in Europe and a 40 per cent ad valorem duty besides; between \$2.50 and \$4, a specific duty of \$1.50 and 40 per cent; between \$4 and \$5, a specific duty of \$2 and 40 per cent, and so on.

The bobbinet, which is used for doing the work on, should come in at a low rate of duty, or even free, as there is none made here, and it is such a special industry; only a very few firms in the whole world are making it, and those with very cheap labor, that it is not likely to be made here.

In this case there could be built up in this country a very large industry, employing a large number of people, as the demand for these goods is very large indeed, the imports of them running up into very large figures. In fact, we believe there are millions of dollars' worth of embroidered curtains imported.

J. A. CAMPBELL & BRO.

## HORSE BLANKETS.

TROY, N. H., *December 29, 1896.*

### COMMITTEE ON WAYS AND MEANS:

We would like to call your attention to the matter of the duties on jute goods. Under the present tariff law, the duty on jute yarns is 30 per cent ad valorem. The jute yarns woven into carpets are 20 per cent; if they are woven into bagging or burlap they come in free. Instead of protecting our manufacturers of jutes, such a scale discriminates directly against them. This matter affects us not as jute manu-

facturers, but as manufacturers of horse blankets, since this bagging coming in free operates against the results of home products, the burlap being used on account of its very low value as an inferior substitute for the textile goods of which we are extensive manufacturers. It also operates largely against the use of another American product—cotton ducks—which are also used in the manufacture of horse blankets.

TROY BLANKET MILLS,  
By F. RIPLEY, *Superintendent*.

HOLYOKE, MASS., *December 29, 1896.*

COMMITTEE ON WAYS AND MEANS:

Inasmuch as the present tariff, to the detriment of domestic manufacturers of horse blankets, admits burlaps free, we, as representing that body, respectfully petition that the former duty be restored to these goods. Since the present schedule has been in force, burlaps have entered very largely into the manufacture of cheap horse blankets (in some cases merely shaped to fit the horse, in others lined with a cheap material) which with comparatively little labor can be placed on the market in damaging competition with the domestic woven blanket, hitherto used almost exclusively for horse clothing in the United States, thus throwing into forced idleness American machinery and depriving the American workman of legitimate labor.

The total labor required in making up these cheap burlap blankets amounts to but a few cents each, whereas in the woven fabric horse blanket the labor constitutes one of the principal items of expense.

SPRINGFIELD BLANKET COMPANY,  
E. H. WILKINSON, *Manager*.

## LINEN GOODS.

### STATEMENT SUBMITTED BY THE FRANKFORT LINEN MANUFACTURING COMPANY, OF FRANKFORT, N. Y.

FRANKFORT, N. Y., *January 7, 1897.*

COMMITTEE ON WAYS AND MEANS:

Knowing that the present tariff protection is not adequate to meet and fill the needs and requirements of the linen-manufacturing industry of this country, and that a change having in view additional relief of such industry is proposed, the following facts are respectfully submitted for the consideration of your honorable body having in charge the revision of the tariff:

It is estimated on good authority that there is brought from abroad and sold annually in this country manufactured linen goods to the amount of at least \$23,000,000, while there is manufactured in the United States less than \$1,000,000. This in itself shows that there is something radically wrong in the protection of this important industry, or this state of affairs could not exist. The best linen crashes and like articles in this country are made by the Frankfort Linen Manufacturing Company of Frankfort, N. Y., a concern started two years ago with an authorized capital of \$50,000. This mill is equipped with the finest machinery of its kind in the world, and notwithstanding an honest and economical management, it shows a large yearly deficit on account of foreign competition, which can and should be remedied in the interest

of the American workmen and the building up of this important industrial branch of business.

Nearly a score of linen-manufacturing plants have been established in this country within the past ten or twelve years, but only two or three survive, and the reports from these give no encouragement and they can not much longer exist under present conditions.

In order to develop this industry in this country, it is absolutely certain that the duty must be raised from 35 per cent to at least 50 per cent ad valorem, or to a specific duty of  $3\frac{1}{2}$  cents per yard on all linen crashes. This amount of protection would stimulate new industries in this country, which have been too long neglected, and give revenue and steady employment to thousands of our own people.

In the interest of our own people, having in view the establishment of home industries that will give employment to many thousands of our people and furnish for home consumption an article for which there is a very great demand, we most respectfully ask for such an increase in tariff as will afford ample protection to these industries, and a proportionate increase in the event of a tariff on raw material.

FRANKFORT LINEN MANUFACTURING COMPANY,  
JAMES H. HOARD, *President*.  
H. H. INGHAM, *Secretary*.

#### STATEMENT SUBMITTED BY THE ANCHOR LINEN MANUFACTURING COMPANY, OF LOUISVILLE, KY.

LOUISVILLE, KY., *January 11, 1897.*

##### COMMITTEE ON WAYS AND MEANS:

I see from the reports in the papers that the Committee on Ways and Means is at work on the new tariff. As you are aware, I am engaged in the manufacture of linen goods in this city, and have quite a hard time competing with foreign fabrics. The great trouble with the industry in my line of business is that the raw flax material comes in free; flax yarns cost 35 per cent duty and goods manufactured out of flax are also 35 per cent duty, which is practically, for a manufacturer in that line of goods, no protection at all. As the price I have to pay for my yarns requires a duty of 35 per cent and the cost of manufacturing has no protection, and as you are well aware that wages, labor, interest, and taxes in this country are much more than in foreign countries, I would be pleased to have you look into this matter, and if you think it will be of any advantage will gladly give you data and figures to prove my assertions.

ANCHOR MANUFACTURING COMPANY.

#### STATEMENT SUBMITTED BY ELIOT C. CLARKE, REPRESENTING THE BOOTT COTTON MILLS OF LOWELL, MASS.

BOSTON, MASS., *January 6, 1897.*

MY DEAR SIR: Permit me to suggest why the import duty on linen yarns should be lessened and that on linen cloth increased. On account of an extraordinary increase in the number of cotton mills in the Southern States production of cotton cloth has exceeded consumption. Old Northern mills, being at a disadvantage in producing staple cotton cloths, are trying to produce fine and fancy cloths, now imported. A few, including the Boott Cotton Mills, are attempting to make linen

cloth, which affords a large and hitherto untried market for home industry. At present practically all linens are imported.

The Boott Cotton Mills have made unbleached, half-linen dress goods the past year, and have run 500 looms on them with fair success. Now we are experimenting with linen towels and cloth for pillowcases.

The yarns used in these goods are not made in this country. Almost no linen yarn is made here, excepting coarse carpet yarns and linen thread. The making of linen cloth from imported yarns must come first, and will be followed by the making here of yarns suitable for weaving into cloth.

My investigations prove to me that under the present tariff we can almost, but not quite, make staple linens such as towels, tablecloths, napkins, sheets, etc. With a little cheaper yarn, or a little dearer imported cloth, we can enter the field. If we do so, I believe we shall, in a few years, produce our own linens from our own yarns, and make goods which shall cost the consumer no more than those now imported.

This would help Northern cotton mills by giving them the new industry, and help Southern cotton mills by lessening Northern competition.

ELIOT C. CLARKE,  
*Treasurer Boott Cotton Mills, of Lowell, Mass.*

**STATEMENT SUBMITTED BY RICHARD H. EWART, OF NEW YORK CITY, LINEN IMPORTER.**

NEW YORK, *December 30, 1896.*

**COMMITTEE ON WAYS AND MEANS:**

As I have been largely interested in the importation of linen goods since July, 1869, I wish to present my views on the tariff question, so far as it touches manufactures of flax.

Linens are practically not manufactured in the United States of America, climatic and other causes having led to disastrous results when an attempt was made to develop the industry. A few goods manufactured from flax and cotton have been made here, but the hopes of those who tried to manufacture linens were not realized; and to-day, after years of protection (which has cost the citizens of the United States millions of dollars without establishing any manufacturing industry), only coarse fabrics, such as crashes, can be made here, and I do not think this business has materially increased during the past fifteen or twenty years. As the Government and business men of the country recognized this fact, the rate of duty before the war was 15 per cent. When the necessities of the war pressed, the rate was advanced to 30 and 35 per cent, with the clear understanding that the advance was to be temporary, but it has not since been reduced, although under a 50 per cent rate, which existed for a short time, the manufacturing of linens was not developed or found to be feasible.

Linens are used largely by American manufacturers of collars, cuffs, clothing, bags, trunks, etc., as raw material, and it has been estimated that from \$40,000,000 to \$50,000,000 of American capital is invested in the importation and sale of manufactured linen goods, so I strongly advocate a reduction from the present rate of 35 to 25 per cent, as such a change would benefit millions of consumers, and also probably help the Government by increasing revenue, based on increased importations.

While favoring a specific tariff when practicable, I beg to say that I have never met anyone familiar with the trade, who had prepared, or seen, tables which could be applied specifically. The weights, widths,

and counts of linen goods are so varied that almost any specific tariff would fail. With the existing tariff, or one of 25 per cent ad valorem, and with the low cost of linens, very little opportunity is given for undervaluing, so that a method which might wisely be applied to silks, velvets, etc., would not do for Schedule J. I make this statement while most anxious to be protected in all possible ways from unfair competition, and I may say, in conclusion, that I have never had an invoice advanced in value.

RICHARD H. EWART.

STATEMENT SUBMITTED BY REPRESENTATIVES OF THE LINEN  
TRADE ASSOCIATION OF NEW YORK.

NEW YORK, *January 11, 1897.*

COMMITTEE ON WAYS AND MEANS:

On behalf of the Linen Trade Association of New York, composed of merchants engaged in the importation of linen and jute fabrics, would say, after several conferences on the subject, and in accordance with the desire that we should suggest rates of specific or compound duties, the equivalent of 35 per cent ad valorem, to be substituted for the present ad valorem duties on manufactures of flax and jute in Schedule J, after a thorough and careful investigation of the subject, we find it utterly impracticable to apply any but ad valorem duties to most articles embraced in Schedule J, although we are in hearty accord with the desire to substitute specific or compound rates were it possible.

*Paragraph 277.*—In accordance with the foregoing, we suggest that manufacturers of flax and jute not otherwise provided for continue to pay 35 per cent ad valorem duty. There are no manufactures of any magnitude of flax fabrics in this country, except the Stevens Linen Works in Massachusetts, who confine themselves entirely to producing cheap grades of crash; there are one or two other smaller concerns manufacturing crash, but not to the extent of the Stevens Company. There is, therefore, no reason for a higher duty than 35 per cent ad valorem, as it does not protect or foster any industry, other than mentioned, in this country. We also believe 35 per cent ad valorem duty is the highest rate that will not restrict the consumption of linen goods, and we do not believe lower rates would tend to increase consumption.

These arguments we used in stating our case to the Ways and Means Committee when the act of 1894 was under consideration. Treasury statistics for the fiscal year ending June 30, 1896, prove the statement to be correct; for while business of all kinds throughout our country has been depressed, the consumption of linens under paragraph 277, as shown by Treasury import statistics, has continued at the rate of about \$15,000,000 annually, yielding the Government a larger revenue than were the duties fixed at any other rate. In this connection we wish to state that any higher rate on manufactures of linen would result in an immediate and large increase of importations, which would be far in excess of the normal consumption; these goods would pay the present rate of duty, would be put in consumption under the new increased rates, thus permitting a serious increase in cost to the consumer, which would not be checked by increased domestic production, as we have practically no linen industry in this country, and not likely to have.

*Handkerchiefs made of flax.*—While we would be pleased to have specific or compound rates, the equivalent of the present 40 and 50 per

cent ad valorem rates respectively substituted, we have been unable to discover any plan to suggest, and therefore recommend a continuance of the present ad valorem rates. At present handkerchiefs made of flax are classified in both Schedules I and J. It is recommended that all handkerchiefs made of flax should be classified in Schedule J along with other manufactures of flax. Handkerchiefs made of cotton is a large industry in this country, which the importers of linen handkerchiefs have no wish to disturb or interfere with in any way. It is also recommended that initial handkerchiefs, on which there has been a conflict between the Government and importers, should be treated as plain linen handkerchiefs when the cost of the initial embroidering does not exceed one-half the value of the cloth on which it is worked, viz, 40 per cent ad valorem; when above that limit of cost, duty to be the same as on embroidered linen handkerchiefs, viz, 50 per cent ad valorem.

*Burlaps.*—A coarse fabric of plain weave made of flax or jute, and sometimes a mixture of each, but mostly made of jute. Burlap made of jute, with the exception of cotton bagging, is the commonest and cheapest of all woven fabrics. It is used for making into bags, oilcloth foundations, and wrappers or containers for merchandise. There are no burlaps now made in this country except a few in the San Quentin Prison, California, and Walla Walla Prison, Washington, where the manufacturing of them is done to keep the convicts employed, and not as a commercial enterprise. Under the tariff of 1883, burlaps had a protection of 30 and 40 per cent respectively, for those under and over 60 inches wide, but jute out of which they were made paid a duty of 20 per cent ad valorem. Under the McKinley Act they were more favored by having a duty of  $1\frac{5}{8}$  cents per pound for those under 60 inches wide, which as near as can be computed is the equivalent of 30 per cent ad valorem, and those over 60 inches wide 40 per cent ad valorem, and the jute out of which they were made was duty free. Notwithstanding these favorable duties provided for them in all these years, the industry did not make any progress and there is therefore no reason to believe it could be made to do so in future, and, except for reasons of revenue, might be continued on the free list, as the business of the country has become adjusted to that basis.

But if it is with the idea that they should contribute their share to the Government income, and your committee decide that they shall pay a duty, we then recommend the rate of 15 per cent ad valorem on burlaps made of jute, irrespective of width, as being most equitable for all concerned, based on Treasury statistics on the imports of burlaps for the fiscal year ending June 30, 1896. A duty of 15 per cent ad valorem would yield the Government a revenue of not less than \$1,000,000 annually. As there has been so much controversy resulting in expensive litigation as to what a burlap made of jute is, we would suggest that instead of using that word when framing the new tariff bill, a paragraph be used describing it, viz:

A manufacture of jute, or of which jute is the component material of chief value, plain woven of single yarns, and constructed with single warps and single wefts, counting 35 threads to the square inch and under, to pay a duty of 15 per cent ad valorem; those over 35 threads and under 55 threads to the square inch, 25 per cent ad valorem; when containing more than 3 per cent of dyed yarns, 35 per cent; all other burlaps or manufactures of jute not otherwise specified, 35 per cent ad valorem.

We advocate the ad valorem system rather than specific because it puts all duties on the same basis, and all pay the same rate of duty

proportioned to cost. Specific rates bear unduly heavy on the lower grades. A lower fluctuation of foreign market value makes an increased rate of duty when specific, but a rise in foreign market value, on the other hand, deprives the Government of a considerably increased revenue. Owing to the cheap character of jute fabrics, especially burlaps, and the publicity that is given in the Dundee and Calcutta daily papers as to the market value of goods, it is impossible to attempt fraud or undervaluation without being discovered at once. As an instance we would say, to-day's market price for 40 inch 10½ ounces ordinary burlap in Dundee is about 1½d. per yard, equal, say, to 2½d. Should anyone be disposed to undervalue, it would not pay them to do so for less than 5 per cent, and 5 per cent would be equal to 1½d. per yard, say, 2½d.; but as the fluctuations in the Dundee and Calcutta markets are of smaller fractions than 1½d., anyone attempting to undervalue as little as ½ to 12d., or, say, 2½ per cent, would be detected at once, not only by the consul at the port of shipment, but by the appraisers at the ports of entry in the United States where the shipments arrive. We therefore trust we have clearly demonstrated the superiority of the ad valorem system over the specific, so far as burlaps are concerned.

*Bags and sacks made of jute.*—The specific system better than any other can be applied to bags and sacks made of jute. We recommend that all bags or sacks made of jute, whether new or secondhand, wherever manufactured, pay a duty of 2½ cents per pound.

To briefly summarize the foregoing, we suggest the following paragraphs and rates of duties for manufactures of flax and jute in Schedule J for your consideration, viz:

All manufactures of jute, or of which jute is the component material of chief value, plain woven of single yarn, and constructed with single warps and single wefts, counting 35 threads and under to the square inch, including both warp and weft, 15 per cent ad valorem.

When striped, containing 8 per cent by count or less of dyed or colored warp yarns, 15 per cent ad valorem. Exceeding 8 per cent by count of dyed or colored warp yarns, 35 per cent ad valorem.

When counting over 35 threads, and under 55 threads, to the square inch, including both warp and weft, 25 per cent ad valorem.

When striped, containing 8 per cent by count or less of dyed or colored warp yarns, 25 per cent ad valorem. Exceeding 8 per cent by count of dyed or colored warp yarns, 35 per cent ad valorem.

All manufactures of jute, or of which jute is the component material of chief value, not otherwise provided for, also such manufactures of jute which have been subjected to dyeing, printing, stamping, or painting, not otherwise provided for, 35 per cent ad valorem.

The article commercially known as buckram, manufactured of jute, or of which jute is the component material of chief value, 35 per cent ad valorem.

Bagging for cotton, and gunny cloth, woven with single yarns and constructed with single warps and single wefts, containing under 18 threads to the square inch, including both warp and weft, 10 per cent ad valorem.

All manufactures of flax, tow, or hemp, etc. (see paragraph 277, Schedule J of present tariff), 35 per cent ad valorem.

All bags and sacks, whether new or second hand, manufactured of jute or made of any cloth of which jute is the component material of chief value, wherever manufactured, 2½ cents per pound.

Handkerchiefs made of flax, or of which flax is the component material of chief value, plain or printed, whether hemmed, unhemmed, or hemstitched, not otherwise specified, 40 per cent ad valorem.

Embroidered handkerchiefs, made of flax, or of which flax is the component material of chief value, whether hemmed, unhemmed, hemstitched, or scalloped, 50 per cent ad valorem.

Initial handkerchiefs made of flax, or of which flax is the component material of chief value, where the cost of the initial does not exceed one-half the value of the cloth contained in the handkerchief, 40 per cent ad valorem. When the cost of such

initial exceeds one-half the cost of the cloth contained in the handkerchief, 50 per cent ad valorem.

E. R. BIDDLE,  
H. D. COOPER,

*Committee Representing Linen Trade Association of New York.*

### STATEMENT SUBMITTED BY THE DOUGLAS MILLS, WORCESTER, MASS., RELATIVE TO LINEN GOODS.

WORCESTER, MASS., *January 4, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

I wish to call your attention to and enlist your interest in the import duties now levied on linen yarns and linen cloths. At present they are the same, 35 per cent ad valorem, and I would point out to you that such being the case it is impossible for a manufacturer here to compete against the imported cloth, as the only assistance he gets is the 35 per cent duty on the difference between the price he pays for his imported yarn—on which he must pay the 35 per cent duty—and the value of the imported cloth, which does not nearly cover the difference in the wages paid for weaving that yarn into cloth here and the wages paid for the same work in Great Britain or France.

Now I do not pretend to suggest to you what amount of duty ought to be levied on linen yarns, but I do submit and claim that, in the interest of the manufacture of linen cloth here, a heavier duty ought to be levied on the cloth than on the yarn.

At present, as you doubtless know, the manufacture of linen cloth in this country is almost nil, and so long as the duties on the yarn and on the cloth remain the same it will not, it can not, increase; but I venture to say that if an appreciable difference—say, of  $7\frac{1}{2}$  or 10 per cent—were made between the two, the domestic manufacture of this cloth would be fostered and grow larger year by year. And I will further point out to you that this would occasion no loss to the revenue, as all the linen yarn used would have to be imported and so pay its duty.

I am at present engaged in the manufacture of cotton cloths and know something about making linen goods, and the only thing which prevents me weaving a certain kind of cloth which is largely used in in this country, and of which every yard is at present imported, is that I can not compete against the imported cloth for the reason above stated.

THE DOUGLAS MILLS.

### UPHOLSTERY GOODS.

#### STATEMENT SUBMITTED BY VARIOUS MANUFACTURERS.

PHILADELPHIA, *December 29, 1896.*

#### COMMITTEE ON WAYS AND MEANS:

We, the undersigned manufacturers of upholstery goods, would submit the following for the consideration of your committee: The goods we manufacture are of various kinds, some of all cotton, others of cotton and jute, others of spun silk and cotton, and others of all silk, so that our goods do not have a separate classification, but come under different schedules.

In all of these the present rate of duties is barely sufficient to protect

the labor going into them with the present duties on yarns (which are our raw materials). They stand as follows:

| Goods.          | Present duties on yarns. | Present duties on our products. |
|-----------------|--------------------------|---------------------------------|
|                 | <i>Per cent.</i>         | <i>Per cent.</i>                |

| Spun silk ..... | 30                       | 45                              |

\* Average.

If the rates on any of these yarns should be increased by your committee, it would jeopardize our industry very much unless the duty on our manufactured goods should be increased in proportion. We would therefore ask your committee to either have the duties remain as they are at the present time on cotton, linen, jute, and spun-silk yarns, or give us a corresponding increase in the duty of manufactured goods. We would favor the McKinley bill rates on cotton yarns and manufactured goods of cotton.

We would also beg to call the attention of your committee to the fact that while we pay a duty of 30 per cent on spun-silk yarns, the manufacturers of dress goods who use raw-silk yarns (thrown in this country) have their materials come in free of duty. Our goods come under same classification, and therefore we are at a disadvantage over the dress-goods manufacturers who use raw-silk yarns.

We would also say that we are in hearty accord with the sentiment of the National Manufacturers' Association when they say that they favor the duties being made as low as they can be made consistent with sufficient revenue and protection to American labor.

## SCHEDULES SUGGESTED.

### RATES RECOMMENDED BY THE FLAX, HEMP, AND JUTE MANUFACTURERS OF THE UNITED STATES.

NEW YORK, N. Y., *January 9, 1897.*

#### COMMITTEE ON WAYS AND MEANS:

In compliance with the invitation which your committee has extended to the merchants and manufacturers of the country to present their views on the subject of the proposed revision of the tariff, I submit to you herewith, on behalf of the flax, hemp, and jute manufacturers of the United States, for insertion in Schedule J of the new tariff, a set of rates on flax, hemp, and jute, and manufactures thereof. We also submit

herewith a table showing the rates on all goods of this kind in the McKinley tariff, in the Wilson tariff, and in a column for comparison the rate asked for herein. An examination of this table will show that we ask for practically the restoration of the McKinley rate of duty. Our request admits all raw materials free of duty and the rates of duty asked on these goods in their different stages of manufacture are only the difference between the wages paid in the countries from which these manufactured goods are imported and in this country. Our rates of duty, if adopted by your committee and enacted into law, will produce an additional revenue to the Government, on the basis of last year's importations, of fully \$2,500,000. This fact is easily to be deduced from the accompanying table.

I respectfully make this request to you on behalf of the following manufacturing establishments:

|                                          |                                     |
|------------------------------------------|-------------------------------------|
| Allentown Spinning Company .....         | Allentown, Pa.                      |
| Barbour Bros. ....                       | Paterson, N. J., and New York City. |
| Dolphin Jute Mills .....                 | Do.                                 |
| Sutherland & Edwards Company .....       | Paterson, N. J.                     |
| Wilmington Jute Mills .....              | Wilmington, Del.                    |
| Planet Mills .....                       | Brooklyn, N. Y.                     |
| Buchanan & Lyall .....                   | New York, N. Y.                     |
| Standard Rope and Twine Company .....    | Do.                                 |
| Travers Bros. Company .....              | Do.                                 |
| The A. H. Hart Company .....             | Do.                                 |
| The Hooven & Allison Company .....       | Xenia, Ohio.                        |
| The California Jute Mills Company .....  | Oakland, Cal.                       |
| Cable Flax Mills .....                   | Schaghticoke, N. Y.                 |
| James Thompson Company .....             | Valley Falls, N. Y.                 |
| Marshall & Co .....                      | Kearney, N. J.                      |
| Smith & Dove Manufacturing Company ..... | Andover, Mass.                      |
| Thos. Jackson & Son .....                | Reading, Pa.                        |
| Bentley & Gerwig Company, Limited .....  | New Brighton, Pa.                   |

The above establishments represent nearly the entire flax, hemp, and jute manufacturing industry in the United States, having many millions of dollars invested in plants and employing many thousands of men, women, and children. By a meeting held in New York on December 30, 1896, I am authorized, as chairman of the said meeting, to submit the request which we make herein to your honorable body.

#### RATES RECOMMENDED.

Flax, hackled, known as "dressed line," one and one-half cents per pound.

Hemp, hackled, known as "dressed line," one cent per pound.

Yarn made of jute, single, in skeins and in the gray, not finer than five lea or number, one and one-half cents per pound. Jute yarns finer than five lea or number, or if twisted, dyed, or bleached, or in any way advanced beyond single gray skeins, two and one-half cents per pound.

Yarn composed of flax, hemp, or ramie, valued at twelve cents per pound or less, six cents per pound. Valued at more than twelve cents per pound, fifty per centum ad valorem.

Twines, lines, cords, and rope, valued at thirty cents or less per pound, composed of flax, hemp, or jute, or of a mixture of either of these substances, forty per centum ad valorem.

Threads, twines, or cords made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, twelve cents per pound. If made from yarn finer than five lea or number, an additional duty of three-quarters of a cent per pound for every lea or part of a lea of fineness.

Cables, cordage, and twine, composed of New Zealand hemp, istle, Tampico fiber, manila, sisal grass, or sunn, one cent per pound.

Hemp and jute carpets and carpetings, not over sixteen ounces to the square yard, six cents per square yard. Mattings made from jute, ten cents per square yard and fifteen per centum ad valorem.

Burlaps made of jute, two cents per pound. Bagging and bags and sacks made from burlaps, two and one-quarter cents per pound. Bagging for cotton, gunny cloth, and all similar material suitable for covering cotton, composed of flax, hemp, jute, or jute butts, one cent per square yard.

All manufactures of flax, hemp, or jute or other vegetable fiber, except cotton, of which these substances, or either of them, are the component material of chief value, not specially provided for in this act, fifty per centum ad valorem.

SCHEDULE J.—Table showing McKinley tariff rates, Wilson tariff rates, and rates asked herein, in comparison.

## SOFT FIBERS.

| Wilson tariff .....                                             | 35 per cent ad valorem (in basket clause).                                                              | 35 per cent ad valorem (in basket clause).                                                              | 35 per cent ad valorem.                                                                                                                 |
| Rate asked herein .....                                         | Not finer than 5 lea, 12 cents per pound and ¾ of a cent for each additional lea. <i>i</i>              | Not finer than 5 lea, 12 cents per pound and ¾ of a cent for each additional lea. <i>i</i>              | 40 per cent ad valorem.                                                                                                                 |
| Cloth (material in fourth manufactured state):                  |                                                                                                         |                                                                                                         |                                                                                                                                         |
| McKinley tariff .....                                           | 50 per cent ad valorem.                                                                                 | 50 per cent ad valorem.                                                                                 | Valued at 6 cents per square yard, 1.6 cents per square yard; at more than 6 cents per square yard, 1.8 cents per square yard. <i>b</i> |
| Wilson tariff .....                                             | 35 per cent (in basket clause).                                                                         | 35 per cent (in basket clause).                                                                         | Free.                                                                                                                                   |
| Rate asked herein .....                                         | 50 per cent (in basket clause).                                                                         | 50 per cent (in basket clause).                                                                         | 1 cent per square yard. <i>j</i>                                                                                                        |

*a* About 8 per cent ad valorem.  
*b* About 20 per cent ad valorem.  
*c* About 14 per cent ad valorem.  
*d* About 7 per cent ad valorem.  
*e* About 10 per cent ad valorem.

*f* Average about 60 per cent ad valorem.  
*g* About 60 per cent ad valorem.  
*h* About 50 per cent ad valorem.  
*i* 50 per cent to 65 per cent ad valorem.  
*j* About 33½ per cent ad valorem.

## HARD FIBERS.

|                                                              | Sisal, manila, sunn, New Zealand hemp, and istle or tapico fiber.     |
|--------------------------------------------------------------|-----------------------------------------------------------------------|
| Raw material:                                                |                                                                       |
| McKinley tariff .....                                        | Free.                                                                 |
| Wilson tariff .....                                          | Free.                                                                 |
| Rate asked herein .....                                      | Free.                                                                 |
| Cables, cordage, and twine (material in manufactured state): |                                                                       |
| McKinley tariff .....                                        | 1½ cents per pound; binding twine, 7/10 of 1 cent per pound. <i>a</i> |
| Wilson tariff .....                                          | 10 per cent ad valorem, except on binding twine, which was free.      |
| Rate asked herein .....                                      | 1 cent per pound. <i>b</i>                                            |

*a* 25 per cent ad valorem and about 12 per cent ad valorem on binding twine.  
*b* About 16 per cent ad valorem.

The following table shows the burlaps, bagging, and binding twine imported for the year ending June 30, 1896, which, if imported at the rate of duty proposed by the schedule herein recommended, would produce an additional revenue of \$3,254,114.72. Of course, as these goods are now on the free list under a tariff, there would not be so large an importation, but at the lowest estimate the increased duty would be \$2,500,000.

*Estimated increase of revenue from Schedule J, based on imports for year ending June 30, 1896.*

|                                                                                               |                 |
|-----------------------------------------------------------------------------------------------|-----------------|
| Bagging * for cotton, 1,697,758 square yards, at 1 cent per square yard.                      | \$16, 977. 58   |
| Burlaps (from Calcutta), 83,383,771 square yards, at 2 cents per pound..                      | 833, 837. 71    |
| Burlaps (from Dundee), 145,206,742 square yards, at 2 cents per pound..                       | 1, 452, 067. 42 |
| Bags * made from burlap, 41,455,696 pounds at 2½ cents per pound....                          | 932, 753. 16    |
| Binder twine, * not exceeding 600 feet to the pound, 820,618 pounds, at 1 cent per pound..... | 8, 206. 18      |
| Manila, not exceeding 650 feet to the pound, 1,027,267 pounds, at 1 cent per pound .....      | 10, 272. 67     |

Total increase if imports equal imports of 1896..... 3, 254, 114. 72

It is of the utmost importance that the members of this committee in considering this schedule should bear in mind the difference between the wages paid in countries which compete with us in the manufacture of flax, hemp, and jute. Dollars are paid in the United States where the equivalent of dimes is paid in India, where are located the largest jute mills in the world; quarter dollars in Italy, Hungary, and Russia, where are produced large quantities of hemp, yarns, and twines, and half dollars in other parts of Europe. It is important also to remember that labor cost and existence expenses, which are a large item in the cost of the products of flax, hemp, and jute, are much larger in this country, and therefore a small duty would not equalize the difference between the cost of production in the United States and in foreign countries.

There is one other point that we wish to call to the attention of the committee, and that is that through construction of the law the rate which was intended to be placed on flax, hemp, and jute twines in the two previous tariffs was not collected. And to avoid the repetition of this error, we most respectfully and earnestly request that that part of the schedule which deals with "flax, hemp, and jute twines" be left as we have worded it, whatever the rate of duty imposed.

Under schedule J of the present law the rate on these twines, which are included in paragraph 277, is 35 per cent ad valorem, but paragraph 268 provides that twines made wholly or in part of New Zealand hemp, istle or Tampico fiber, manila, sisal grass, or sunn (all of which are coarse or hard fibers and would never be mixed with the fine or soft fibers, flax, hemp, and jute, except for the purpose of getting the benefit of this lower rate of duty), shall be admitted at 10 per cent ad valorem. We are particularly anxious that the words "in whole or in part," referring to the twines made of hard fibers—that is, of New Zealand hemp, istle or Tampico fiber, manila, sisal grass, or sunn—be left out.

In view of the undervaluations, we have, as far as possible, made the rates specific instead of ad valorem, but have only named the protection which we actually need, not making the figures high with the expectation that they will be cut down. If the reasonable requests which we have made are granted, labor can be fully employed and good wages paid. The results of the present tariff during the past four years have been most disastrous to both employer and employed. If the duty we

\* The imports of these articles will be materially reduced.

ask on burlaps is granted, it will stimulate the manufacturing of this class of goods in this country and the Government will receive a large revenue which it sorely needs.

E. A. HARTSHORN,  
*Chairman Flax, Hemp, and Jute Manufacturers' Meeting.*

**RATES RECOMMENDED BY CHARLES W. HUBBARD, OF THE LUDLOW MANUFACTURING COMPANY, OF BOSTON.**

BOSTON, *December 29, 1896.*

**COMMITTEE ON WAYS AND MEANS:**

We inclose a suggested schedule, giving the rates that we think would be fair and proper and which should give sufficient protection to any well-equipped American mill. These are based on the supposition of free raw material as now existing. If duty be imposed on raw material, then a corresponding increase should be made in the rates of duty on the manufactured article, and in making this increase it should be borne in mind that the manufacturer has to pay duty on a large amount of waste caused in process of manufacture; also that he has to pay interest on duties paid. We would therefore suggest that the compensating duty be made specific and 50 per cent higher than on the raw material.

We give below our suggestions in regard to Schedule J, giving the present tariff, the McKinley tariff, and our suggestions side by side.

|                                                                                                                                           | Present tariff.  | McKinley tariff.        | Should be—                 |
|-------------------------------------------------------------------------------------------------------------------------------------------|------------------|-------------------------|----------------------------|
| Jute yarn .....                                                                                                                           | 35 per cent..... | 35 per cent.....        | 1 cent.                    |
| Bags .....                                                                                                                                | Free .....       | 2 cents.....            | 1 cent.                    |
| Bagging for cotton, valued at less than 6 cents per square yard.                                                                          | Free .....       | 1.6 per square yard ... | 1 cent per running yard.   |
| Bagging for cotton, valued at more than 6 cents per square yard.                                                                          | Free .....       | 1.8 per square yard ... | 1½ cents per running yard. |
| Burlaps (insert bagging clause) ..                                                                                                        | Free .....       | 1½ cents per pound....  | 1 cent per pound.          |
| Cables, cordage, and twine (except binding twine) composed in whole of New Zealand hemp, ixtle, or tampico fiber, manila, or sisal grass. | 10 per cent..... | 1½ cents per pound....  | 1 cent per pound.          |
| Binding twine .....                                                                                                                       | Free .....       | 7/10 cent per pound.... | 5/8 cent per pound.        |
| Yarns or threads composed of flax or hemp, or of a mixture of either of these substances, valued at 13 cents or less.                     | 35 per cent..... | 6 cents per pound....   | 2½ cents per pound.        |
| Valued at over 13 cents .....                                                                                                             | 35 per cent..... | 45 per cent.....        | 3 cents per pound.         |
| All manufactures of flax and hemp not specially provided for.                                                                             | 35 per cent..... | 50 per cent.....        | 2½ cents per pound.        |
| All manufactures of jute not specially provided for.                                                                                      | 35 per cent..... | 2 cents.....            | 1 cent per pound.          |

*Burlaps.*—Under this heading we would suggest insertion of the clause in the McKinley bill “except such as may be suitable for bagging for cotton.”

*Bagging for cotton.*—You will notice our suggestion bases the rate of duty on the running yard. Were the McKinley rate based on the running yard it would be 1.95 per square yard and 2.20 per square yard, or nearly double that suggested by us.

As we confine ourselves to the coarser sizes, the rates we suggest may not do justice to the spinners of the finer grades. We hope you will send us the first rough draft of the schedule, that we may give it careful study.

CHARLES W. HUBBARD,  
*Treasurer Ludlow Manufacturing Company.*

**RATES RECOMMENDED BY THE SMITH & DOVE MANUFACTURING  
COMPANY, OF ANDOVER, MASS.**

JANUARY 8, 1897.

**COMMITTEE ON WAYS AND MEANS:**

Smith, Dove & Co., now known as the Smith & Dove Manufacturing Company, started a mill for the manufacture of linen threads, yarns, and twines at Andover, Mass., in 1835, and have maintained a steadily increasing business in this line at this place since that time. This was the first plant in America to spin flax threads by machinery. We therefore think, that from our long experience, we are in a position to appreciate fully the difficulties in the way of competing with European countries in the manufacture of flax goods without adequate protection.

In considering the various paragraphs of Schedule J and the free list of the tariff bill now in operation, we will touch only upon those that directly affect our own industry.

**FLAX, NOT HACKLED, AND TOW OF FLAX.**

Both of these are now on the free list, under paragraph 497, and we would recommend that these two products remain on the free list, as they do not compete with products grown in the United States. Although much flax is grown in the Northwest, it is raised for the seed, and is therefore unfit for spinning purposes.

**FLAX, HACKLED, KNOWN AS "DRESSED LINE."**

Under paragraph 265 of Schedule J there is a duty on this of  $1\frac{1}{2}$  cents per pound. We would recommend that this duty remain at  $1\frac{1}{2}$  cents per pound. If, however, any change is made in the duty on "dressed line" it should be increased rather than decreased. The flax hackling, or flax dressing, department is the most important, employing the most skilled labor of any department in the flax thread mill. It is here that the quality of each lot of flax is determined, and the final use to which the flax is to be put is decided upon. The men employed here are tradesmen, who have served an apprenticeship of from three to ten years before they become efficient flax dressers and sorters, and, therefore, this is the highest paid department connected with the flax-spinning industry. Every fully equipped mill must have this department in connection with its plant, in order to obtain the best results in manufacturing these goods. The importance of this department from the laborer's standpoint can be better understood by comparison of the relative percentage of wages actually paid by us in our several departments during a full year. Taking the total wages-cost of production in our flax mill for one year, 46.1 per cent was for flax dressing, 18.4 per cent for preparing, 16 per cent for spinning, and 18.5 per cent for twisting; thus it will be seen that nearly one-half of the total labor-cost of production is for flax-dressing, and therefore dressed line is flax goods half manufactured.

There are in the United States several branch establishments of large European manufactories who import their dressed line from the home plants, mainly because the labor in making the dressed line in Europe is less than one-half of the American cost, owing to the difference in wages paid in this department in Europe and the United States.

This difference is greater than  $1\frac{1}{2}$  cents per pound on the dressed line. Any reduction in the present duty would be greatly to the disadvantage of the purely American manufacturers and a corresponding benefit to those doing this important part of the work in Europe. If this duty were so increased as to compel these branch establishments of European houses to do their flax-dressing here, the result would be that they would have to pay out to American labor fully 40 per cent more than at present. One objection raised by these branch establishments against dressing their flax on this side is that they use only the dressed line, and would, therefore, have no market for their tow, but a glance at the importations of flax tow for the past ten years will show that more tow is imported annually by manufacturers like ourselves than these branch establishments could produce were they to hackle their flax on this side.

Paragraph 266. We would recommend that this remain dutiable at 1 cent per pound.

Paragraph 268. As this paragraph now reads in the Wilson bill, there have been importations of flax threads and twines containing only a very small percentage of New Zealand hemp, etc., under a duty of 10 per cent, which should have paid a much higher duty. We would, therefore, recommend that this paragraph be changed to read as follows: "Cables, cordage, and twine composed of New Zealand hemp, istle, Tampico fiber, manila, sisal grass, or sunn, 1 cent per pound."

Paragraph 272. Flax gill netting, nets, webs, and seines should have an additional ad valorem duty of 15 cents beyond the duty recommended for the threads and twines of which they are made, under paragraph 274.

Paragraph 274. Under the ad valorem duty at present applying to this paragraph, we believe that very great frauds were perpetrated by importers by means of undervaluation of invoices, and we would, therefore, recommend that this paragraph be changed to read as follows: "Threads, twines, or cords made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, twelve cents per pound; finer than five lea or number, an additional duty of three-quarters of a cent per pound for every lea, or part of a lea of fineness. Yarn composed of flax, hemp, or ramie valued at twelve cents per pound or less, six cents per pound; valued at more than twelve cents per pound, fifty per centum ad valorem."

Paragraph 277. All manufactures of flax, hemp, jute, or other vegetable fiber, except cotton, or of which these substances, or either of them, is the component material of chief value, not specially provided for in this act, 50 per centum ad valorem.

We believe if our recommendations as noted above meet the approval of your committee, and are embodied in the new tariff bill, the result will be to the advantage of American manufacturers in the flax industry without detriment to consumers of our products in the United States.

#### RATES RECOMMENDED.

Paragraph 497. Flax, not hackled, and tow of flax.

Paragraph 265. Flax, hackled, known as "dressed line,"  $1\frac{1}{2}$  cents per pound.

Paragraph 266. Hemp, hackled, known as "dressed line," 1 cent per pound.

Paragraph 268. Cables, cordage, and twine composed of New Zealand hemp, istle, tampico fibre, manila, sisal grass, or sunn, 1 cent per pound.

Paragraph 272. Flax gill netting, nets, webs, and seines, specific duty as provided in paragraph 274 for the thread contained in the netting, nets, webs, or seines, and in addition thereto 15 per centum ad valorem.

Paragraph 274. Threads, twines, or cords made from yarn not finer than five lea or

number, composed of flax, hemp, or ramie, 12 cents per pound; finer than five lea or number, an additional duty of three-fourths of a cent per pound for every lea, or part of a lea, of fineness. Yarn composed of flax, hemp, or ramie, valued at 12 cents per pound or less, 6 cents per pound; valued at more than 12 cents per pound, 50 per centum ad valorem.

Paragraph 277. All manufactures of flax, hemp, jute, or other vegetable fibre, except cotton, or of which these substances, or either of them, is the component material of chief value, not specially provided for in this act, 50 per centum ad valorem.

SMITH & DOVE MANUFACTURING CO.,  
By J. W. BELL, *Assistant Treasurer.*

## RATES RECOMMENDED BY MARSHALL & CO., OF KEARNY, N. J.

KEARNY, N. J., *January 8, 1897.*

### COMMITTEE ON WAYS AND MEANS:

We would respectfully place before you our ideas on the tariff, taking up the clauses in which we are interested in regular order.

Paragraphs 265 and 266. It is important that these duties should not be reduced, as they are the only protection that a spinner in the United States has to enable him to compete with firms who have mills on both sides of the Atlantic. The wages paid in dressing flax are more than in any other department of a flax mill, and the work is most important, as the sorting is done in the same process and on it depends the regularity of the product. In fact, so vital is this process that were the protection removed it would compel the domestic spinners to transfer this part of their plant abroad.

Paragraph 268. As worded at present, hemp and flax twine with only a small portion (say 10 per cent) of New Zealand hemp, ixtle, tampico fiber, manila, sisal grass, or sunn have been brought in under this clause.

Paragraph 269. The duty on netting which we recommend, 15 per centum more than the duty on the thread of which it is composed, is just sufficient to cover the difference of wages between those paid here and abroad.

Paragraph 274. Our reason for asking a change in this clause is to stop the undervaluations of threads that are constantly going on, which would be entirely prevented by a specific duty. The new duty that we take the liberty of suggesting would be equal, on the general average of threads, to 40 per cent ad valorem.

The finer grades of twine are included with the threads, because it is impossible to draw a distinction, some of the finer twines being actually a high grade of thread.

The reason we ask for this change in the duty on yarns is that their chief cost when made from low-priced flax or tow is in the labor, the material being only a small portion of their cost. In several grades, with the suggested duty, it would be much cheaper to import them than to spin them here.

We are prepared to support the above statements and to show you confidential figures of actual labor costs, etc., whenever desired.

### RATES RECOMMENDED.

Paragraph 265. Flax, hackled, known as "dressed line," one and one-half cents per pound.

Paragraph 266. Hemp, hackled, known as "dressed line," one cent per pound.

Paragraph 267. Yarn made of jute, single, in skeins and in the grey, not finer than five lea (of three hundred yards) or number, one and one-half cents per pound. Jute yarns finer than five lea or number, or if twisted, dyed, or bleached, or in any

way advanced beyond single grey skeins, two and one-half cents per pound. Twines made of jute, forty per centum ad valorem.

Paragraph 268. Cables, cordage, and twine, composed of New Zealand hemp, ixtle, tampico fiber, manila, sisal grass, or sunn, one cent per pound.

Paragraph 269. Hemp and jute carpets and carpetings, six cents per square yard.

Paragraph 272. Flax gill netting, nets, webs, and seines, the specific duty as provided in paragraph 274 for the thread contained in the netting, nets, webs, or seines, and in addition thereto, fifteen per centum ad valorem.

Paragraph 273½. Linen hydraulic hose. This paragraph should be omitted and hose be allowed to go into the "basket clause" at fifty per centum ad valorem.

Paragraph 274. Threads, twines, or cords, made from yarn not finer than five lea (of three hundred yards) or number, composed of flax, hemp, or ramie, twelve cents per pound. Finer than five lea or number, an additional duty of three-quarters of a cent per pound for every lea, or part of a lea of fineness.

Yarns composed of flax, hemp, or ramie, valued at twelve cents per pound or less, six cents per pound; valued at more than twelve cents per pound, fifty per centum ad valorem.

Paragraph 275½. Tapes, etc. There is no need of this clause. The articles named in it should be allowed to go in the "basket clause."

Paragraph 276. Laces, edgings, etc. If the Government desires to increase its revenue, an opportunity is presented to increase duty in this paragraph, which covers many articles of luxury, from fifty to sixty per centum ad valorem.

On bleached shirting linens, counting more than one hundred threads to the square inch, counting both warp and filling, and from thirty-five to thirty-seven inches in width, thirty-five per centum ad valorem.

Paragraph 277. All manufactures of flax, hemp, jute, or other vegetable fiber except cotton, or of which these substances or either of them is the component material of chief value, not specially provided for in this act, fifty per centum ad valorem.

WOOL, AND MANUFACTURES  
OF WOOL.

---

## Schedule K.—WOOL, AND MANUFACTURES OF WOOL.

---

### WOOL.

#### STATEMENT OF MR. JOHN G. CLARK, OF WASHINGTON COUNTY, PA., REPRESENTING THE WOOLGROWERS' ASSOCIATION.

WEDNESDAY, *January 6, 1897.*

Mr. CLARK said: Mr. Chairman and gentlemen of the Committee on Ways and Means, we are very thankful for the privilege of coming before you this morning. I might say at the outset that I am one of the delegates from Washington County, Pa., representatives of the County Woolgrowers' Association. Mr. John M. Berry and Mr. John MacDowell are my associates, and we are practical woolgrowers. We come from a woolgrowing center. We have been in the business from our youth, having served an apprenticeship in taking care of our fathers' flocks, and having the care of our own flocks for perhaps forty years or more, and we think we understand the ins and outs of the business pretty well; and I might say further that what we have to say is not only the feeling of our own county, but of western Pennsylvania, and I might include the States of Pennsylvania, Ohio, and West Virginia, the adjoining States, and perhaps the woolgrowing States of the Union, for that matter, as we think the feeling is about one and the same.

The necessity for protective duties on wool is no longer questioned. The experiment of free wool has convinced every one who has given the subject any attention that wool can not be grown in this country in competition with foreign wools. It has brought destruction to a large proportion of our flocks. It has afforded no reasonable returns for time and labor, and in many cases has brought bankruptcy and distress.

The enactment of free wool was a great crime against the woolgrowing part of the community, and has been a great injury to all. It directly reversed the policy under which we had long prospered, and turned the industry into the hands of foreign producers.

Under former tariff rates a very large proportion of our farm lands were devoted to raising sheep and wool. But as one and another abandons the business they engage in growing grain for market, or

producing milk or butter, or anything that will afford a living. The change has only destroyed the prospects of those already engaged in these pursuits. The country is now filled with farm produce of every kind, at prices below the cost of production. We have no profitable use to which we can apply our farm lands, and they have depreciated nearly one-half in value. Give us an opportunity to grow wool again and a large proportion of our lands will be devoted to pasturage, and hay and grain will be consumed on the farms.

Our wool market has never been overstocked. We have never grown but about one-half of the wool necessary to clothe ourselves.

Adequate protection to the woolgrower is the duty of the incoming Administration. The large majority at our late election was a decision in favor of it, and the question now before this committee is, "What shall the rate of duty be?"

We do not ask an extreme measure. We want something that will commend itself when enforced; something that will not only benefit woolgrowers, but will benefit all. We want a rate that will perpetuate the business by giving a living profit to those engaged in it. Anything short of this would fail in its purpose. There is no class of men so well qualified to decide the question as those engaged in the business and have given it their time and attention. The National Woolgrowers' Association, composed of practical men from all over the States, prepared a bill about one year ago which, in their judgment, would be just to all, and would give fair compensation to woolgrowers. At a recent meeting of this association the same bill was indorsed, and we think is generally favored by those interested in woolgrowing. It is presented to this committee, confidently believing it will fully meet with your approval.

It is not an extreme measure, and it is believed to be the very lowest rate that will give encouragement to the industry. It will not be burdensome to any. The amount of wool consumed by each family is so small that a few cents duty per pound can not make dear clothing. We can refer you to the times when we had the highest wool tariff we ever had as the times when the laboring man could secure as much or more woollen cloth, free from shoddy, for each day's labor than in any other period of our history. This was from 1867 to 1883. The duty on wool under the tariff of 1867 was much higher than we are asking now. Under it the industry prospered as it never did before or since. The change to a lower rate in 1883 gave discouragement and reduced our flocks, and yet the tariff of 1883 was but a trifle below what we are asking now. We refer to this as evidence that we are not asking for an extreme measure.

Grant us this bill and we believe this great industry in which all are so much interested will live. The importance of it is above all estimate. The clothing of our people is almost as important as supplying them with food. Why should we send millions of dollars annually abroad for wool, to the benefit of foreign countries, when we have soil and climate and everything favorable, and men willing to work at the lowest living rates in producing it at home?

With proper protection we will soon grow all the wool necessary for our own use. We can grow it in every grade and style, from the coarsest to the finest. American-grown wools are conceded to be the strongest and most elastic, and just suited for good, durable clothing. To produce it at home will give employment to several millions of our citizens that otherwise must crowd other occupations. We look with

intense interest to this Committee on Ways and Means, believing whatever you recommend will be enacted into law by Congress. Many of us are holding our flocks at a present loss awaiting your favorable action. If you turn this great industry over to foreign producers, it will carry with it a further loss of hundreds of millions of dollars. We believe it would be to the interest of all, and would promote general prosperity, if a tariff law were enacted that would gradually give to the woolgrower, and also to the wool manufacturer, the full benefit of our home markets.

There is one expression here that I would qualify just a little: "The duty on wool under the tariff of 1867 was much higher than we are asking now. Under it the industry prospered as it never did before or since. The change to a lower rate in 1883 gave discouragement and reduced our flocks." I suppose I ought to qualify that by saying that the flocks in the Middle States, and perhaps in New England, were decreased, while at the same time the increase rather was west of the Mississippi River. The statistics will show, I believe, that our flock increased somewhat during the tariff of 1883, and the increase, we think we are safe in saying, was west of the Mississippi River, and not east.

Mr. GROSVENOR. Everything was increased west of the Mississippi River?

Mr. CLARK. I think so.

Mr. GROSVENOR. There was a swift growth there?

Mr. CLARK. I think so. I think that was the case.

Mr. WHEELER. I want to ask a question. I see under class 3 in 1893, under the act, 125,000,000 pounds of wool were imported at 32 per cent. Now, of that same class under the act of 1894, the Wilson bill, only 96,000,000 were imported. We have less importations under the free list than we had under the dutiable list of 32 per cent, and I do not understand it.

Mr. CLARK. Well, I have not looked into the matter, but I would answer that in this way, that the general depression of business was such that shippers and importers did not see proper to bring it in.

The CHAIRMAN. You refer to merino wool of class 3, and those are carpet wools, and are very nearly all imported. Classes 1 and 2 are clothing wools.

Mr. CLARK. My understanding of that is that the change from tariff rates to free wool was directly reversing the order of things and disorganized the business of the country generally. And men did not want to import unless they thought there was going to be business carried on in the United States and the people buy; but the people not being in a condition to buy, they did not want to import, and consequently there were less importations.

Mr. GROSVENOR. I would like to ask you to make a little more definite, and put it into a little more certainty, this general statement you made, that if you can have this tariff you suggest we can grow all the wool we need in the United States. That was your statement.

Mr. CLARK. Yes, something equivalent to that; but I do not know I stated this tariff, but I said if we had a proper tariff.

Mr. GROSVENOR. Perhaps so. But it is immaterial for the purpose I want to ask you. What is the amount of the entire product now, say for 1896, of wool in the United States, if you know?

Mr. CLARK. Well, I am not much of a statistician.

Mr. LAWRENCE. 270,000,000 pounds.

Mr. GROSVENOR. Assuming now that it is 270,000,000 pounds, how much of it do we consume?

Mr. LAWRENCE. We consume in all 630,000,000 pounds.

Mr. GROSVENOR. That would leave 350,000,000 we imported. What length of time, in your judgment, would be a satisfactory time required in order to put the country in a condition to produce that amount of wool?

Mr. CLARK. There are others here who can answer that question better than I can.

Mr. LAWRENCE. Four years.

Mr. CLARK. I am a farmer, and give my attention to the farm, chiefly, rather than to statistics.

Mr. GROSVENOR. Assuming that it will take four years, what proposition do you intend to offer between now and four years hence in regard to the supply of wool?

Mr. CLARK. I do not know that I understand your question.

Mr. GROSVENOR. Assuming that we put a tariff now that would be practically or largely prohibitory, and we required 350,000,000 pounds of imported wool in 1897, and that it would take four years to put the country in the matter of flocks in a condition to produce the wool necessary for the country's use, what do you propose for the time between now and then?

Mr. CLARK. Well, I could not make any definite answer in regard to time, but my idea about it would be that in all probability foreign wool would be imported here extensively until we had the tariff regulation, that the country would be so filled with goods, cloth, etc., we could not count on much of anything in a year perhaps.

Mr. GROSVENOR. Very well; that would be one year, and by that time would your flocks begin to increase?

Mr. CLARK. It would just depend upon the faith the growers would have in the stability of the tariff.

Mr. GROSVENOR. Well, the higher the tariff—assuming that it would become what would be called a high tariff—the less certainty of stability, would there not?

Mr. CLARK. Well, I do not know as to that; the highest tariff we ever had continued much the longest. I believe the tariff of 1867 was as high as the tariff of 1842, but I think the history will back me up in it; the tariff of 1842 was quite a high wool tariff and gave great impetus to the business for two or three years.

Mr. DOLLIVER. The tariff of 1842 appears to have been 7 cents?

Mr. CLARK. Well, I am not at all posted on what it was. I was a young man at the time, having charge of my father's flocks, and it was considered a good thing, I know; and the tariff of 1847 brought a loss and depression somewhat similar to free wool, and sheep were almost given away then for a while, and business of the country generally stopped. In our manufacturing city of Pittsburg the mills were all in full blast and many new ones were built after the tariff of 1842, as it gave good protection to iron and steel.

Mr. DOLLIVER. The tariff of 1842 appears to have been 3 cents per pound and 30 per cent ad valorem?

Mr. CLARK. Yes.

Mr. WHEELER. How do you account for the fact that in the tariff of 1846 and 1857 New England was substantially for free wool? The Maine Representatives all voted for it, I believe, except one?

Mr. CLARK. Well, I suppose that was under the influence of the

manufacturers, perhaps. I think they formerly had the impression that free wool would be a benefit. I believe most of them now think that free wool is not beneficial and they would prefer a tariff in order to have the domestic wool. That is my understanding.

Mr. WHEELER. Is it not true in manufacturing that it is absolutely necessary to have foreign wool to mix with the American wool?

Mr. CLARK. The American wool is grown just as fine as the Australian wool or any other wool. The Australian sheep were very largely imported from the United States, according to my understanding, and our country at one time produced but very little wool under 3X, as fine as any Australian wool coming in. Mr. McDowell is a better authority in regard to the amount. How much is it we used to receive? Is Mr. McDowell in the house?

Mr. TAWNEY. Are you a manufacturer?

Mr. CLARK. I am a sheep grower and farmer and live on my farm.

Mr. TAWNEY. And as likely to know as much about it as a manufacturer?

Mr. CLARK. I have lived on a farm all my life and have taken care of sheep from the time I was a boy.

Mr. WHEELER. Is it true now we do not raise the wool of the character which answers all the purposes of the manufacturer?

Mr. CLARK. I might answer in this way: The war brought about a different state of things. Our Washington County wools and Ohio and West Virginia wools, the general characteristic was a Saxony wool, which is very fine and light, making the finest quality of broadcloth and doeskins, and that kind of goods. Now, the war brought about a change there because the heavy, coarse wool would bring \$1 a pound, and it continued up through war times for some years. Then the fashion changed, and coarse goods became fashionable, and people have been asking for and obtaining an increased weight for years, ever since the war, I might say, which is thirty years or more, and the character of the wool now is of a coarser type than it was then, and yet it is as fine as a great many of the samples of Australian wool I have seen. I have never seen it in bulk, but I have seen specimens.

Mr. McMILLIN. Did not sheep husbandry decline under the tariff rate which preceded the McKinley bill? You say in your State it was not what it was twenty or twenty-five years ago under any kind of tariff?

Mr. CLARK. No, it is not; but I would say this in explanation, that Washington County, which was a very central woolgrowing point, numbered sheep by hundreds of thousands at one time——

Mr. McMILLIN. But that fell off before the tariff was reduced, did it not?

Mr. CLARK. I was going to explain that the development of oil and gas right in the center of the county and over a great deal of it caused a great deal of this decline, but it has declined since very materially, tenfold——

Mr. McMILLIN. Did it not decline outside of the oil and gas fields as well?

Mr. CLARK. I am not prepared to say it did; I am not prepared to say that. I hardly think it did except—well, there are several things to be considered. We have had a great many manufacturing plants come in along the Monongahela River, and in the eastern end of the county the sheep husbandry has passed away.

Mr. McMILLIN. Your land has become more valuable for other uses?

Mr. CLARK. No, sir; we have not any use now we can apply it to. We have too much farm produce and no market for it since the sheep have been reduced. That is what I set forth in the paper. I was going to say it is a great coal county, and the sheep industry and the mining industry do not work together. There are too many dogs, you understand.

Mr. McMILLIN. Do you think the tariff will reduce the number; that an increase of rates will reduce the number?

Mr. CLARK. Will reduce what?

Mr. McMILLIN. Reduce the number of dogs; you say there are too many dogs.

Mr. CLARK. That is only in a certain portion along the eastern border, along the Monongahela River. If we had a tariff on which we could live we would see that some dogs did not live, perhaps.

Mr. WHEELER. I will ask one question for information. On page 10, we see "manufactures composed wholly or in part of wool, worsteds, hair of the camel, alpaca, or other animals," and then it goes on to say "of a specific value not exceeding 15 cents per yard," and in 1893 there was imported 14,640,885 yards. Now in 1895 it was very much less, 1,841,000 yards. Now I would like to ask was not that deficiency made up by American manufacturers?

The CHAIRMAN. 1896 is the full year; for 1895 there are only ten months.

Mr. WHEELER. What I referred to is the cheaper goods worn by what is called the common people of the country. And let me ask this question too: Is it not true that giving free wool has gone very far to clothe the laboring people of the country at a very much less cost?

Mr. CLARK. That is a question.

Mr. TAWNEY. Are they clothed with wool or shoddy?

Mr. WHEELER. Under free wool they are clothed with wool and under high tariff they are clothed with shoddy.

Mr. CLARK. I hear laboring men in my community say it is the dearest clothing they ever bought; that it would hardly stand carrying home. It is made of hair and shoddy, with a mixture—

Mr. PAYNE. And the price seems to bear out that statement.

Mr. McMILLIN. Do you think it is more likely to be made of shoddy with free wool than with a highly taxed wool?

Mr. CLARK. With free wool there was introduced some 20,000,000 pounds of foreign shoddy, rags, and waste. The introduction of free wool increased the importation of shoddy and rags to a great extent. I think it was not often that we imported more than a million pounds.

Mr. STEELE. I think the question of the manufactures of wool comes up to-morrow, and these questions could be deferred until then.

Mr. CLARK. Gentlemen, I am very thankful for the hearing you have given me.

STATEMENT OF HON. WILLIAM LAWRENCE, OF BELLEFONTAINE,  
OHIO, PRESIDENT OF THE NATIONAL WOOLGROWERS' ASSOCIA-  
TION.

WEDNESDAY, *January 6, 1897.*

Mr. LAWRENCE said: Mr. Chairman and gentlemen of the Committee on Ways and Means, for your convenience I have prepared in written form the argument which I desire to make in support of a wool-tariff bill which will be submitted to you for your consideration. It will require more than two hours for me to read my entire argument, and at the suggestion of the chairman of the committee I have agreed to condense my remarks, or rather to give the points of my written argument and limit the time to one hour.

The CHAIRMAN. And the whole argument will be printed.

Mr. LAWRENCE. As I understand it.

Mr. TURNER. Do you desire more time?

Mr. LAWRENCE. I would like to have more time, but——

Mr. TURNER. Mr. Chairman, this is an important subject, and I would be glad if the gentleman could be given more time.

The CHAIRMAN. I will state that, by arrangement, there are quite a number of parties to be heard.

Mr. TURNER. This gentleman has been identified with this subject for a long time, and I would like for him to be heard in full.

Mr. LAWRENCE. Gentlemen, I do not assume more wisdom than other people, but for ten years I have devoted a portion of each year to the study of the subject of the wool tariff. I believe that, owing to the investigations I have made, I have something to say which will aid you in your investigation, and if, when this matter shall be printed, those of you who desire to fully investigate the subject will read what I have prepared and refer to the authorities which I have given in my argument, it will aid you very much upon every point which arises in this discussion; but I will proceed now upon the theory I am only to give the points of my argument and limit myself to one hour.

[Mr. Lawrence read extracts from his written statement, which will be found below in full.]

On behalf of the woolgrowers of the United States and by direction of the National Wool Growers' Association, I present to you the draft of a wool tariff bill, in the hope that it may meet your approval, the sanction of Congress and of the incoming President.

It is so moderate in the measure of protective benefit it will give to woolgrowers that we hope it will encounter no opposition from any portion of those engaged in the allied industry of wool manufacturing, at least not from those who on principle believe in the wisdom and justice of the general policy of a protective tariff.

In view of the result of the recent Presidential and Congressional elections, with a popular verdict in favor of the protective policy, we may even hope that those honorable gentlemen who honestly believe in free trade, or a tariff for revenue only, will lend their influence in favor of securing for woolgrowers a measure of protection equal to that which will be accorded to the most favored of other industries.

It was scarcely necessary for the newspapers to publish, as they have done, a reported interview with the honorable chairman of this committee, in which he is represented as saying:

Protection is the great purpose of the bill which will be introduced in the next Congress. Protection to American industries will be the actuating motive in framing

the bill, and that protection which is needed will be given. It matters not whether the duties necessary to give that protection be high or low; that has nothing to do with it. It is protection that we are after.

This meets the wishes of woolgrowers; "It is protection that we are after."

Intelligent men will not be alarmed at figures stating percentages of duty on the value of articles imported. The lower the world's market value of a commodity may be, the greater is the need of an enlarged measure of protection.

The bill we present comes to this committee and to Congress twice indorsed, without a dissenting vote, by the National Wool Growers' Association—once at its session, December, 1895, and then at its session, December, 1896.

It comes indorsed by that large, intelligent, and respectable body, the Farmers' National Congress of the United States, at its session at Indianapolis, November 10-13, 1896, with only two or three dissenting votes; it comes unanimously indorsed by that other intelligent, numerous, and respectable body, the Ohio State Grange of the Patrons of Husbandry, at its session in Bellefontaine, December 10-13, 1896, and it has the general sanction of the woolgrowers of the United States. These indorsements represent men of all political parties; they represent every locality in the United States.

No other industry asking protection comes to Congress with such ample indorsements; no other has behind it such voting power, such unanimity of purpose. It comes with no mere local or sectional indorsement from a selfish few, dominated by greed and disregard of the rights of others, and it hopes to find no such opposition.

#### WOOL DEALERS.

In the effort to secure a fair measure of protection, woolgrowers may hope for the aid of COMMISSION WOOL MERCHANTS who are not importers. Woolgrowers and wool merchants have interests in common; their respective pursuits are based on the same industry, and hence they should be allies.

If the time required to present the claims of woolgrowers seems long, it may be justified by the fact that sheep husbandry in its relation to the tariff, and protective benefits, is more complex, requires more research, and is more difficult to explain and be understood than any other item in the whole dutiable list.

I have spent much time in each of more than ten years in somewhat diligent study and research on the subject, and I may hope to aid you in some measure in reaching just conclusions.

With these preliminary remarks, some of the considerations will now be presented on which woolgrowers ask for the passage of this bill. Some of these will be found in Senate Document No. 17, of the present session of Congress, and especially in Chapter VII, pages 117-132.

#### I. AMERICAN WOOLGROWERS CAN SOON SUPPLY ALL NEEDED WOOLS.

1. *How much is needed.*—The people of the United States under normal conditions need for consumption annually about 9 pounds of raw wool per capita, or 630,000,000 pounds, which would require for its production about 110,000,000 sheep. (Senate Document No. 17, Fifty-fourth Congress, second session, 1896, pp. 29, 113, 153.)

2. *Capacity to produce wools.*—This country has an abundance of soils, climates, vast areas of lands adapted to pasturage, the production of hay

and other winter feed, and people skilled in sheep husbandry sufficient in numbers, to produce all wools of every variety to supply all American needs and vastly more. (Senate Document No. 17, Fifty-fourth Congress, second session, 1896, pp. 28.)

At one time there were some persons who doubted whether it would be practicable or, at least, desirable to supply all needed so-called carpet wools, but this is no longer a debatable question. With an adequate number of sheep, including those of the mutton breeds, and the coarse "common" sheep, the supply of carpet wools would be more than abundant. The belly, neck and "breech" wools of the mutton breeds—at least one-tenth of each fleece—would more than fill the place of Donskoi and other foreign so-called carpet wools, which with the coarse fleeces of abundant flocks, would leave no need of imports from any country. (Senate Document No. 17, Fifty-fourth Congress, second session, 1896, pp. 28, 29, 120.)

3. *Number of sheep.*—There are in this country now not the 110,000,000 sheep needed, but at most only 36,464,405, producing 272,674,708 pounds of raw wool, or 115,284,579 scoured pounds.—(Senate Doc. No. 17, December, 1896, p. p. 29, 103, 150, 164, 177.)

Thus the deficiency in number of sheep is 73,535,595 and in annual wool product 357,525,292 pounds.

## II. WHY WE DO NOT HAVE SUFFICIENT SHEEP.

1. *Inadequate protection.*—Why this deficiency, is an inquiry not difficult to answer.

William F. Switzler, the Democratic Chief of the Bureau of Statistics in the Treasury Department, in his Special Report on Wool and Manufactures in 1887, shows that *without an adequately protective tariff* woolgrowers in the United States can not compete with those in Australasia, Argentina, and South Africa, having the advantages of cheaper pasturage, milder climate, requiring little or no winter feeding, and cheaper labor.

Since the act of 1867 we have never had an adequate sufficient protective tariff. My friend Mr. Theodore Justice, who sits before me, has rendered great services to the wool industry, but he is now, I am sorry to say, not entirely in line with us. He has demonstrated if the act of 1867 had continued in force, long before this we would have had all the sheep required to produce all the wool needed in this country.

Mr. McMILLIN. If it will not interrupt you—

Mr. LAWRENCE. Let me suggest, would it be entirely satisfactory to let me go through and then answer any questions which may be asked?

Mr. McMILLIN. As you prefer. My only reason for it was that it had been indicated you were only to have one hour and you were going to cut your remarks, and therefore it would be impossible to give any additional time for questions.

The CHAIRMAN. There will be a time for questions.

Mr. LAWRENCE. And I will be glad to answer any questions, but I would suggest that you let me get through with my line of argument.

He says, meaning, of course, without a protective tariff:

It is idle to talk about raising sheep in Europe or this country to compete with South Africa, the Platte country, or Australasia. (Page XLVI.)

He says in these countries "laborers are at best semibarbarians or peons," and that woolgrowers there have "immense plains of cheap lands and torrid climate." And he adds that—

In Australia the plains devoted to sheep raising are in the hands of comparatively a few who have perpetual leases of immense tracts of Government lands at low rates.

The rates are even less than the taxes in some of our States. (Senate Mis. Doc. 35, Fifty-third Congress, second session, January, 1894, pp. 36, 68, 98, 246.)

### III. SHEEP IN THE WORLD.

1. *Statistics.*—Statistics show that the total numbers of sheep in the world, so far as reported, are 532,239,165, and of these there are sheep located as follows: (Senate Document No. 17, 1896, p. 161.)

|                     |               |
|---------------------|---------------|
| Australasia .....   | 121, 165, 477 |
| Africa .....        | 34, 994, 957  |
| South America ..... | 89, 360, 010  |
| Asia .....          | 59, 379, 232  |

Of South American sheep Argentina has 70,453,665 and Uruguay 12,249,787. The sheep in China are not included in any statistics, but their number is understood to be very large.

2. *Two considerations.*—There are *two* considerations in this connection very important to be kept in mind:

(1) That the deficiency of wool in the United States can be chiefly supplied either from South America, especially including Argentina, or from Australasia. We are not limited to one source of supply; we can choose either, as our interests may require.

(2) While there is a deficiency in the wool supply produced in the United States, there is an *overproduction* in the world's supply, which has reduced the world's prices so low as to require enlarged protection, especially since 1890. Thus

Messrs. Helmuth, Schwartze & Co., of London, in their March, 1896, circular, show that the world's supply of wool from 1891 to 1895 had increased from 2,121,000,000 pounds to 2,342,000,000 pounds, an increase in the world's supply in four years of 221,000,000 pounds. The effect of this enormous increase in the supply upon European markets was to depress the foreign price of wool from £13 1s. 2d. per bale in 1891, to only £11 per bale in 1895, a decline of over 18 per cent. This was in consequence of the fact that there was then 221,000,000 pounds more wool in the world than the woollen machinery of the world could consume. (Senate Document No. 17, 1895, pp. 31-51, 101; Senate Document No. 17, 1896, p. 153; Bulletin of the National Association of Wool Manufacturers, June, 1895.)

And the secretary of the National Association of Wool Manufacturers says:

The development of wool-growing in the countries of the Southern Hemisphere has been enormous. The opening up of new countries in the East by improved transportation facilities has superimposed upon this increasing production millions of pounds of raw material not formerly available. (Bulletin of the Association, September, 1896.)

### IV. HOW SOON CAN AMERICAN WOOLGROWERS SUPPLY ALL NEEDED WOOLS?

1. *In Four Years.*—Of our American sheep, it is safe to estimate that there are 20,000,000 breeding ewes. With these, it is quite certain that the increase by geometrical progression, can and, under "the most ample protection," WILL reach the number of sheep required to supply all American needs in four years from the time when such protection will be fully operative, by relief from excessive imports of wool and woollen manufactures under the free wool act of 1894.

2. *Mexican breeding ewes.*—If paragraph 15 of the woolgrowers proposed tariff bill should be agreed to, admitting free of duty for two years Mexican breeding ewes, the requisite number can be reached in less than four years. Statistics of sheep in Mexico are not attainable, but the number is large—chiefly the native Mexican carpet wool sheep.

(Senate Document No. 17, Fifty-fourth Congress, first session, December, 1895, p. 77; Senate Document No. 17, Fifty-fourth Congress, second session, December, 1896, p. 35, and see p. 114.)

#### V. AMERICAN WOOLGROWERS PRODUCE THE BEST WOOLS IN THE WORLD.

The estimate of wool consumption in the United States includes wool imported in the form of worsted and woolen manufactures. (Senate Document No. 17, Fifty-fourth Congress, second session, December, 1896, pp. 29, 113, 114, 153, 154.)

But "the most ample protection" contemplates a time soon to arrive when the allied industries of woolgrowing and wool manufacturing will supply substantially ALL needed woolen and worsted manufactures and the wool required for the purpose.

It has been shown that American woolgrowers produce THE BEST WOOLS GROWN IN THE WORLD, and as we excel in all we undertake, we will produce the coarsest and worst that can be desired by carpet manufacturers. (Senate Mis. Doc. No. 35, Fifty-third Congress, second session, pp. 149, 156, 249; U. S. Senate Mis. Doc. No. 77, Fifty-third Congress, second session, pp. 24, 64; Senate Mis. Doc. No. 124, Fifty-third Congress, second session, p. 99.)

At the exposition in Australia some years ago Ohio wools took the first premium, and Ohio and States similarly situated to-day grow wool with the best fiber in the world.

#### VI. AMERICAN WOOL MANUFACTURERS CAN MAKE ALL NEEDED MANUFACTURES AS GOOD AS ANY MADE IN EUROPE.

1. *Evidence of this.*—It is also proved that American wool manufacturers are able to make every kind of grade of woolen goods, at least just as good as are made in Europe. (Senate Mis. Doc. No. 35, Fifty-third Congress, second session, January, 1894, p. 67; Senate Mis. Doc. No. 77, Fifty-third Congress, second session, p. 24. Tariff Hearings before House Committee on Ways and Means, Fifty-third Congress, September 12, 1893, p. 984. Boston Bulletin of the National Association of Wool Manufacturers, December, 1893, p. 278; Swetzler's United States Treasury Department Wool Report, 1887, p. xxxvi; Special Report on history and condition of Sheep Husbandry of the United States Department of Agriculture, 1892, p. 240.)

And the secretary of the National Association of Wool Manufacturers says (September, 1896, Bulletin):

We have in this country enough woolen machinery to manufacture ALL the woolen goods our people can consume. But we have no use for it under the present tariff.

#### VII. EASTERN MANUFACTURERS SHOULD AID IN GIVING TO WOOL THE MOST AMPLE PROTECTION.

1. *Why.*—As population and demand increase, wool manufacturing will increase, and *with adequate wool protection* the Eastern States will retain and enlarge their manufacturing capacity so as substantially to continue them as the great American manufacturing States.

2. *Western wool manufacturing.*—*With inadequate protection for sheep husbandry, wool manufacturing will be driven into the interior of the country—driven to enable the wool industry to live—barely live, to a limited extent—for some kinds of wool, by the advantage of being near the*

*source of supply.* The mutual interests of all sections will thus be promoted by "the most ample protection for wool." Aside from the advantage to the Eastern States of retaining their manufacturing supremacy, it is a fact also that manufactures prospered most when sheep husbandry was protected most.

3. *The protective policy can not be maintained without the aid of wool-growers.*—There are other considerations which appeal to wool manufacturers, especially those in the East—political considerations—considerations of public policy—of sound political economy.

4. *Woolgrowers elected McKinley.*—It has been demonstrated that the election of William McKinley was saved by the votes of (1) Democratic farmers who favor *protection for wool*, and (2) by Republicans who would have voted for Bryan and free silver but for the fact that they deemed the promised "most ample protection for wool" more important than free silver. The protective policy can not be safe unless the free-silver woolgrowers who voted for McKinley now receive that promised "most ample protection for wool" which will place their industry upon a footing upon which it can survive. We must have the most ample protection or two years hence we will have a free-silver Congress and four years hence will have what is worse, a free-silver Congress and President, both.

5. *The gold premium and protection.*—Thus, an eminent Republican wool merchant, Theodore Justice, of Philadelphia, in a letter of November 9, 1896, forcibly and correctly said:

The woolgrowers were tempted by the proposition that Bryan's election meant a premium of 50 per cent or more upon gold, *which would be equivalent to that much tariff protection*, as the duties as well as the cost of importing wool would be payable in gold, but they never forgot that Bryan voted for the Wilson bill which destroyed one-third of this great industry and closed one-half of the American woolen mills, and thus destroyed, to this extent, the only market the American woolgrowers ever had for their wool.

On the other hand, McKinley favored not only protection for wool, but under the McKinley law the factories were running night and day; *and enough woolgrowers in these States, with free-silver leanings, voted for McKinley in their struggle for life to elect him, and his election was due to the McKinley protection which woolgrowers in those close States believe in.*

He refers to the six States carried for McKinley by meager majorities. (See Senate Document No. 17, December, 1896, chapter 3, and pp. 30, 70, 79, 85, 94, 115, 179.)

6. *Bimetallism and wool protection.*—Even free traders, who deem international bimetallism of more importance than free trade, are interested in according to woolgrowers *all the reasonably fair legislation they ask.* And those who believe protection essential to the prosperity of American industries *can not afford to put this policy in peril by any* halfway measure of protection for sheep husbandry. These are questions which rise above party politics; they are questions which command the attention and respect of statesmen and political economists.

7. *Do not drive woolgrowers away from a protective tariff.*—If woolgrowers are denied "the most ample protection," they will, I fear, be driven to inquire whether free silver, with a gold-premium protection of 50 per cent, is not more desirable than inadequate protection, which is practically but little if any better than free wool. They have already seen Mexico under free silver importing our wools into that country. (Senate Document No. 17, 1896, pp. 130, 150.)

As an advocate of "sound money"—the money of international bimetallism—I may fear results, and even *predict* the danger of their coming when I may desire to avert them.

VIII. HOW "THE MOST AMPLE PROTECTION" FOR THE ALLIED INDUSTRIES OF SHEEP HUSBANDRY AND WOOL MANUFACTURING WILL PROMOTE THE PROSPERITY OF THE WHOLE COUNTRY.

1. *Imports of wool and manufactures, 1895-96.*—The imports of wool and wool manufactures for the fiscal years 1895 and 1896 were as follows:

*Total imports of wool for twelve months ending June 30.*

| Year.     | Quantity.      | Value.         |
|-----------|----------------|----------------|
|           | <i>Pounds.</i> |                |
| 1895..... | 191, 326, 243  | \$23, 996, 224 |
| 1896..... | 230, 811, 473  | 32, 451, 242   |

Increase 39,485,230 pounds, or 20 $\frac{3}{4}$  per cent, over 1895.

*Total imports of manufactures of wool for twelve months ending June 30.*

|           |                |
|-----------|----------------|
| 1895..... | \$36, 542, 396 |
| 1896..... | 53, 494, 193   |

Increase \$16,951,797, or 46 $\frac{1}{2}$  per cent, over 1895.

These values, especially of wool manufactures, are (1) underestimates to evade the *ad valorem* duties, and (2) are, of course, below the American value. The real American value of imported wool manufactures for 1896 was all of \$70,000,000. The value of wool imports, as stated, was \$32,451,242. Here, then, are products of agriculture and of labor over \$100,000,000 in one year transferred from American woolgrowers, American manufacturers, and American industry to alien hands, while our own citizens were absolutely idle, unemployed in sufficient numbers to have furnished all American needs. And all this was lost to our own people not merely (1) by the Wilson-Gorman tariff Act of 1894, but (2) in large part by the ruinously low-wool tariff of the act of March 3, 1883, and (3) defects in the McKinley Act of October 1, 1890, for all which Republicans were responsible.

2. *All needed should be produced here.*—The aim of "the most ample protection" is, and its effect would speedily be, to give not one American dollar, either of gold or of silver, to any foreign country for any pound of wool or woollen manufactures, but to bring the era of industrial independence for all these products. Give the woolgrowers their just demands and this golden age will speedily dawn. Then woolgrowers and other farmers, and by the "interdependence of all industries," those engaged in all productive pursuits, will be able to enlarge the market for manufactured woollen and other products, and an era of prosperity will come—

To scatter plenty o'er a smiling land.

IX. REASONS PECULIAR TO SHEEP HUSBANDRY WHICH GIVE IT ESPECIAL CLAIMS TO PROTECTION.

There are some reasons applicable to sheep husbandry in favor of "the most ample protection" which do not apply to any other industry. Three of these will be named:

1. *It is the only absolutely national industry.*

It is adapted to every State and Territory, and to nearly every county in all. Every citizen must have food and clothing, and it furnishes the materials for both. (Senate Mis. Doc. No. 35, Fifty-third Congress, second session, January, 1894, pp. 7, 111.)

Its blessings reach every locality, all classes of people; they follow the tide of population and the advance of our civilization, wherever new habitations are made to share the benefactions of republican institutions.

2. It is almost the *only industry* which has been denied adequate protection when the policy of protection had the support of the executive and legislative branches of the Government.

(1) The wool tariff act of March 2, 1867, enacted with the general sanction of wool manufacturers, was ample for *conditions then existing*. Under it the prices of wool were fairly remunerative. Sheep increased from 28,477,951 in 1870, producing 100,102,387 pounds of wool, to 50,626,626 in 1884, producing 308,000,000 pounds. In four years, from January, 1880, to January, 1884, sheep increased in number 24 per cent.

2. Under it wool manufacturers prospered as never before, because prosperity for the wool industry gave a capacity to buy their products.

(2) In the midst of prosperity, the wool industry in the house of its professed friends received a cruel, unjust, unnecessary, ruinous blow in the reduced wool tariff of March 3, 1883. Under it sheep declined in number from 50,626,626 in 1884, with a wool clip of 308,000,000 pounds, to only 43,431,136 in 1891, producing 285,000,000 pounds.

(3) Then came the McKinley Act of October 1, 1890, moderately protective as it came from the hands of its author, but (1) by the introduction of the so-called "skirting clause," and (2) *ad valorem* duties on third-class wools, and in part (3) by conditions arising after its passage—the decline in the world's prices of wools—it became ineffectual to afford adequate protection. Under it wool prices went down and down until they would no longer repay the cost of production; and even in Texas, where the expenses of caring for sheep were less than in most States, sheep declined in numbers and value. (As to Texas, see Senate Document No. 17, 1895, pp. 181, 209–211; as to wool prices, see Senate Document No. 17, pp. 25, 134–142, 164, and appendix hereto.)

3. *Ruinous effects of the act of 1894.*—Then came the last, most fearful, and destructive blow ever aimed at the wool industry—the free-wool Wilson act of August 27, 1894.

The able secretary of the National Wool Manufacturers' Association has said that the number of sheep in 1893—47,223,000—

have been decreasing at the rate of 3,000,000 annually under free wool, and their number had receded on April 1, 1896, to 36,464,405, with an average value of \$1.70 a head. The loss in number is more than 10,000,000 in three years and in value over \$60,000,000. \* \* \*

The clip of the present year, according to the annual estimates of the National Association, will not exceed 270,000,000 pounds, and the average farm value *will not exceed 8 cents a pound*, reducing the total value to \$20,800,000—a loss of 60 per cent.

The average decline in the whole group [of wool prices] is 42 per cent.

*No other commodity, raw or manufactured, has suffered a decline in value which approximates this.*

The following table shows the effect of the free-wool act of August 27, 1894, resulting in a loss to flock owners of \$178,793,121, with items thus:

| Year.       | Number of sheep. | Value.        | Loss on value of sheep. | Number pounds wool. | Farm value.* | Loss on wool. |
|-------------|------------------|---------------|-------------------------|---------------------|--------------|---------------|
| 1892.....   | 44,938,365       | \$116,121,270 | .....                   | 333,018,405         | \$47,185,283 | .....         |
| 1893.....   | 47,273,553       | 125,909,264   | .....                   | 348,538,138         | 23,164,040   | \$24,021,243  |
| 1894.....   | 45,048,017       | 89,186,110    | \$36,723,154            | 325,210,712         | 22,122,528   | 25,062,755    |
| 1895.....   | 42,294,064       | 66,685,767    | 22,500,343              | 294,296,726         | 23,543,738   | 23,641,545    |
| 1896.....   | 36,464,405       | 61,989,488    | 4,696,279               | 270,474,708         | 20,800,000   | 26,385,283    |
| Total ..... | .....            | .....         | 63,919,776              | .....               | .....        | 99,110,826    |

And this only measures a *part* of the ruin inflicted on woolgrowers. (Senate Document No. 17, 1896, p. 177.)

Mr. TURNER. That is during the period of the operation of the Wilson Act alone?

Mr. LAWRENCE. Yes, sir; alone. There has never been such a cruel blow inflicted upon any industry in the American Republic from its foundation up to this time.

Mr. JOHNSON. Does that include the annual loss on the wool?

Mr. LAWRENCE. Yes; it includes all.

Mr. TAWNEY. Notwithstanding we are importing at the rate of 400,000 sheep a year?

Mr. LAWRENCE. Yes; under the low duties of the Wilson bill we are bringing from Canada mutton sheep when we ought to be growing them here. We are importing meat we ought to produce here, and when we import their sheep, we are importing hay, corn, and oats that make them. I am not discussing the wisdom of a protective tariff; I am assuming in view of the recent election that is settled.

Even President Cleveland, an advocate of free wool, was so shocked with the odious discriminations in favor of some industries and against woolgrowers by the Wilson bill of 1894 that he refused to give it the approval of his signature, and in his letter of July 2, 1894, he said of it:

It may well excite our wonder that Democrats are willing to depart from this, the most Democratic of all tariff principles, and that the inconsistent absurdity of such a proposed departure should be emphasized by the suggestion that the wool of the farmers be put on the free list and the protection of tariff taxation be placed around iron ore and coal of corporations and capitalists. How can we face the people after indulging in such outrageous discriminations and violations of principles?

From the low wool act of 1883 to 1894 sheep husbandry was discriminated against, inadequately protected, mistreated—I will not say maltreated—in the house of its professed friends, most of whom, of course, did what they honestly believed right, but erred under a misapprehension of the effect of the low duties which became law by their sanction.

And this at least should now be a *reason* for the *most careful investigation*.

And surely, in view of all these and other considerations, woolgrowers may justly ask "INDEMNITY FOR THE PAST AND SECURITY FOR THE FUTURE," and that, too, in a measure *so full* as to inspire confidence that they will be safe from the attacks of open enemies or the stabs of professed friends, even acting honestly but with erring judgment.

We can now look back and see what has been lost by inadequate protection.

4. *If the act of 1867 had been continued we would now have all needed sheep.*—It has been demonstrated that if the act of 1867 had been continued in force, with improvements to meet changed conditions, we would now have 110,000,000 sheep, producing all needed wools. (Senate Document No. 17, Dec., 1896, pp. 24, 29.)

5. *No combination possible to make extortionate prices for American wool.*—The wool industry, unlike some others, has never been, and never can be, made to extort exorbitant prices by the aid of domestic combinations or trusts. It has never been, and from its nature never can be, listed in commercial exchanges for speculation or "dealing in futures"—a species of gambling which has never added odium to sheep husbandry. (Senate Document No. 17, December, 1896, p. 140.)

6. *This may be by importers under free wool.*—With free wool and the consequent destruction of our wool industry, then foreign wools could be bought up by importers in immense quantities and made the subject

of speculation and extortionate prices. Ample wool production here will prevent that, and with flocks mostly small in numbers, scattered among a million woolgrowers, prices will always be regulated by supply and demand based on the world's prices plus the *protective benefit* of a tariff.

7. Finally, no one article of imports affords such opportunities for fraud upon a tariff law, and there is none as to which such enormous frauds have been perpetrated.

#### X. THE PUBLIC FAITH PLEDGED FOR WOOL PROTECTION.

Added to the reasons in favor of "the most ample protection" for wool is one common to this and other industries—the solemn pledge of the National Republican Convention of 1896, indorsed by the American voters in November, 1896.

The Republican national platform for 1896 says:

To all our products—to those of the mine and fields, as well as the shop and factory—to hemp, to WOOL, the product of the great industry of sheep husbandry, as well as to the finished woolens of the mills—we promise the most ample protection.

This promise is as sacred as that written in every unsullied bond ever issued by the Government of the United States. The repudiation of the promise to woolgrowers would be as dishonorable and dishonest as would be the repudiation of our national promise to pay.

#### XI. THE WISDOM OF THE PROTECTIVE POLICY FOR WOOL.

I will not discuss the wisdom of the policy of wool protection. This has been done in more than a thousand pages printed by order of the Senate in the last three years in documents, the titles of which are familiar to all: Senate Mis. Docs. Nos. 35, 77, and 124 of the second session of the Fifty-third Congress, 1894; Senate Document No. 17, 1895; Senate Document No. 17, 1896.

The policy was settled when the solemn, sacred pledge for "the most ample protection" was made.

#### XII. M'KINLEY ON WOOL PROTECTION.

I will read in this connection two sentences from the speech of William McKinley, May 7, 1890, in the House of Representatives, which did much to give him the nomination as a candidate for the Presidency:

If there is one industry which appeals with more force than another for defensive duties it is this (wool industry), and to no class of our citizens should this House more cheerfully render legislative assistance, where it can be properly done, than to the million farmers who own sheep in the United States. We can not afford as a nation to permit this industry to be longer crippled. (Speech of McKinley on the tariff, May 7, 1890, House of Representatives.)

In view of what has been said, I assume that woolgrowers will be accorded the "most ample protection."

#### XIII. WHAT IS THE MOST AMPLE PROTECTION?

We now approach the question: "What is the most ample protection for the wool industry?" It is not difficult to define. It can be given only by such *protective duties* as will secure the most ample *protective benefits*.

*Two results.*—It is that protection which will bring TWO RESULTS:

(1) Secure to American woolgrowers the most ample prices for their wools, and

(2) Whenever they are able to supply all needed for American consumption, then such duties as will exclude the import of ALL foreign wools so long as American wools command no more than the most ample prices to reward capital invested and services rendered in wool production.

#### XIV. CONSIDERATIONS IN DECIDING ON A PROPER MEASURE OF PROTECTIVE DUTIES.

In determining what is a proper rate of duty several considerations arise as to (1) *competing wools* in (2) their relation to American wools:

I. The grade or class of wools.

II. Their (1) natural condition as shorn, with (2) any added value as by "skirting." (Senate Document No. 17, December, 1896.)

III. Their shrinkage in scouring. (Senate Document No. 17, December, 1895, pp. 27, 32, 36, 40, 50, 53, 63, 64, 72, 122, 127, 129, 155.)

IV. The cost of reaching the ultimate market. (See Senate Mis. Doc. No. 35, Fifty-third Congress, second session, January, 1894, pp. 30, 66, 79, 80, 98, 214, 249, 251, 253, 271, 273, 329; Senate Document No. 17, Fifty-fourth Congress, first session, December, 1895, pp. 51-54, 70, 175.)

V. The price at the ultimate market.

VI. The farm or ranch value; that is, the price at the most convenient local market.

VII. The "protective benefit" of tariff rates as distinguished from the *nominal* rates. (See Senate Document No. 17, December, 1895, p. 52; Senate Document No. 17, December, 1896, pp. 24, 29, 108-111.)

Australasian merino, as now imported, has three advantages over the average of American merino; that is:

1. Less shrinkage, increasing its market value.

2. The "skirting," adding to its value in two respects, (1) importing only the best part of the fleece, and (2) saving the cost of sorting.

3. Cheaper freights in reaching our ultimate market.

THESE ADVANTAGES REDUCE THE "PROTECTIVE BENEFIT" OF A TARIFF.—To the extent which these advantages give Australasian merino a *greater market value* in our manufacturing cities than the average of American merino, the protective benefit of protective tariff rates are reduced.

In the matter of shrinkage, Australasian merino has an advantage over the average merino of all other countries.

These advantages and their effect on the protective benefit of tariff rates will now be considered.

And then the *results* will be given in a table, with *figures* to show how they in large measure take away the protective benefit of the nominal tariff rates.

#### THE DIFFERENCE BETWEEN "PROTECTIVE DUTIES" FOR WOOL AND "PROTECTIVE BENEFITS."

Many intelligent people—even great statesmen—who have not carefully studied the difficult and complicated questions growing out of the wool industry and protective duties applicable thereto suppose that a *tariff of 12 cents a pound on wool* necessarily means a *protective benefit to our woolgrowers of 12 cents a pound*. This would *generally* be so as to the AVERAGE OF OUR WOOLS, if a tariff bill be properly framed and guarded so as "to equalize conditions." This would be so if all

imported wools were of the same (1) grade, and (2) condition, and (3) of the same degree of shrinkage in scouring, and hence of the same intrinsic value as our wools of the same class to be protected, and (4) if all were equally accessible to the ultimate market. Thus, suppose all foreign merino fleeces to be of the same *grade, condition, and shrinkage* as the AVERAGE of our domestic merino, a duty of 12 cents a pound would give an average protective benefit of 12 cents if all could reach the ultimate market at equal cost. But in so far as the foreign merino wool of any one country is (1) of better *grade*, (2) *condition*, or (3) *lighter shrinkage* than the AVERAGE of our domestic merino, and will consequently demand in our markets more price per pound than the average of our merino, the EXCESS of price will be so much subtracted from the *nominal tariff*, and will leave a "*protective benefit*" of only the tariff rate *less* the enhanced higher value per pound in our markets of the foreign wool.

Thus if the duty on merino wools be 12 cents per pound, and if the choicest varieties of similar wools imported will command in our markets 5 cents per pound more than the AVERAGE of our merino, the PROTECTIVE BENEFIT to our woolgrowers will only be 7 cents per pound.

While the Australasian merino wool fiber is not equal in strength with that of the American merino fiber produced east of the Mississippi River, yet it is equally salable, and is of so much lighter shrinkage in scouring that in its UNWASHED condition, as heretofore imported, it will command in our markets from 5 to 7 cents per pound more than our average WASHED merino, and hence as against such Australasian merino a tariff of 12 cents will give the American woolgrower a protective benefit of only from 5 to 7 cents per pound.

I repeat, Australian merino unwashed, as heretofore imported, will sell from 5 to 7 cents a pound more than our Ohio washed merino, because of the less shrinkage of the foreign wool and because of the value which is added to it in the skirting, and because of the special demand of a soft wool of that particular luster, which, however, adds nothing to its utility, but, nevertheless, subtracts from the protective benefit of the wool tariff, leaving the protective benefit of a tariff of 12 cents at less than 7 cents in competition with skirted Australian unwashed merino. Manger & Avery, prominent wool importers of this country, have demonstrated that a tariff of 11 cents a pound, under the McKinley act, which was intended to give 11 cents benefit to the price of our woolgrowers on unwashed wool, and 22 cents on washed, and 33 cents on scoured, in its practical operation only gave the Ohio and similar wools—and when I say Ohio I mean Pennsylvania and all that country east of the Mississippi River—it only gave a protective benefit of 6 cents a pound on washed wool. That wool is the wool which injures the merino woolgrowers most. I have cited here eleven authorities of what I say.

Mr. TURNER. What are the character of those authorities—just indicate them?

Mr. LAWRENCE. I will do so.

The evidence of this is abundant:

1. Senate Document No. 17, Dec., 1896, William H. B. Thornton, pages 66, 72.
2. Senate Document No. 17, Theodore Justice, pages 33, 63.
3. Senate Document No. 17, Manger & Avery, pages 63, 64.
4. The Boston Wool and Cotton Reporter, same document, page 41.
5. Wool Circular, Justice, Bateman & Co., page 41.
6. Governor Rich, of Michigan, page 41.
7. And see pages 40, 41, 42, 63, 64, 66, 71, 72, 123, 126; Senate Document No. 17, 1895, INTRODUCTION II, and pages 48, 54.

8 Senate Document No. 35, Fifty-third Congress, second session, January, 1894, page 322.

9. Evidence of the secretary of the National Association of Wool Manufacturers, Senate Document No. 17, December, 1895, page 54.

10. The evidence of the market quotations of wools.

Thus the Boston Commercial Bulletin of December 26, 1896, gives Boston prices as follows:

## DOMESTIC WOOLS.

| Ohio and Pennsylvania:                             | Cents.                             | California (scoured basis)—Continued. | Cents. |

Ohio and Pennsylvania X WASHED merino is quoted 18 cents, which is about the AVERAGE of all American merino. But Port Phillip (Australasian) UNWASHED merino, which is the standard of comparison for competing with Ohio and Pennsylvania washed, is quoted 20 and 24.

This is under *free wool*, when there is no motive to import the cheapest Australasian; but under a protective tariff only the *lightest* and *best* would be imported; so that it is manifest that Australasian UNWASHED merino would command in our markets as now imported ALL of 6 cents per pound more than Ohio and Pennsylvania WASHED, and all of 8 cents per pound more than Texas and other merino west of the Mississippi River.

Thus the "protective benefits" of tariff would be reduced by just these amounts *as against competing Australasian* wools.

11. Another evidence is found in the special consular report on Australasian sheep and wool to the State Department in 1892, hereafter quoted.

THE LIGHT SHRINKAGE A PECULIARITY OF AUSTRALASIAN MERINO—  
INJUSTICE TO ARGENTINA.

This *light shrinkage* of Australasian merino is peculiar to *that wool*—unlike the average merino of any other country, certainly unlike the Argentine merino.

The tariff act of 1883, with a duty of only 10 cents per pound on unwashed merino, effectually excluded South American wools under conditions existing in 1888 and since that. (Senate Mis. Doc. No. 35, Fifty-third Congress, second session, p. 285.)

Now, the effect of this peculiarity in the Australian merino—that is, it has less shrinkage than any other merino wool in the world—was that under the Wilson bill we imported last year 71,000,000 pounds of this Australian wool, and only 14,000,000 pounds were imported from South America. It was because the South American wool, like the Ohio wool and all our American wools, will shrink sixty-six and two-thirds per cent in the scouring. The result is by letting in this Australian wool unwashed, shrinking less than the American washed, that amount of merino shuts out substantially all merino wools from other countries. Here is what our American consul at Buenos Ayres said.

The American consul at Buenos Ayres, in his report to the State Department of December 13, 1888, says:

"The shipments of wools to the United States were exclusively of the long carpet wools from Cordova, it being the only class that it is possible to send to our (United States) market, under our tariff, at a profit. Our tariff, so far as the clothing (merino) and finer qualities are concerned, is prohibitive. While those from Australia can come in, those from the Argentine Republic, owing to the greater amount of grease and dirt which they contain, are quite excluded. The amount of dirt and grease in the (unwashed) wools of the Argentine Republic reaches to more than 70 per cent, while the (unwashed) wools of Australia and New Zealand only have about 50 per cent. In other words, while the average yield of Argentine wools scoured is only 30 per cent, that of the other countries named is 50 per cent."

As between the South American wools and the Australian, the McKinley Act of October 1, 1890, excluded those from Argentina.

The result of that is we have shut out from our markets South American wool when our interest is to try and secure reciprocal treaties with South America which we can not hope for in Australia.

Mr. GROSVENOR. To interrupt you right there, what produces that condition?

Mr. LAWRENCE. It is the climate. Australasia has a dry climate, and the sheep are changed in their condition by climate very much. The native Mexican sheep, that produce wool almost as coarse as dog's hair, and which will only produce about a pound and a half of wool, are sheep which are descended from the Spanish merino brought into that country by Columbus and——

Mr. GROSVENOR. They are greasy from living among greasers?

Mr. LAWRENCE. The Australian sheep are American sheep; but the effect of the climate is to produce a light, soft, lustrous wool that will not shrink as much unwashed in scouring as our American merino will when washed. It is climatic, but it is disastrous to us.

Mr. JOHNSON. Is it not also a fact there is an entirely different method in putting up the wool in Australia than in South America in the matter of skirting?

Mr. LAWRENCE. Yes, sir; there is a different method of putting up the two; but you take the naked fleece unwashed and it will shrink less than our Ohio washed put up in the same manner.

The secretary of the National Association of Wool Manufacturers, in an article January, 1895, published in the bulletin of the association for June of that year, said:

The wools grown in these sections of the far West [in the United States] being of *heavy shrinkage* have never until now [under free wool] encountered foreign competition, because under the specific tariff wools shrinking over 60 per cent could not be imported.

In the fiscal year 1892 our imports of Argentina merino were only 262,380 pounds, but from Australasia were 15,296,946 pounds, and even under free wool in the fiscal year 1896 the imports of wools from Australasia were 71,627,131 pounds, and from Argentina only 15,523,911. (Senate Document No. 17, December, 1896, page 155.)

#### THE SHRINKAGE OF WOOLS IN SCOURING.

MERINO.—It has been shown that Australasian merino UNWASHED shrinks only 50 per cent, while Argentina shrinks 70. Pennsylvania, Ohio, and similar *unwashed* merino shrinks 66 per cent, and wools west of the Mississippi from 66 to 70 per cent, and occasionally even more. (Senate Document No. 17, December, 1895, pp. 9, 48-54, 145; Senate Document No. 17, December, 1896, pp. 147, 149.)

The shrinkage as given in the statistical abstracts of the United States do not represent the entire shrinkage:

1. Because the percentages are applied to the entire wools of each State, the merino with its heavy shrinkage, and the wools of the mutton breeds with their lighter shrinkage; and

2. They include wools as marketed "washed and unwashed," and in the States east of the Mississippi a considerable portion is marketed, being first washed on the sheep's back. (Senate Document No. 17, Dec., 1896, pp. 147-150.)

It may be said in general terms that the unwashed merino wools of the world—by far the largest part of all produced—will shrink 66 per cent in scouring, while Australasian unwashed, unskirted, will shrink only 50 per cent or less.

In other words, it requires generally 3 pounds of unwashed merino to make 1 scoured pound.

If this Australian merino wool be imported UNSKIRTED it will still shrink only about 50 per cent.

It follows from what has been said that the quotations of prices give unwashed at only one-third of the price of scoured. (Senate Document No. 17, December, 1896, pp. 134-136.)

And hence it is, also, that the tariff acts of 1867, 1883, and 1890 all impose a single duty on unwashed, double on washed, and treble on scoured.

#### SHRINKAGE OF THE WOOLS OF THE MUTTON BREEDS.

The wools of the mutton breeds, unwashed, shrink in scouring only about 30 per cent, especially such as will be imported under a tariff. (Senate Document No. 17, December, 1895, p. 50.)

CARPET WOOLS—improperly so called—unwashed, yield from 60 to 70 per cent of scoured, especially the light, open classes which will be imported under a protective tariff. (Senate Document No. 17, December, 1895, p. 50.)

Ohio and similar WASHED merino wools shrink in scouring about 55 per cent on an average.

#### XV. INJUSTICE AND IMPOLICY OF GIVING AUSTRALASIAN MERINO AN ADVANTAGE OVER THAT OF SOUTH AMERICA.

The enormous *injustice* of giving Australasian merino the almost *exclusive* privilege of supplying our imports of merino wool is only equaled by its *want of sound American policy*.

These are considerations deserving attention in framing a wool-tariff bill. (Senate Document No. 17 (1896), pp. 33, 40, 72, 122, 127; Senate Document No. 17 (December, 1895), p. 58.)

We can not hope to export much of our products to Australasia, a British dependency. When we will in the future buy Australasian wool it must be paid for chiefly in American gold. Australia will only buy from us what she can not buy in England, and she will buy from us all such articles as she can not buy in England whether we buy her wool or not. But we can enlarge our trade with South America, and especially with Argentina.

In the fiscal year 1896 our trade with South America was as follows:

|              |                 |
|--------------|-----------------|
| Imports..... | \$108, 873, 240 |
| Exports..... | 36, 296, 984    |

Of these the trade with Argentina was—

|              |               |
|--------------|---------------|
| Imports..... | \$4, 456, 163 |
| Exports..... | 5, 979, 047   |

An eminent statesman, Hon. Warner Miller, said in November, 1894:

Mexico, the West Indies, and Central and South America have a population of nearly 70,000,000 and a trade of over \$1,000,000,000. Nature has made possible the most profitable trade between North and South America. The raw products of the two hemispheres are dissimilar, North America producing materials belonging to the temperate zone, while Mexico, Central and South America, and the West Indies produce everything found in the Tropics. Exchange between such countries is a necessity for both. Manufactures thrive only in the northern latitudes; nature seems to have set the limits on the development of the great industries and confined them to the temperate zone. We require of our southern neighbors all their raw products, such as sugar, coffee, hides, hemp, dyewoods, mahogany, etc. They need many of our food products and all our manufactures. Why should we not control this vast trade, both to their and our profit? (Senate Document No. 17 (December, 1895), p. 58; Senate Document No. 17 (December, 1896), p. 127.)

Yet we have permitted Great Britain to monopolize the great bulk of South American trade, because we bought wool of Australasia, and

refused to make our wool tariff command the South American wool. We may soon hope for commercial treaties—reciprocity treaties—which will change all this, but we can not do so unless we make our wool tariff in a form to buy South American wool and refuse to buy Australasian. It will be good policy to transfer our wool purchases in large parts from Australasia to South America.

#### FREE WOOL TO MANUFACTURE GOODS FOR EXPORT.

Our policy has been under tariff legislation to permit even wool to be imported free for the purpose of manufacturing goods for export. It was so in the McKinley Act of 1890. Woolgrowers ask only for the home market for manufactures required by our own people. Our wool manufacturers should now unite with woolgrowers in securing South American trade.

#### WHY AUSTRALIAN UNWASHED MERINO SHOULD BE CLASSED IN A TARIFF LAW AS WASHED.

I come now to the tariff bill which we have prepared to present to this committee for their approval. The new wool tariff bill asks for the woolgrowers that the Australian unwashed merino by reason of its light shrinkage shall be deemed as washed. The object of that is simply to put it on an equal footing with our wools and the wools of the rest of the world.

The CHAIRMAN. Is that 24 cents duty you ask to be put on Australian wool?

Mr. LAWRENCE. We ask 12 cents duty on all merino wools, estimating that they will shrink 66 per cent in scouring, and in order to place Australian wool upon an equal footing with South American, we ask that that wool shall be deemed as washed wool. That would make it 24 cents per pound duty on Australian wool; but I wish to call attention to one thing.

The McKinley Act placed 11 cents on unwashed merino, 22 cents per pound on all washed, including, of course, South American wool, which will shrink more than Australian unwashed wool, and is of less value than the Australian. The act of 1883 placed 10 cents a pound on unwashed merino and 20 cents a pound on washed, including South American wool, which is inferior to Australian, so that although the duty we ask is 24 cents on Australian, yet it is then even in better condition to secure our market than wools of South America and all other countries of the world.

#### THE "SKIRTING CLAUSE" IN THE ACT OF 1890.

Another object; we drop out of our bill the "skirting clause." There is a gentleman who will speak to you upon skirting as depriving our citizens of the privilege of sorting. We ask it because it takes away the benefit of the protective tariff. Skirting as now practiced consists in taking off of the fleece, not merely the belly and breech wool as originally, but in order to let in Australian wool and defeat the protective benefit of our tariff, the skirting is carried on to such an extent that the imported part of the fleece only includes about half a fleece. Consul-General Wallace, consul-general at Melbourne, in his report made a diagram of the skirting process, and that is the little part that is imported (see illustration). Now the effect of that is to add to the value of the imported part because (1) it saves the cost of sorting, (2) it leaves for import to us the best, lightest, and most valuable part of the fleece.

## XVI. THE WOOLGROWERS' TARIFF BILL ON LIGHT SHRINKAGE OF WOOLS IN SCOURING.

1. *The woolgrowers' bill on shrinkage of merino.*—In view of these considerations, the wool tariff bill asked for by the woolgrowers provides:

Sixth. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing—that is, in their natural condition. Washed wools shall be considered such as have been washed with cold water on the sheep's back, and *Australasian wools, and wools of similar light shrinkage in scouring, having any admixture of merino blood, as shorn from the sheep's back without washing, shall be deemed washed wool.* Wool washed or cleansed in any other manner than on the sheep's back, as aforesaid, shall be considered as scoured wool.

And all wools having less than twelve per centum of grease, yolk, dirt, or other foreign matter shall be deemed scoured, and wools having any admixture of merino blood, immediate or remote, and having less than 60 per centum of grease, yolk, dirt, or other foreign matter, shall be deemed washed, and all other wools having less than 25 per centum of grease, yolk, dirt, or other foreign matter shall be deemed washed. (Senate Document No 17, December, 1896, pp. 122, 127, 184.)

The wool tariff act of 1883 imposed 20 cents per pound, and the McKinley Act of 1890 IMPOSED 22 CENTS PER POUND ON ARGENTINE AND CAPE AND OTHER WASHED MERINO WOOLS OF LESS VALUE. Why should not Australasian UNWASHED merino, shrinking less than Argentine WASHED, be required to pay as much duty as the latter? Why permit Australasia to have an unfair advantage over our sister republics on this continent?

2. *Shrinkage of other wools.*—The provision requiring “wools having less than 25 per cent of grease” to be deemed washed is justified fully, because—

(1) As the *lightest* wools will be imported, 1 pound of such will yield as much clean wool as 2 pounds of average merino, with which it competes and which it supplants.

(2) This is necessary to encourage the raising of American mutton sheep to give cheaper meat food, especially to our great manufacturing cities. This is for *the benefit of manufacturers.*

3. This is necessary to encourage the raising in Texas and elsewhere of the native Mexican carpet wool sheep; also to give (1) cheap coarse wool and cheap good mutton, all in the interest of manufacturers. This provision is necessary to avoid a discrimination against merino wools. All should be on an equal footing.

## XVII. WHAT IS WOOL SORTING?—ITS COST.

In order to understand the full effect of “skirting” in reducing the protective benefit of a tariff, it must be understood that each fleece contains about six or more varieties of wool, each adapted to the manufacture of a different class of goods. These varieties are separated or “sorted” by wool sorters of a high degree of skill. This sorting is an expensive process. Theodore Justice, in a letter December 2, 1896, said:

The charge for sorting and scouring Ohio merino wool is 1 cent per pound in the grease, adding 2 cents per scoured pound; cost on wool shrinking, 50 per cent, and more than this on territory wools [the whole Rocky Mountain region], which shrink more. (And see Senate Document No. 17, December, 1896, pp. 41, 42, 129.)

## XVIII. THE “SKIRTING CLAUSE” IN THE TARIFF ACT AN ADVANTAGE TO FOREIGN WOOLS OVER AMERICAN.

*The advantages stated.*—The tariff act of October 1, 1890, contained a provision that—

383. The duty upon wool of the sheep or hair of the camel, goat, llama, alpaca, and other like animals, which shall be imported in any other than ordinary condition,

or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would otherwise be subject: *Provided, That skirted wools as now imported are hereby excepted.*

This latter proviso is known as the "skirting clause," finally incorporated in the bill against the wishes of woolgrowers.

Skirting as practiced to evade the duty consists in cutting out of the center of the fleece the choicest, lightest, most valuable part, equal to about one-half the fleece. Hon. George H. Wallace, United States consul-general to Melbourne, in his special consular report to the State Department on Australasian sheep and wool, August 5, 1892, gives a diagram of the Australasia fleece showing the extent of the skirting, as follows:

*An Australian sorted fleece.*

*a* Third pieces.  
*b* Second pieces.  
*c* First pieces (necks and skirts).  
*d* Stained pieces.

*e* Bellies  
*f* Broken fleece.  
*H* Fleece.

And he says, page 24:

The greatest factor in determining the value per pound of a fleece of wool is the per cent of shrinkage or loss it will sustain in being scoured, and it was found the larger part of this loss was sustained from the extremities or rim of the fleece; so the skirting, which originally consisted in removing *only the stained portions*, was ENLARGED

and a portion was removed from the legs and a strip around the whole outside of the fleece, which was called "pieces."

There was also another reason for this *increased* skirting in the trefoil bur, which was introduced from South America. This spread over many of the runs, and being a low-growing plant, became attached to the fleece when the sheep lay down. The presence of this bur decreased the value of the wool in which it was found 2d. (4 cents) per pound, and the practice grew into always removing burry portions. As this practice was extended to a greater or less degree, there was obtained a third "sort" of wool for market. But the spirit of rivalry among both breeders and woolgrowers brought about a still greater amount of "skirting," and the neck being slightly coarser wool was torn from the fleece and added to the pieces. The odds and ends and sweepings were sacked separately and called "locks." The custom of the Melbourne market in 1860 was to put up the entire clip from any one station and sell as one lot, including all fleeces, lambs, pieces, and locks. The price at which it sold was so much per pound for the fleeces and lambs' wool, two-thirds of such price for the pieces, and one-half of the same for the locks.

All wool at this time was washed on the sheep's back. To-day at shearing the sorter is often a highly paid man, who has been educated in a mill in England, is an adept in (1) classifying, (2) sorting, and (3) judging wool. His skill is such that the fleece after passing through his hands, is, as stated in the *Manufacturer*, published in Philadelphia, January 2, 1892:

"so well *skirted* on the station as to need NO SORTING at the mill, and the shrinkage is reduced from 48 to 52 per cent."

\* \* \* In the market of Melbourne it has been the rule of buyers for the American mills to refuse all wools which show a shrinkage of much, if any, over 52 per cent, and this action has no doubt had much to do with continuing and even increasing the amount of skirting and sorting done.

It is quite manifest that the general average of imported unwashed and unskirted Australasian merino will shrink in scouring only about 50 per cent, and especially as the lightest shrinkage wools would be imported under the tariff.

Mr. Wallace, in his article of the January, 1897, number of the *Quarterly Bulletin of the National Wool Growers' Association*, page 18, says:

It has been asserted, and never contradicted, that unwashed Australian wool has been imported so manipulated in the processes of skirting and sorting, or, as our law expressed it, "skirted wool as now and heretofore practiced," as to be clean enough to go on the cards without any washing—wool without any shrinkage. It is true that such wool would sell for more than the average price, but it is the average price we must consider as the competitor.

Mr. EVANS. Do you know whether this process of clipping is part of work done at the shearing of the sheep, or done later?

Mr. LAWRENCE. No, sir; it is done by skilled men afterwards—done by expert men of a high degree of intelligence—because it requires a first-class judge to know what to cut off and what to leave. Every fleece of wool has from six to eight varieties, and "sorting" consists in separating the different kinds of wool of each fleece, and each part is used for the production of a different class of goods.

Mr. TURNER. You mean it is that many different kinds of texture, not simply the condition?

Mr. LAWRENCE. Yes, sir; the texture. Manufacturers do not take a whole fleece of wool and weave it into a piece of cloth. It is divided into six or eight different kinds, and each kind makes a different kind of goods, and sorting is necessary to secure this result. This skirting process is practically sorting. I want the American sorters to have a share of this business.

#### THREE RESULTS OF SKIRTING.

Thus the process of skirting has three results:

(1) It adds to the value of the imported wool by securing the most valuable part of the fleece.

(2) It saves the cost of sorting.

(3) It adds to its value by removing burrs, and thus gives it an advantage over South American wools and our American wools.

(4) It has another advantage over other merino. Fashion has made a demand for wools of a soft, lustrous fiber, which is supplied by Australasian merino, adding to its *selling* price but not its utility or intrinsic value.

The added value to each pound of the imported part, with the fashion demand for *this* kind of wool, without reference to the added value by reduced shrinkage, will evidently be from 2 to 4 cents per pound, and just to this extent in competition with American merino of the same shrinkage it *reduces the protective benefit* of a tariff. And this reduction applies to all the merino wools of the world. If *fashion* requires a form of goods merely for the peculiarity of its style and not for its real utility, and which demands foreign rather than American wool—a mere luxury—political economy requires that those who indulge in it should pay a luxurious tariff for the privilege. But our woolgrowers' bill is so moderate in its demands that it asks no increase of tariff by reason of the fashion luxury, but only such tariff as is absolutely necessary to give fair protection to our American wool industry.

#### XIX. THE SKIRTING IN PART DEFEATS THE PROTECTIVE PURPOSE OF OUR WOOL TARIFF ACTS.

It is quite evident that the effect of the skirting clause was not fully understood by the Congress which enacted the wool tariff of 1890.

1. *The law is stated.*—The McKinley Act of October 1, 1890, was INTENDED to give a PROTECTIVE benefit of 11 cents per pound on the greasy [unwashed] merino wools of the United States. This is readily proven:

The acts of 1867, of 1883, and of 1890 are all substantially in the *same form* as to merino wools—clothing or class 1 wools—except as to the *amount* of the duty. The *intention*, then, is to be gathered from the act of 1867.

1. *Its intention* was to give a protective benefit of the full amount of the duty specified on unwashed merino, *double* on washed, *treble* on scoured.

At *that* time American woolgrowing was chiefly east of the Missouri River. (Senate Mis. Doc. No. 124, second session Fifty-third Congress, p. 107.) The general shrinkage of *all* our merino wools was an average of 66 $\frac{2}{3}$  per cent in scouring. (See Senate Doc. No. 17, Fifty-fourth Congress, first session, December, 1895, p. 50, and pp. 9, 54.)

The *light shrinkage* of Australian merino was then almost unknown in our markets. The total wool product in Australia in 1870 was only 179,459,780 pounds, chiefly used in European factories. (Senate Doc. No. 124, p. 53.) The process of "skirting" wool for export was then unknown.

It was in view of *these conditions* that the act of 1867 was passed. Its *purpose* was carried into the acts of 1883 and 1890, but the unfortunate "skirting clause," for the first time found in the act of 1890, largely defeated that purpose.

2. As to the merino wools of the world generally, and especially the unskirted South American merino, shrinking 66 $\frac{2}{3}$  per cent in scouring, the nominal duty of 11 cents per pound in the act of 1890 on unwashed merino was the *real protective duty* in practical operation. This is proved by evidence of the American consul at Buenos Ayres, etc., found in

Senate Document No. 17, Fifty-fourth Congress, first session, December, 1895, pages 54 and 59.

It is thus certain that the REAL INTENTION of Congress in the act of 1890 was defeated in its protective benefit by (1) "loop holes," the effect of which was not understood, and (2) by the light shrinkage of Australian wools, not then understood by Congress.

2. *The remedy by the woolgrowers' bill.*—In view of all these considerations the wool tariff bill now asked for, proposes to *omit* the skirting clause, and contains a provision as follows:

Seventh. The duty upon wool of the sheep or hair of the camel, goat, llama, alpaca, and other like animals, which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which has been skirted, sorted, or otherwise increased in value by the rejection of any part of the original fleece or otherwise, shall be twice the duty to which it would be otherwise subject.

If any bale or package of wool or hair specified in this act, imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool or hair of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

This is substantially in the form of the act of 1890, (1) omitting the skirting clause, and (2) omitting the clause relating to wool "reduced in value by the admixture of dirt or any other foreign substance," which was inserted in view of *ad valorem* duties.

3. *Misleading legislation.*—Unless (1) the "skirting clause" be omitted and (2) Australasian merino be deemed washed a statutory promise of a duty of 12 cents per pound for the benefit of American woolgrowers, as generally understood, with a protective benefit of that rate, is misleading and deceptive. It will be a legislative misrepresentation.

#### XX. ANOTHER REASON FOR OMITTING THE SKIRTING CLAUSE—GIVE EMPLOYMENT TO AMERICAN WOOL SORTERS.

1. *Two objects of a protective tariff.*—A protective tariff has two great objects—(1) to secure employment for labor and (2) fair wages.

2. *Foreign skirting transfers these advantages to foreigners.*—It may be assumed that the scouring and sorting of wool is worth 1 cent per pound. (Senate Doc. No. 17, December, 1896, pp. 40–42, 129, 155.) The wool imports from Australasia alone in the fiscal year 1896 were 71,627,131 pounds, which would give for sorting and scouring to American labor \$716,271.

Under a tariff law with a skirting clause more than a million dollars annually would be paid, chiefly in American gold, to alien hands, all of which should go to American wage earners. This would give employment to 2,500 American citizens, with wages \$400 annually to each for the service; and in the near future, with our wool industry fully developed, the number of wool sorters required would reach more than 5,000, with wages more than \$2,000,000 annually, and representing a population of 25,000 in numbers. The "sorting" alone of wool will cost an average of about 75 cents per 100 pounds. As American citizens the interests of wool sorters should be heeded, and in doing so Congress will benefit other industrial producers needing employment.

3. *A Philadelphia wool sorter*.—And here a Philadelphia wool sorter—Mr. John Ridgeway—comes to our relief, in a communication to the Philadelphia Ledger, who says:

Judge Lawrence is justified in objecting to the skirting clause.

He adds:

How does this skirted wool affect the workingman who is a wool sorter? In this wise: Before skirted Australian was known I was paid \$1 per 100 pounds for sorting Australian fleece. I have known men refuse and leave a shop rather than sort it for 90 cents, and yet in this same wool room during this Administration I have seen a laborer and boy, whose combined pay was \$2.08 per day, put down to the wool washer from five to seven thousand pounds of this skirted wool in a day. This same wool is used by many manufacturers as a sorted wool. It takes the place of sorted wool. Therefore, if the manufacturers want their wool sorted in Australia I think in justice to the wool sorters, who are far more numerous than manufacturers and dealers combined, that they ought to be willing to pay for it in the shape of extra duty on skirted Australian. (Senate Document No. 17, December, 1896, pp. 40, 42, 129, 155.)

American wage earners have some rights that Congress will respect, and it is hoped that wool manufacturers will also respect.

4. *Statesmanship on this subject*.—Under existing conditions—the Wilson tariff act—a mighty host of American citizens, anxious to earn their bread by honest toil, are idle and unemployed. With our ever-increasing urban population and numbers of wage earners, the Government can not afford to take from any of them the means of employment. Monarchies employ standing armies for the double purpose of (1) removing discontent from the unemployed and (2) of suppressing disorder and violence from those who receive meager and inadequate wages.

The policy of a republic is to secure employment for all with just compensation, thus to enlarge the capacity for creating wealth and removing all cause for disorder or violence. This policy is now invoked in favor of the wool sorters of the United States.

#### XXI. NO DIFFICULTY IN PROCURING WOOL IMPORTS WITH THE SORTING CLAUSE OMITTED.

There will be no difficulty in securing all needed wool imports. As skirting was invented to be a fraud on the wool tariff, so wool seeking our market will be made to meet the conditions imposed by our laws, whatever they may be. Nearly all the South American wools are imported unskirted, and until recently all were. Skirted wool can come by paying the requisite duty.

The conclusion seems to be that the skirting clause has (1) defeated the real protective purpose of the law, (2) that it has robbed the Treasury of millions, and (3) has robbed American wool sorters of employment and wages, and (4) deserves to be—no more forever.

#### COMPENSATORY DUTIES.

It has been objected that if Australasian unwashed merino be deemed washed it will unjustly enlarge the compensatory duty for woollen manufactures.

The answer is: The compensatory duty will be just what the law makes it. The law can give compensatory duty only on the basis of unwashed merino. The inquiry may well be made whether possibly some other compensatory duties should not be on this basis. (See Senate Document No. 17, December, 1896, p. 55.)

XXII. THE COST OF REACHING THE ULTIMATE WOOL MARKET—  
FREIGHT CHARGES—PROFITS OF LOCAL WOOL BUYERS AND COM-  
MISSION MERCHANTS.

In fixing a rate of wool tariff so as to give "the most ample protection" to our American woolgrowers in their competition with foreign woolgrowers, THE COST of reaching the ultimate wool market is to be considered.

It is evident that if the cost of shipping wool from Melbourne or London to Boston be less than 1 cent per pound, and the cost of shipping wool from Texas, Colorado, and Montana be 3 cents per pound, the Melbourne or London vendor will have an advantage of 2 cents per pound over the woolgrower of Texas, Colorado, and Montana, and this will reduce the protective benefit of the nominal tariff rates just 2 cents per pound. The tariff rate should be high enough to meet this difference and still afford the American woolgrower a farm or ranch price sufficient to pay the fair cost of producing wool and a margin of profit besides.

This subject has been discussed, and freight charges given in Senate Document No. 17, December, 1895, pages 50-54, 70; Senate Document No. 35, Fifty-third Congress, second session, January, 1894, pages 30, 66, 98, 206, 249-253, 271-273, 329.

The secretary of the National Association of Wool Manufacturers, referring to freight charges on wools from our far West States, said in the bulletin of the association for June, 1895:

Another element in the case, the effect of which must shortly become distinctly traceable, is the matter of *freight rates from these far Western States*. From London freight rates are one-third of a cent per pound; from the Western plains it cost from two and a half to three cents a pound to bring wool to Boston, and this difference is practically so much against the Western sheep grower as against the prevailing prices in the London market. (Senate Document No. 17, December, 1895, p. 50.)

The freight from London is on wool comparatively clean—that from the far Western States on *wool and grease*, the latter in large proportion. (See Senate Mis. Doc. No. 35, Fifty-third Congress, second session, January, 1894, p. 272. Senator Warren.)

And referring to woolgrowing in Australia, the article from the bulletin of the Wool Manufacturers' Association proceeds:

The best evidence attainable justifies the statement that *even at present prices* woolgrowing can still be carried on at a profit in that country [Australasia]; and if this is so it seems certain that the Australian supply will continue to increase, not so rapidly as in the past, but fast enough to keep abreast with any increase in the demand.

It is abundantly shown that wool can be shipped from Melbourne to Boston, including commissions, profits, insurance, and all charges, for 1½ cents per pound, in fact for less than this.

The freight charges from Ohio and similar locations is not so great as from Texas, but it costs about 3 cents per pound to meet freights to Boston or Philadelphia, local wool buyers' profits, commissions of Eastern dealers, insurance, etc. This is shown in the difference between the *farm or ranch value* and the Boston price. (Senate Document No. 17, December, 1896, pp. 108-111, 134-136.)

Canada is one of our great rivals, separated from the great New York market by a river with freights merely nominal.

Mr. DOLLIVER. Do you know the Boston price of this Australian wool now?

Mr. LAWRENCE. I have it here in these figures, but I can not give it just now.

A VOICE. Twenty cents.

Mr. LAWRENCE. No, sir; it will not reach 20 cents now. Besides that, this (1) skirted, and (2) light-skrinking wool will command in our market 5 cents or more per pound more than our wool, and that is on the basis of our washed wools. That is what we are competing with. We have to compete with Australian wool, which can be, and under a tariff probably would be, put on board ship at Melbourne at 9 cents a pound whole fleece.

Mr. STEELE. And worth twice as much as our wool in that condition?

Mr. LAWRENCE. Worth intrinsically no more than Ohio merino, but commanding more price for reasons stated.

Mr. WHEELER. This is the 9-cent wool that you propose to put the 24 cents duty on?

Mr. LAWRENCE. That is the wool we are competing with.

Mr. WHEELER. And you ask a 24 cents per pound duty?

Mr. LAWRENCE. We ask 12 cents a pound duty on unwashed, double on washed, and triple on scoured; and inasmuch as the Australian merino as now imported unwashed is better than any other washed wool in the world, it should be classed as washed wool.

Mr. WHEELER. Therefore the 9-cent wool would be classed as the wool upon which you would impose a duty of 24 cents?

Mr. LAWRENCE. We want a duty of 24 cents on unwashed Australian merino wool, as now imported, which is better than any other washed wool in the world. We simply put it upon an equality with other wools.

Mr. JUSTICE. You said 9 cents; you mean 9 pence?

Mr. LAWRENCE. No, sir; I mean 9 cents.

Mr. TAWNEY. You mean skirted wool?

Mr. LAWRENCE. The whole fleece. Here is the testimony of Consul-General Wallace: "Or in United States currency 9 cents per pound for the fleece on the wharves of either Sydney or Melbourne." That is what we have to compete with, Australian wools, whole fleece, at 9 cents a pound.

Mr. WHEELER. And a half a cent a pound freight to Boston?

Mr. LAWRENCE. Yes, sir; and it will take 12 cents as an import duty to give us adequate protection, and 12 cents is less than half the protective benefit we got under the act of 1867; it is less than the protective benefit we got under the act of 1883, although under the act of 1883 our wool industry declined.

Mr. DOLLIVER. You mentioned 24 cents on that Australian wool?

Mr. LAWRENCE. Twenty-four cents on 9 would be 33 cents, and that Australian wool will command from 4 to 7 cents a pound in our market more than our wool, and that would leave us in Ohio not more than 25 cents a pound for washed wool.

Mr. DOLLIVER. Does that higher price come from the different varieties of the parts of the fleece cut off?

Mr. LAWRENCE. The higher price comes from the fact it shrinks less, and in part from the skirting, and in part because there is a demand required by fashion for a soft kind of wool with a particular luster; and my theory is, if gentlemen insist on wearing cloth made from a particular kind of wool such as we do not produce, and insist upon a foreign luster, that is a *luxury* for which he should be compelled to pay a luxurious tariff. But our bill does not base any duty on luxury but only on needed protection.

Mr. DOLLIVER. Does that skirted or cut-off variety of parts of the wool affect the value of the rest?

Mr. LAWRENCE. Yes, sir; it adds to the value of what is left. I am speaking of the 9-cent wool, whole fleece.

Mr. JOHNSON. You could not figure in the 24 cents a pound as against the whole fleece, that would be on the 12-cent skirted wool?

Mr. LAWRENCE. Yes, sir. But woolgrowers would accept less than 24 cents on unskirted wool.

Mr. JOHNSON. You only ask 12 cents duty on the 9-cent wool?

Mr. LAWRENCE. The 9-cent wool unwashed will shrink in scouring as much as Ohio washed. Our bill asks for 24 cents on account of its light shrinkage. Suppose we imported wool from South America. If we import in the grease we want 12 cents a pound; if we import it washed we want 24, and if we import it scoured we want 36 cents. Upon the general average the wools of the world will shrink 66 per cent in scouring. Then we want Australian wool put upon the same footing as South American wool. We will be entirely satisfied to have Australian merino put on an equal footing with other merino wools of the world.

Mr. TAWNEY. To what extent is the shrinkage affected by the skirting?

Mr. LAWRENCE. Only a little. It is affected somewhat, but the shrinkage is not affected very much by the skirting. There is a great mistake in the popular mind about the effect of skirting. There is a prevailing opinion in some localities where the subject is not fully understood that the skirting is the sole reason for the advantage which Australian merino has over other wools. The fact is the greatest advantage it has is the light shrinkage in scouring. This is a chief reason why it commands a higher price than other wools, but there are other reasons, as I have stated.

Mr. TAWNEY. Do I understand you to say that is due to climatic conditions?

Mr. LAWRENCE. Yes, sir.

The CHAIRMAN. Would a pound of Australian wool be imported in this country at a duty of 24 cents?

Mr. LAWRENCE. I think it would. Certainly it would. Besides that I do not think it would be a misfortune to transfer our purchases from that country, to which we may in future expect to pay gold for wool. Our policy is to import from South America, where we may hope soon to pay in our manufactured products, and to some extent in agricultural products, and thus increase our trade with South America.

Mr. TURNER. Would it not be a good plan in that view to let the duty remain off so as to have a basis of reciprocity with South America?

Mr. LAWRENCE. There are ample products in both countries on which to predicate reciprocity without importing those products like wool, which we can soon supply sufficiently to meet all American needs. If we admit wool free as a basis for reciprocity, we would surrender the policy of protection, and I could not indorse that, as I am a protectionist.

### XXIII. OHIO AND THE FAR WEST STATES NEED THE SAME TARIFF RATES.

1. *Reasons why.*—Sheep husbandry requires for success substantially about the same protective rates for Pennsylvania, Ohio, and States similarly located, as also for Texas and the far West States.

Wools in Texas and the far West States can be produced at *less cost* than in Ohio and States similarly located, but the wools of the former are *not of equal value* with Pennsylvania and Ohio wools, as shown by the market quotations of prices. (Senate Document No. 17, December, 1896, pp. 108-111, 134-136.)

One reason is that in some of the far west localities alkali dust in the atmosphere renders the wool fiber inferior to that of more easterly States.

All things considered, about the same tariff rates are needed for all sections of the country.

While the freight charges are higher from Texas and far West States to the Eastern market than from Ohio, yet in the former wools are produced in larger flocks and sold in larger quantities and with less of local wool buyers' profits than in the more easterly States.

2. *Soon the cost of producing wools in Texas and the far West will be increased.*—In some of the far West States woolgrowers have the benefit of pasturage on Government lands free of cost. But that condition can not long continue; the lands will soon be taken up by purchasers. A tariff bill should look to the future as well as the present.

Australasian merino is the chief competing wools with Pennsylvania, Ohio, and other States east of the Missouri River. South American merino and Cape wools are the chief competing wools with those of our far West States.

#### XXIV. THE PROTECTIVE BENEFIT OF WOOL TARIFF.

1. *Considerations on the subject.*—In reaching a conclusion as to the "*protective benefit*" of a given "*tariff rate*," we must bear in mind the effect, as already stated, of:

(1) The skirting clause (1) increasing *value*, and (2) saving cost of *sorting* foreign wool.

(2) The lighter shrinkage of Australasian merino.

(3) The higher price it commands by reason of the soft, lustrous character of the wool.

(4) The difference in cost of reaching the ultimate American market to the Melbourne or London wool owner and that of wool owners in our American States.

2. *A statistical table of results of protective benefits.*—And keeping these in view, upon the evidence produced, the following RESULT is reached as to the "*protective benefit*" of the duty of 11 cents per pound under the act of 1890, based on computation of Mauger & Avery, eminent New York wool importers.

1374 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

In other words, the *nominal duty of 11 cents per pound under the act of 1890 was in effect reduced*, as shown by the following:

*Table showing the reduction of the protective benefits of different tariff rates by importing wools shrinking in washing and scouring less than the wool tariff law contemplated.<sup>1</sup>*

| 6 cents duty .....                           | 6                                  | .....              | .....              | .....             | 4 $\frac{2}{7}$   | 3 $\frac{3}{7}$   | 23 $\frac{3}{17}$ | 2 $\frac{4}{7}$   | .....           | .....             |
| Third class, shrinking 40 per cent:          |                                    |                    |                    |                   |                   |                   |                   |                   |                 |                   |
| 4 cents duty .....                           | 4                                  | .....              | .....              | .....             | 3 $\frac{1}{3}$   | 2 $\frac{2}{3}$   | 24 $\frac{1}{15}$ | 2                 | .....           | .....             |
| Third class, shrinking 33 per cent:          |                                    |                    |                    |                   |                   |                   |                   |                   |                 |                   |
| 6 cents duty .....                           | 6                                  | .....              | .....              | .....             | 43 $\frac{2}{17}$ | 33 $\frac{9}{17}$ | 33 $\frac{3}{17}$ | 24 $\frac{6}{17}$ | .....           | 15 $\frac{3}{17}$ |

<sup>1</sup>The computation is as follows: Suppose 1 pound of imported wool shrinks to 50 per cent in scouring, 1 pound of protected wool shrinks to 40 per cent in scouring. Then the value of the protected wool is  $\frac{4}{5}$  of the value of the imported wool. If a duty of 12 cents gives a measure of protection of 12 cents on raw wool, it would give  $\frac{4}{5}$  of 12 cents, or 9 $\frac{3}{5}$  cents, on scoured wool shrinking 60 per cent;  $\frac{3}{5}$  of 12 cents, or 8 $\frac{4}{5}$  cents, on scoured wool shrinking 66 per cent;  $\frac{2}{5}$  of 12 cents, or 7 $\frac{1}{5}$  cents, on scoured wool shrinking 70 per cent;  $\frac{2}{5}$  of 12 cents, or 6 cents, on scoured wool shrinking 75 per cent;  $\frac{2}{5}$  of 12 cents, or 4 $\frac{1}{5}$  cents, on scoured wool shrinking 80 per cent; and so on for all the other calculations.

THE RESULT IS, that under the act of 1890 a duty of 11 cents per pound on *unwashed* Australasian “skirted” merino wools, of the same quality of American unwashed fleece merino, under conditions existing July 1, 1893, gave to the woolgrowers of the United States a measure of protective benefit, as follows:

| <i>On American wools shrinking in scouring, specified per cent.</i> | Protective benefit. | Deduct the added value to Australian wool by skirting. | Deduct the advantage in freights which Australians have over American far West wools. | Net benefit.     | Less than no benefit. |
|---------------------------------------------------------------------|---------------------|--------------------------------------------------------|---------------------------------------------------------------------------------------|------------------|-----------------------|
|                                                                     | <i>Cents.</i>       | <i>Cents.</i>                                          | <i>Cents.</i>                                                                         | <i>Cents.</i>    | <i>Cents.</i>         |
| 60 .....                                                            | 8 $\frac{4}{5}$     | 2                                                      | 2 $\frac{1}{5}$                                                                       | 4 $\frac{3}{10}$ | .....                 |
| 66 .....                                                            | 7 $\frac{1}{5}$     | 2                                                      | 2 $\frac{1}{5}$                                                                       | 2 $\frac{4}{10}$ | .....                 |
| 70 .....                                                            | 6 $\frac{3}{5}$     | 2                                                      | 2 $\frac{1}{5}$                                                                       | 2 $\frac{1}{10}$ | .....                 |
| 75 .....                                                            | 5 $\frac{1}{5}$     | 2                                                      | 2 $\frac{1}{5}$                                                                       | 1                | .....                 |
| 80 .....                                                            | 4 $\frac{1}{5}$     | 2                                                      | 2 $\frac{1}{5}$                                                                       | .....            | 0 $\frac{1}{10}$      |

The freight rates from some parts of the far West, especially California, are less than 2 $\frac{1}{2}$  cents per pound, but the charges for carriage from ranches to railroad stations constitute an item of expense, and these wools are subject to commissions in reaching the manufacturers.

The Chicago American Sheep Breeder, after careful inquiry, gave the following in the December number, 1895:

*Transmississippi rates.*—Current freight rates on wool from points west of the Mississippi River to New York, Philadelphia, and Boston are substantially as follows: From Montana and the Dakotas, \$1.50 per 100 pounds; from Wyoming, Idaho, eastern Oregon, and Utah, \$1.90 per 100 pounds; from Arizona and New Mexico, \$2.50 per 100 pounds; from Colorado, \$2 per 100 pounds.

The statement of Mauger & Avery referred to above is as follows:

NEW YORK, July 24, 1893.

S. N. D. NORTH, Esq., Boston.

DEAR SIR: Your favor of the 21st instant is received, inclosing proof slip of the letter and tables prepared by us a year ago for the Senate Finance Committee with the request to make the calculations with which said letter concludes, based upon the prices of Ohio fine-washed fleeces and Port Phillip (Australian) good average grease as these prices stood July 1, 1893.

Continuing that same basis of calculation, we reach the following result, viz:

Ohio fine-washed fleece costing 24 cents July 1, 1893, and shrinking 55 per cent, costs  $53\frac{1}{4}$  cents per scoured pound.

Port Phillip good average grease, costing in London, July 1, 1893, 18 cents, and also shrinking 55 per cent, costs in the United States, duty and charges paid,  $67\frac{3}{4}$  cents per scoured pound, as follows:

|               |        |
|---------------|--------|
| Wool .....    | \$0.18 |
| Duty .....    | .11    |
| Charges ..... | .0150  |
| Cost.....     | .3050  |

or  $67\frac{3}{4}$  cents per scoured pound.

Cost in London, 40 cents per scoured pound.

The difference between  $53\frac{1}{4}$  cents and 40 cents, or  $13\frac{1}{4}$  cents, is the amount by which the price of Ohio fine scoured wool is enhanced because of the duty and charges. This, on fine Ohio, shrinking 55 per cent, is equivalent to 6 cents in the washed condition.

If we assume the duty of 11 cents per pound removed, and take the prices of Ohio and Port Phillip that ruled July 1, 1893, as the basis of another calculation, viz:

Ohio fine-washed fleece costing 24 cents and shrinking 55 per cent gives clean cost  $53\frac{1}{4}$  cents, and

|                                                     |        |
|-----------------------------------------------------|--------|
| Port Phillip, good average, costing in London ..... | \$0.18 |
| Freight and charges added.....                      | .0150  |

Making cost landed in the United States..... .1950

which, shrinking 55 per cent, gives clean cost of  $43\frac{1}{2}$  cents, we still find Ohio fine washed costing more than Port Phillip on this calculation, 10 cents per scoured pound more; but it would really be greater, inasmuch as Ohio fine-washed fleece is not skirted, and its cost is thereby increased over that of Port Phillip, at least 3 cents per scoured pound, in our opinion. The difference of, say 13 cents per scoured pound is, on fine Ohio, shrinking 55 per cent, equivalent to about 6 cents per pound in the washed condition.

We reach the conclusion, therefore, that the inquiry "Whether it is true that the great decline in the price of domestic wool has actually resulted in bringing it temporarily down to a free-wool basis" is easily answered in the negative.

It may be assumed that, upon the removal of the duty of 11 cents per pound, the price of Port Phillip good average wool would advance somewhat in the London market.

What this advance might be, or how permanent it would be, no one can predict.

Besides, there is another feature in the case which may properly be considered in this connection, i. e., that there are some Australian wools which, because of their heavy shrink, have not been bought for the United States. Such wools are relatively cheaper to the foreign manufacturer than the wools usually imported to this country.

In the event of "free wool" the advance would be more likely to take place on these heavy shrink wools rather than on those hitherto brought here under the duty of 11 cents per pound.

Yours, truly,

MAUGER & AVERY.

This estimate was on *prices as they stood July 1, 1893*—that is, on Port Phillip. London price, 18 cents per pound, and the New York price same date of Ohio unwashed merino, 24 cents.

The effect of the 11 cents per pound duty then was:

- (1) It gave *no protective benefit* to Ohio unwashed merino.
- (2) It gave to Ohio washed shrinking 55 per cent in scouring a protective benefit of 6 cents per pound.
- (3) On scoured Ohio merino the protective benefit was about 12 cents.

But it is ESPECIALLY to be observed that when the London and New York prices of wools declined the “protective benefit” declined in like proportion.

But in making computations in this argument I have not made any reduction.

The results given are verified by the statement of the Government actuary in the Treasury Department, as follows:

WASHINGTON, D. C., January 11, 1897.

Jos. S. McCoy, Esq., Government Actuary.

SIR: Please answer for use before the Committee on Ways and Means in Congress on the following facts, the questions thereto appended. The value of wool as shorn in the grease depends on the clean product it will yield in scouring. The Australian unwashed merino, as imported, shrinks in scouring an average of 50 per cent. Ohio merino unwashed shrinks in scouring 66⅔ per cent. It has been demonstrated by Manger & Avery that a tariff rate of 11 cents per pound gave to Ohio washed merino, shrinking 55 per cent, a protective benefit of 6 cents in competition with Australian, as conditions and prices stood July 1, 1893.

- 1. What is the protective benefit to an unwashed pound of such Ohio merino?
- 2. What is the protective benefit to a pound of scoured wool?

ANSWER.

Assuming that the price of such Australian Port Phillips washed was, July 1, 1893, 18 cents per pound, and that Ohio washed was, in Boston, 24 cents per pound; then, owing to the different shrinkage of the wools, the prices of the several stages of the wool would be as follows:

|                | London<br>(Port<br>Philip). | Boston<br>(Ohio). | Protective<br>benefit. |
|----------------|-----------------------------|-------------------|------------------------|
|                | Cents.                      | Cents.            | Cents.                 |
| Unwashed ..... | 12                          | 12                | 0                      |
| Washed.....    | 18                          | 24                | 6                      |
| Scoured.....   | 24                          | 36                | 12                     |

If the prices now are half those quoted, the corresponding prices and protective benefits would be as follows:

|                | London<br>(Port<br>Philip). | Boston<br>(Ohio). | Protective<br>benefit. |
|----------------|-----------------------------|-------------------|------------------------|
|                | Cents.                      | Cents.            | Cents.                 |
| Unwashed ..... | 6                           | 6                 | 0                      |
| Washed.....    | 9                           | 12                | 3                      |
| Scoured.....   | 12                          | 18                | 6                      |

Yours respectfully,

JOSEPH S. MCCOY, Government Actuary.

XXV. THE RATES OF DUTY NOW NEEDED ON MERINO WOOLS.

1. *The rates stated.*—The woolgrowers’ bill asks for a duty on unwashed merino wools of 12 cents per pound, double on washed, treble on scoured.

So far as the *double and treble* duties are concerned, they were provided for in the acts of 1867, 1883, and 1890. They have been shown to be just by what has already been said.

2. *The rate asked for very moderate.*—I now propose to show that this rate of duty is very moderate—not at all “the most ample protection.”

Personally I endeavored to secure in the bill 14 cents, and the Ohio Woolgrowers’ Association in January, 1896, resolved in favor of duty of “12 cents on combing wools and 15 cents on merino” unwashed. (Senate Document No. 17, December, 1896, p. 96.)

But in preparing a bill the National Woolgrowers' Association determined to be so moderate in all they asked as to leave no just ground for opposition.

They proceeded on the theory that it would be uncandid and below the dignity of honorable men to ask for more than was just and necessary.

3. *Evidence of the necessity for this rate.*—The evidences of the necessity of this rate of duty are numerous.

#### (1) EXPLANATORY.

The rate of duty will depend on (1) the cost of producing wools here, and (2) the world's price of competing wools. The London price is regarded as the world's price. Port Philip, Australasian merino is the standard on which Ohio and similar merino is compared. But in making the comparison the scoured pound of each would be the standard by which to judge. And as the imports of wool under a tariff WILL ALWAYS BE THE LIGHTEST it is safe to estimate the shrinkage of unskirted, unwashed Australasian merino at 50 per cent, and the average Ohio at 66 $\frac{2}{3}$  per cent.

2. *Preliminary facts—Statistics of foreign wool price.*—Our wool tariff acts now to be considered are those of—

- (1) March 2, 1867;
- (2) March 3, 1883; and
- (3) October 1, 1890.

It is important to see the world's prices, therefore, in the years 1867, 1883, 1890, and 1896.

The world's prices for these years were as follows:

| Year.        | London price, Australian good scoured, per pound. | Equivalent for Ohio average unwashed, without tariff. | The average farm value of unwashed merino, without tariff. | Equivalent for Ohio average, washed, without tariff. | Boston value, with tariff, washed merino. | Farm value, with tariff. |
|--------------|---------------------------------------------------|-------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------|-------------------------------------------|--------------------------|
|              | Cents.                                            | Cents.                                                | Cents.                                                     |                                                      | Cents.                                    | Cents.                   |
| 1867 * ..... | 68                                                | † 23                                                  | .....                                                      | .....                                                | ‡ 57 $\frac{3}{4}$                        | 54                       |
| 1883 .....   | 59                                                | 20                                                    | .....                                                      | .....                                                | 40 $\frac{1}{2}$                          | 37 $\frac{1}{2}$         |
| 1890 .....   | 50                                                | 16 $\frac{2}{3}$                                      | 12                                                         | .....                                                | 33                                        | 30                       |
| 1894 .....   | 36                                                | 12                                                    | 8                                                          | .....                                                | § 20 $\frac{1}{2}$                        | 17 $\frac{1}{4}$         |
| 1896 .....   | 28                                                | 10                                                    | 8                                                          | .....                                                | Free wool.                                | .....                    |

\* Unskirted.

† Gold value. All the values given are gold.

‡ The currency price of washed Ohio in 1867 was 57 $\frac{1}{4}$ , with gold then at a premium.

§ Certainty of free wool aided reduction of price.

These quotations, to and including 1894, are from the Wool Book of 1895, by Hon. S. N. D. North, estimating American merino on the UNWASHED basis, with a shrinkage of 66 $\frac{2}{3}$  per cent in scouring. The quotations of Helmuth, Swartze & Co., London, December 10, 1896, are:

|                                        | Merino, average to good.               | Equivalent in cents. |
|----------------------------------------|----------------------------------------|----------------------|
| Port Phillip—                          |                                        |                      |
| Fleece .....                           | s. d.    s. d.<br>1 1 to 1 3           | 28                   |
| Scoured .....                          | 1 1 $\frac{1}{2}$ to 1 3 $\frac{1}{2}$ | 29                   |
| Greasy .....                           | 8 $\frac{1}{2}$ to 9 $\frac{1}{2}$     | 18                   |
| Buenos Ayres (36 per cent yield) ..... | 4 $\frac{1}{2}$                        | 9                    |

The world's prices are also given in House Mis. Doc. No. 94, Fifty-second Congress, second session, 1894, pages 562-577, being the Report of the Chief of the Bureau of Statistics of the Treasury Department on Wool and Manufactures. And the evidence of these low prices is found in Senate Mis. Doc. No. 35, second session Fifty-third Congress, January, 1894, pages 36, 68, 98, 246.

It will require 3 pounds average unwashed American merino to make 1 scoured pound of the London value of 29 cents, or  $9.66 +$  cents price for each unwashed pound American. But it may be called 10 cents.

The full table of quotations for London are:

*Prices current of the leading descriptions of colonial wool, December 10, 1896.*

[Helmuth, Schwartze & Co., 3 and 4 Moorgate Street Buildings, E. C.]

Thus, it will be seen, the figures taken preceding this table for comparison are NOT THE LOWEST. And besides this, the wools graded as "INFERIOR TO AVERAGE" are really average, equal in selling value to American average.

The following is from The Wool Book for 1895:

*Comparison of annual average prices of Ohio fine washed fleece in Boston, and the same scoured, with prices in London of several competing fine foreign wools since 1850.*

[Mauger & Avery.]

| Year.      | Fine Ohio washed fleece. | Fine Ohio fleece scoured. | Port Phillip (Australian) average fleece (washed). | Port Phillip good average greasy. | Adelaide (Australia) average grease. | Cape of Good Hope average fleece. | Buenos Ayres average grease. | Australian good scoured. | Australian average scoured. | Cape of Good Hope average scoured. | Buenos Ayres average scoured. |

Fine Ohio fleece, January, 1895, 17 cents; scoured, 38 cents.

Column 9 shows the clean cost in London of a class of wool most nearly corresponding to Ohio scoured fleece in column 2. Currency prices throughout in columns 1 and 2.

The prices of unwashed merino, of course, are less than the above prices of washed.

# 1380 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

## PRICES OF WOOL IN LONDON.

[From a statement by Helmuth, Schwartze & Co., published in the London Economists' Commercial History and Review of 1894.]

The following gives the mean point and the value in pence per pound of some leading descriptions of wool on the 31st of December:

|                                                      | Mean<br>point. | Value on December 31— |       |       |       |       |
|------------------------------------------------------|----------------|-----------------------|-------|-------|-------|-------|
|                                                      |                | 1894.                 | 1893. | 1892. | 1891. | 1890. |

‡ Advance.

§ Over.

And this price of 28 cents per scoured pound "average to good" Australian merino, December, 1896, is corroborated by the evidence of Hon. George H. Wallace, lately United States consul-general to Melbourne, who shows that the Australian woolgrowers *admit* that they can place skirted merino on shipboard at Melbourne for 6d. (12 cents) per pound, which is equal to 24 cents per scoured pound, and this can be laid down in Boston for *less* than 28 cents. (See his consular report, August 5, 1892, already referred to.) He repeats the same statement in the January, 1897, number of that valuable publication the Quarterly Bulletin of the National Woolgrowers' Association, page 19.

And he shows that the alleged 12 cents means that whole-fleece wools can be put on shipboard for 9 cents per pound.

He says:

The Australian woolgrower has said he believes he "can place his wool on the wharves of Melbourne or Sydney at a cost of 6d. (12 cents) per pound; but," he adds, "that would leave me but little for improvements or to carry on through a succession of bad seasons." You will observe that he says he will not be pinched or put on short rations unless the price goes below 6d. We may infer, if it did, he would be obliged to practice economy and a bad season would get him into difficulty. But what does he mean by 6d., or 12 cents, for his wool? To understand this statement and take in its full significance, we must know something of his manner of speech. No squatter ever tells what he was paid for the tail of his clip, nor does he ever average the prices given for his different sorts, but when he says he received 6d. or 10d., as the case may be, he means that was the highest price paid for any of his wool, for the best or "top" of his shearing, and means, therefore, that he can produce wool so long as he receives 12 cents for the best of it. The "top" is usually about one-half of the clip, and if this is sold for 6d. the balance would not bring over 3d., or an average of 4½d., or in United States currency 9 cents per pound for the fleece on the wharves of either Sydney or Melbourne. It has been asserted that the distance between the shores of Australia and those of the United States should afford a margin in favor of the domestic product, but such is not the case. Freight rates on wool from the Mississippi to the seaboard are 33½ per cent more than chartered ship charges from Melbourne to Boston, and shipped in wooden vessels the cargo will gain enough in weight to more than pay the interest involved in the longer time required for the voyage.

These and some other wools of similar light shrinkage are the wools that compete with Pennsylvania, Ohio, Michigan, Indiana, Iowa, Missouri, and States similarly located. When unwashed and unskirted, by reason of their lighter shrinkage, they will command in Boston 3 cents per pound more than Ohio, and, with an advantage of 2 cents in freights, this would only leave a protective benefit to Ohio of 7 cents and would only thus give Ohio 17 cents per pound for unwashed merino. If even the Boston cost of the Australian was 12 cents, a duty of 12 cents would only give Ohio 19 cents for unwashed merino.

As these wools compete with Ohio and States similarly located, the far-west States should accord to woolgrowers of Ohio and similar States the privilege of fixing the duty.

But if the duty be less than 12 cents, Australasian merino will come in to the ruin of the wool industry in the far-west States. The unwashed Australian skirted will command in Boston 5 cents per pound more than Utah, Texas, and other far-west States, and with 2 cents per pound advantage in freights this will only leave a protective benefit of 3 cents per pound for Utah, and give woolgrowers there a farm value of less than 10 cents in competition with Australian.

The South American merino and Cape merino are those chiefly similar to our far West merino, but as under a tariff the lightest shrinkage of these will be imported they will have that advantage. In 1894 the London price of Buenos Ayres merino yielding 36 per cent scoured was 9 cents. These wools can be laid down in Boston as cheaply as in London.

With a Boston price of 9 cents, a duty of 12 cents would give a protective benefit of 9 cents, and with a free-trade farm value of this wool in 1896 of only 6 cents, the farm value in Utah would be 15 cents.

This is the competition we encounter.

3. *As to imports.*—These facts can not be overcome by an exhibition of INVOICES of SALES, which may have been made under peculiar circumstances not apparent on their face.

And Mr. Wallace calls attention in these words as to wool imports:

The United States Treasury Department reports 123,000,000 pounds of No. 1 wool imported into the United States in the grease during the year ending September 30, 1895, at an average value of 10½ cents per pound. (Bulletin, p. 118.)

It will require a tariff with a "protective benefit" of 12 cents per pound to give American woolgrowers needed protection in competition with merino wools imported at such prices.

4. *Why a wool tariff should be even more ample than present foreign wool prices would seem to justify.*—There are reasons why a wool tariff should be more ample than present foreign wool prices would seem to justify. WHENEVER A WOOL TARIFF SHALL BE IMPOSED, FOREIGN WOOL PRICES WILL GO DOWN AND DOWN IN ORDER TO GET INTO OUR MARKETS, JUST AS THEY WOULD GO UP AND UP IF FREE WOOL WERE CONTINUED LONG ENOUGH TO DESTROY OUR WOOL INDUSTRY. This is shown in principle and effect by what is said by Mauger & Avery on the subject. (See Senate Document No. 17, Fifty-fourth Congress, December, 1896, p. 64.)

The wool circular of Justice, Bateman & Co., February 1, 1897, says:

If there was any guaranty that the present prices of foreign wools would be maintained, a duty of 9 cents per pound would probably approach a figure that would be satisfactory to all but woolgrowers. But as the best class of skirted Australian wools on at least two occasions within the past eleven years have been 6 cents per pound below the present price, and will in all probability soon be that low again after the reimposition of a tariff upon wool, 6 cents of the 9 cents tariff would soon be offset by the foreign decline. The American grower would then have on an average of but 3 cents per pound more than the present prices for his wool. Therefore, while a duty of 9 cents would be ample at the start, a permanent duty of 9 cents per pound would, in our opinion, be insufficient.

Our tariff should be framed with a view to meet the competition of Australian whole fleeces laid down in Boston at 10 cents per pound.

## (2) EVIDENCES.

### FIRST EVIDENCE IN FAVOR OF DUTY OF 12 CENTS—PROTECTION UNDER THE ACT OF 1867.

Thus it is seen that in 1867, when the world's price for unwashed Ohio merino was in currency 57¾ cents per pound, the act of 1867 gave it a protective tariff as follows:

On clothing wools [merino], unwashed, value 32 cents per pound or less, 10 cents per pound and 11 per cent ad valorem; value exceeding 32 cents per pound, 12 cents per pound and 10 per cent ad valorem; washed, double duty, etc.

This was a duty equal to 13.52 cents per pound on wools in the world's market of the value of 32 cents per pound, and a duty of 15.2 cents per pound on wools of the world's value of more than 32 cents per pound. Of course when the world's price is high less duty is required than when it is low. Now that the world's London price may fairly be said to be only 10 cents per pound, for unwashed merino other than Australian, woolgrowers might well ask a duty of more than 20 cents to be equal to the tariff of 1867. This world's price of 10 cents, allowing 1

cent cost to reach the American market, would make the Boston price 11 cents; and this corresponds with the market quotation, which, for July 1, 1896, and for XX unwashed Ohio merino was 12 cents; and the average merino is not XX.

*Table showing the price per pound for the leading grades of American wool in the Eastern market, etc.*

Every woolgrower knows that these free-wool prices are ruinous to American sheep husbandry (Senate Document No. 17, December, 1896, pp. 110, 136, 164).

Besides the *statutory* protection of the act of 1867 the *gold premium* to 1879 was large added protection.

#### SECOND EVIDENCE IN FAVOR OF RATE—PROTECTION UNDER THE ACT OF 1883.

In 1883, when the world's FREE-WOOL\* prices for unwashed Ohio merino shrinking 66⅔ per cent in scouring was equal to 20 cents per pound and needing more protection than in 1867, Congress made the fatal mistake of giving protection reduced down to the following:

Clothing wools, value 30 cents per pound or less, 10 cents per pound; value over 30 cents, 12 cents per pound; washed wool, double duty.

Much of the world's unwashed light-shrinkage merino then commanded in the world's markets over 30 cents per pound; and yet, with a protective tariff of 12 cents per pound on such wools and of 10 cents per pound on all other, merino sheep husbandry declined. Under it sheep declined in number from 50,626,626 in 1884, with a wool clip of 308,000,000 pounds, to only 43,431,136 in 1891, producing 285,000,000 pounds.

How can sheep husbandry prosper *now* even with a duty of 12 cents?

The Ohio Wool Growers Association, in January, 1896, were right in asking for a tariff of 15 cents per pound.

\* The Boston *protected* price was then, for American WASHED, 40½ cents per pound.

## THIRD EVIDENCE IN FAVOR OF THE RATE—THE TARIFF ACT OF 1890.

The act of 1890 gave to unwashed merino a duty of 11 cents per pound when the world's London price was equal to  $16\frac{2}{3}$  cents on unwashed merino shrinking  $66\frac{2}{3}$  per cent, and the protected American price on washed merino was 35 cents.

Under that act sheep husbandry barely lived—LIVED ON HOPE more than realized benefits—hope deferred—with declining wool prices, and lived ONLY because the world's prices of all farm products from *some cause, or causes*, were so low, that wool was placed in the midst of disasters, and the inadequate tariff, as conditions soon became, was merely a *tabula in naufragio*, only awaiting the shipwreck which came with the free-wool act of 1894.

It has been well described "as an act of confiscation" entitled to ample compensation.

## CALL A HALT IN THE WARFARE AGAINST WOOLGROWERS.

It is time to call a halt in the warfare on sheep husbandry commencing with the act of 1883. Without hostile legislation, it is beset with dangers which no other agricultural industry encounters. Dogs, dogs, everywhere! Coyotes, wolves, and free-wool legislation, worse than wolves! It encounters losses by disease, storms, blizzards. It now appeals for help.

Certainly enough has been said to show that a duty of 12 cents per pound is very moderate indeed.

But there is more—

## FOURTH EVIDENCE IN FAVOR OF RATE.

The able secretary of the National Association of Wool Manufacturers in the September, 1896, bulletin of the association says:

The market reports show that the world's production of wool has doubled since 1870, and that the demand for it has been steadily lagging behind this enormous increase in supply.

The clip of the present year, according to the annual estimates of the National Association, will not exceed 270,000,000 pounds, and the average FARM VALUE WILL NOT EXCEED 8 CENTS A POUND, reducing the total value to \$20,800,000—a loss of 60 per cent.

And the accuracy of this is proved by statistics of prices in 1896. (See ESPECIALLY Senate Document No. 17, December, 1896, pp. 107–110, 133–136.)

If the duty of 12 cents would give a protective benefit of 12 cents, the average farm value would only be 20 cents, but this will not give just compensation for merino wool production east of the Missouri River.

But a tariff rate of 12 cents, even with the skirting clause omitted, will not give a protective benefit of more than 8 cents in competition with Australasian merino shrinking only 50 per cent in scouring. The LIGHTEST will be imported, and it will for that reason command all of 3 or 4 cents per pound in our markets more than our AVERAGE merino.

Added to this is the advantage in freights in favor of Australasian wool.

There is still another mode of estimating needed duty.

## FIFTH EVIDENCE IN FAVOR OF THE RATE.

In order to fix the proper tariff duty for wools, it is necessary to ascertain—

1. The cost of production.

2. The cost of shipment from the farm or ranch to the ultimate market, including (1) local wool buyers' profits, (2) freight charges, (3) commissions of wool dealers, (4) insurance and interest.

3. The free-wool farm value—that is, the price at the local market nearest to the farm or ranch under free wool, as in the past two years.

It is manifest that the London or other foreign price of competing wools is not a safe or just basis on which to make an estimate in fixing duties, because—

1. The foreign wools selected to be imported into the United States will *always* be (1) of the best of any particular class, and (2) having the lightest shrinkage in scouring, and hence (3) will in our American markets command from 3 to 7 cents per pound more than the AVERAGE American wools of similar classes.

2. This is especially so as to foreign wools if imported “skirted.” This has already been shown.

3. The result is that just in so far as the foreign wools of any class will command in our market *more* than the AVERAGE of our American wools of the same class, this excess is so much subtracted from the *nominal tariff*, leaving a *protective benefit* of only the *tariff rate* less the *higher value of the foreign wool*. (See ESPECIALLY in this connection Senate Document No. 17, December, 1896, p. 126.)

The free-wool farm value has already been shown. (Senate Document No. 17, December, 1896, pp. 29–32, 134–137, 164.) But in this connection it is proper to show the farm value for merino wool, as follows:

Table showing the price per pound for the leading grades of American wool in the Eastern market, etc.

| Grade.                                                                             | 1895.                                             |                       |                                                   |                       | 1896.                                             |                       |                         |                          |                         |                         |

| Montana fine average, California fine, choice Nevada, and choice fine Wyoming..... | .10                                               | .05                   | .10                                               | .05                   | .09                                               | .04                   | .08                     | .08                      | .08½                    | .09                     |
| Montana, California, Nevada, and Wyoming fine scoured.....                         | .33½                                              | .....                 | .33½                                              | .....                 | .30                                               | .....                 | .26½                    | .26½                     | .28½                    | .30                     |

It should be here noticed that the average merino of Ohio and States similarly located is *not* XX, and the average farm value of unwashed would be not exceeding 9 cents (free wool, world's price), even if the present world's prices can be maintained, as they can not.

If we make the very liberal estimate that a duty of 12 cents would give a protective benefit of 10 cents, as against Argentina unwashed and against Australasian unskirted unwashed merino made dutiable

## 1388 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

as washed, as our bill proposes, the protective benefit would give for our unwashed merino, shrinking  $66\frac{2}{3}$  per cent, as follows:

| Grade of wool, fine merino.                                                                           | Free-wool farm price. | Protective tariff benefit of 12 cents duty. | Protected farm price. |
|-------------------------------------------------------------------------------------------------------|-----------------------|---------------------------------------------|-----------------------|
|                                                                                                       | Cents.                | Cents.                                      | Cents.                |
| Ohio X .....                                                                                          | 10                    | 10                                          | 20                    |
| Territorial:<br>Montana fine average, California fine, choice Nevada, and<br>choice fine Wyoming..... | 5                     | 10                                          | 15                    |

The free-wool farm value is as given by Justice, Bateman & Co. (Senate Document No. 17, December, 1896, pp. 110, 136, 164.)

A Texas woolgrower, writing from Seymour December 1, 1896, to Justice, Bateman & Co., said:

In October, 1891, my clip was sold at  $20\frac{1}{2}$  cents per pound net, while my 1894 clip netted me about  $5\frac{1}{2}$  cents, my 1895 clip netted me  $4\frac{1}{2}$  cents, and 1896 less than 4 cents. I have the accounts of sales to substantiate what I say if any one doubts it. The cost of raising sheep has increased instead of decreased, as we have to pay for all the range we use. It costs me \$300 per year to range 2,000 sheep, \$35 per month for labor, about \$10 per month for board, a wagon and team, a camp outfit, salt, and many incidental expenses not enumerated, which make the cost to us nearly 50 cents a head to run our sheep, and besides we have wolves to kill the sheep.

This year's clip of this section of Texas was all shipped out by the 1st of July, and has been sold in St. Louis at 6 cents, netting the growers less than 4 cents. (Senate Document No. 17, December, 1896, p. 165; Senate Document No. 17, December, 1895, p. 168, 210.)

But if the free-wool farm value in Texas and the Rocky Mountain region should even be 8 cents, with a protective benefit of 10 cents the price would only be 18 cents.

These prices will *not* pay the fair cost of producing merino wools.

The California Wool Association sent the following communication to the Senators and Members of Congress; also to the members of the Ways and Means Committee of the House of Representatives, relative to the hearing of the prospective tariff on wool on the 6th proximo:

SAN FRANCISCO, *December 28, 1896.*

We wish to call your attention and careful consideration to the following facts concerning the wool industry:

The decrease in the clip of the United States for the year 1895 was enormous, and for 1896 will be yet more disastrous. In addition to this enormous falling off in production, prices have fallen so low that it no longer pays the cost of growing. In many instances in our State during the past two years well-known woolgrowers have offered their fall clip of wool to anyone who would shear and take it away, because the expenses of shearing and marketing were greater than its value, thus showing the deplorable condition of the wool industry. Owing to this serious condition of affairs, the California wool clip will show a loss for 1896 of fully 6,000,000 pounds, and the decline in the value of sheep has been about 70 per cent.

## PRICES.

|                                                          | Cents.   |
|----------------------------------------------------------|----------|
| Spring California wool before Wilson tariff ranged ..... | 12 to 22 |
| Spring California wool now range .....                   | 4 to 12  |
| Fall California wool before Wilson tariff ranged .....   | 7 to 15  |
| Fall California wool now range .....                     | 2 to 9   |
| Scoured wool before Wilson tariff ranged .....           | 30 to 55 |
| Scoured wool now range .....                             | 12 to 30 |

The manufacturing interests of the country have also suffered greatly. Our domestic manufacturers can not successfully compete with the low wages paid labor in foreign countries.

Wages in England are much lower than in the United States, and in France and Germany still lower.

Japan is rapidly becoming a manufacturing nation. The wages are absurdly low, being from 38 cents a day for their best operators down to 3 cents and 5 cents for unskilled labor.

The immense importations of wool, shoddy, waste, etc., have lessened the demand for raw material, labor, and manufactured product to the detriment of the entire population of the United States. The effect of this has been to enforce idleness and to stop nearly 75 per cent of the woolen machinery in the United States within the past year. There are in the State of California alone seven scouring mills, employing from 400 to 500 hands, which have been very disastrously affected by the enormous importations of scoured wool from foreign countries.

A thorough protective tariff for both wool and woolens, with specific and not ad valorem duty for wool, and a combined specific and ad valorem duty for goods, neither to be less than the McKinley tariff, will insure reasonable prosperity for our whole country.

A. C. SCHLESINGER,  
M. S. KOSHLAND,  
Committee.

#### THE COST OF PRODUCING WOOLS IN THE UNITED STATES.

It has been shown that the ACTUAL *fair* COST of producing merino wools in the region from Boston to Kansas is *all* of 25 cents per pound, brook washed, *without including anything for profit*, or for risk of loss of sheep by dogs, diseases, or other agencies of destruction, so that such wool should sell for about 30 cents, *farm value*. In Texas the *actual cost* has been estimated at 16 cents *unwashed*, and to allow a fair profit and for risks, interest on investment, etc., the farm value should be at least 20 cents. This would be equal to about 30 cents for fleecce-washed wool. The heavy shrinkage of these wools, and the freight, from 2 to 3 cents per pound to Eastern markets, besides commission, would place Ohio and Texas on about an equal footing.

The evidence to support this is too voluminous now to present, but it will be found in Senate Document No. 17, Fifty-fourth Congress, first session, December, 1895, pages 107, 152; Senate Mis. Doc. No. 35, Fifty-third Congress, second session, January, 1894, pages 36, 68, 99, 253, 254, 265, 269, 270, 279, 288; also Mis. Doc., same session, No. 77, pages 60, 69, 82, 101.

#### SIXTH REASON FOR THE RATE.

(1) *Change of conditions since the act of 1890 was passed.*—Even if the act of 1890 had been adequate—as it was not in the form in which it was passed—yet conditions have changed since that time to require increased duties.

A CONCLUSIVE argument in favor of a DECIDED increase of duties on wool has been made by Justice, Bateman & Co., who show *that the world's prices of wools have largely declined since the act of 1890 was passed*. They say:

Messrs. Helmuth, Schwartze & Co., of London, in their March circular, show that the world's supply of wool from 1891 to 1895 had increased from 2,121,000,000 pounds to 2,342,000,000 pounds, an increase in the world's supply in four years of 221,000,000 pounds. The effect of this enormous increase in the supply upon European markets was to depress the foreign price of wool from £13 1s. 2d. per bale in 1891, to only £11 per bale in 1895, a *decline of over 18 per cent*. This was in consequence of the fact that there was then 221,000,000 pounds more wool in the world than the woolen machinery of the world could consume. (Senate Document No. 17, December, 1895, pp. 31, 101.)

The secretary of the National Association of Wool Manufacturers in the bulletin of the association for September, 1896, says:

In the bulletin of this association appear the monthly quotations of the prices of *sixty different varieties* and growths of domestic wools in the Boston markets. Taking

## 1390 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

these quotations by groups, as they are there arranged, and comparing the prices in April, 1890, with the prices in April, 1896, we have the following results, by groups:

|                                                                                                                                             | Average Price.        |                       | Per cent<br>of decline. |
|---------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------|-------------------------|
|                                                                                                                                             | April, 1890.          | April, 1896.          |                         |
| Ohio, Pennsylvania, West Virginia, Michigan, New York, New England, Kentucky, Indiana, and Missouri, 24 varieties, washed and unwashed..... | <i>Cents.</i><br>30.3 | <i>Cents.</i><br>17.4 | 42.3                    |
| Texas, California, Oregon, Montana, Wyoming, Utah, Colorado, New Mexico, Georgia, and Southern, 26 varieties, scoured.....                  | 49.1                  | 27.4                  | 44.2                    |
| Pulled wools, 10 varieties, scoured .....                                                                                                   | 45.9                  | 28.5                  | 38                      |
| Total, 60 varieties.....                                                                                                                    | 40.9                  | 23.5                  | 42.4                    |

The average decline in the whole group is 42 per cent.

No other commodity, raw or manufactured, has suffered a decline in value which approximates this. Its extent and significance may be shown in the specific case of Ohio XX wool. It has dropped in [Boston] value, in the face of equal competition, from 29 cents in 1892 to 18½ cents per pound in 1896.

This is Boston price, leaving the farm value only 15½ for WASHED XX while the average Ohio wools will not be XX, but only X. Justice Bateman & Co. put the farm value of XX fine unwashed July 1, 1896, at 9 cents. (Senate Doc. No. 17, December, 1896, p. 27.)

It has been shown above that Australasian good *scoured* merino commanded in the London world's market prices per pound as follows:

|            | Cents. |
|------------|--------|
| 1867 ..... | 68     |
| 1883 ..... | 59     |
| 1890 ..... | 50     |
| 1894 ..... | 36     |
| 1896 ..... | 28     |

This leaves the value of unwashed 9½ cents per pound for 1896. These great declines in the world's prices show the necessity for increased protection.

(2) *A mode of computing the protective benefit of a duty of 12 cents per pound.*—I make a statement, which I submit to Theodore Justice, as follows:

“The competition of the Port Philip Australian merino is of so much importance as to justify a most careful examination of its effect in every mode which will throw light upon the subject.

The Australian wool has SEVERAL advantages over Ohio, but I will first consider *two advantages* over Ohio merino:

1. The advantage of LIGHTER SHRINKAGE, and
2. Less cost in reaching the Boston market.

I will now adopt an UNERRING mode of judging of the effect of Australian competition by a mode of computation which eliminates these elements of advantage.

1. The farm value of Ohio XX unwashed merino July 1, 1896, as stated by Justice, Bateman & Co. (Senate Document No. 17, December, 1896, p. 110), was 9 cents. Their statement is appended hereto in the appendix—Prices of Wools. This, of course, was without any tariff benefit. In the mode of computation now being adopted the advantage of the Australian wool in reaching the Boston market is eliminated.

2. The Australian merino is of so much lighter shrinkage than the Ohio that two unwashed pounds of the Australian will make one scoured pound of wool. The wool circular of J. L. Bowes & Bro., Liverpool, December 19, 1896, quotes Port Phillip (Australian) average unwashed at 8 $\frac{3}{4}$ d. (17 $\frac{1}{2}$  cents), and this can be laid down in Boston, say, for 1 cent, making Boston cost 18 $\frac{1}{2}$  cents, and the Boston value of a scoured pound will be 37 cents.

It will require 3 pounds of our Ohio unwashed to make a scoured pound. This in competition with Australian would give the Ohio wool-grower one-third of 37 cents without tariff for each pound of Ohio unwashed, or 12 $\frac{1}{3}$  cents in the Boston market. But the Port Philip has other advantages in commanding a better price than Ohio.

1. As it is imported skirted it has an advantage of three-fourths of a cent per pound by saving the cost of "sorting." It has been claimed that the "skirting" only added 5 per cent to the scoured value of wool. If this be true, then why do Eastern manufacturers object so strenuously to the removal of the skirting clause? But it is not correct. It has been shown that the cost of sorting alone is three-fourths of a cent a pound.

2. Another advantage of skirting is that by rejecting the inferior portion of the fleece the finer, better portion of the imported fleece will sell for 2 $\frac{1}{4}$  cents per pound in the Boston market more than the Ohio unskirted fleece. The evidence of Hon. George H. Wallace, which has been given, shows this to be a decided *underestimate* of the advantage which the Port Philip wool has in selling price.

3. The Australian merino has another advantage. It is a *softer* wool with a peculiar *luster*, which does not add to its *intrinsic* value, but to, satisfy the demand of a luxurious FASHION, adds to its selling price over the Ohio, say, all of 1 cent per pound. Here, then, are 4 cents per pound advantage which the Port Phillip has over Ohio, and by this amount the protective benefit of tariff rates will be reduced. This leaves the Ohio farm value in competition with Port Phillip, and without the benefit of a tariff, to be only 8 $\frac{1}{3}$  cents. And the accuracy of this estimate is proved by the fact that the average farm value of all wools of this country in 1896 was only 8 cents per pound, which includes medium wool of greater value than merino. The tariff, then, must be such as to make up the difference between 8 $\frac{1}{3}$  cents and the fair *farm* price, which the Ohio woolgrower should have for his wool.

A tariff of 12 cents would at most only make it 20 cents for Ohio unwashed merino, and this is *not* the most ample protection even for Ohio, Pennsylvania, West Virginia, and other States east of the Missouri. It would make the farm value of Michigan unwashed merino even less than 18 cents, with the duty added, as the average Michigan merino does not command as much as Ohio. It will not give a farm or ranche value to Utah and Rocky Mountain unwashed merino of 13 cents per pound, because these wools command less price than Ohio, and it costs them something more to reach the Boston market.

I submitted the foregoing statement to the eminent wool dealer, Theodore Justice, for his opinion thereon. I have his answer as follows:

WASHINGTON, January 7, 1896.

HON. WM. LAWRENCE:

MY DEAR SIR: I have examined your foregoing statement relating to the increased cost of several grades of domestic merino wool (unwashed) by reason of the imposition of 12 cents per pound duty, and find that they closely agree with my own

calculations,\* the maximum difference not exceeding 2 cents per pound in one instance and 1 cent in the other.  
Yours, truly, THEODORE JUSTICE.

There are other considerations not to be overlooked.

- (1) *Whenever our tariff shall be imposed on foreign wool the Australian woolgrower, in order to reach our market, will RÉDUCE HIS PRICE.* This may be inferred from the evidence of Mauger & Avery, found in Senate Document No. 17, December, 1896, page 63, and which is given in a subsequent part of this argument.
- (2) And the evidence of Hon. George H. Wallace, which I have presented, shows that the Australian woolgrowers can well afford to reduce their price.

AN ERRONEOUS MODE OF COMPUTATION.

Those who are opposing adequate protection for American wool-growers make their estimates on Port Phillip SUPERIOR unwashed merino, which is quoted by J. S. Bowes & Bro. at 11d. (22 cents), while the AVERAGE is 8¾d. (17½ cents).

But in making a proper protective tariff we must take the AVERAGE American merino, and contrast it with the AVERAGE Port Phillip. And Ohio XX is better than the average American merino. That is, this is so if we assume that Port Phillip is the only merino competing with our American merino.

Those who oppose adequate protection omit to quote the price of OTHER Australian and Cape and Argentina merino competing with

\*Table below, which was calculated upon experience with the McKinley duty of 11 cents on unwashed wool of the first class, and is found in one of the wool circulars of Justice, Bateman & Co.:

American wool, Philadelphia and Boston prices.

[In the third column is shown the amount of protection that actually resulted from the McKinley law on twelve leading grades of American wool; in the fourth column the rates per pound that the McKinley law provided on foreign grades of like kind and quality; in the fifth column an estimate of the amount of protection that the Dingley bill would have supplied if the bill had been passed last winter, and before its influence had been partly discounted by excessive importations.]

| Grades.                                                                 | 1<br>Price in August, 1892,<br>second year of McKin-<br>ley law. | 2<br>Price in August, 1896,<br>second year of Wilson-<br>Gorman law. | 3<br>Amount of protection per<br>pound on each grade<br>under McKinley law. | 4<br>Duty under McKinley law. | 5<br>Amount of protection per<br>pound on each grade<br>under Dingley bill as<br>now proposed. |

| Texas, Utah, Oregon, and Montana fine scoured.....                      | 57                                                               | 28½                                                                  | 28½                                                                         | 33                            | 17                                                                                             |

our American merino. The December (1896) Liverpool wool circular of J. L. Bowes & Bro. quotes as follows:

Adelaide unwashed average, 6d. (12 cents).  
 New Zealand unwashed average, 7½d. (15 cents).  
 Montevideo merino unwashed superior, 7d. (14 cents).  
 Lima unwashed superior, 6d. (12 cents).

Thus it is seen *these wools* come in at less price than the Port Phillip. These are merino wools, with which Ohio and the Rocky Mountain region must compete, and it is manifest that even a duty of 12 cents per pound in competition with these wools will NOT give "the most ample protection."

And now I submit that the CONCLUSION is, that the proposed duty of 12 cents per pound on unwashed merino is less than it should be—less than "the most ample protection."

And I insert the wool circular from which I have quoted as follows:

[From J. L. Bowers & Bro.'s Private Circular, Liverpool, December 19, 1896.]

*Imports and exports of the United Kingdom.*

MOVEMENTS DURING THE MONTH OF NOVEMBER.

|                                            | November,<br>1896. | November,<br>1895. | Increase (+)<br>or decrease<br>(—) in 1896. |
|--------------------------------------------|--------------------|--------------------|---------------------------------------------|
| Total imports.....                         | £42,502,969        | £39,006,941        | + £3,496,028                                |
| Total exports:                             |                    |                    |                                             |
| Home productions and manufactures.....     | 18,539,853         | 19,540,333         | — 1,000,480                                 |
| Foreign productions and manufactures ..... | 4,380,431          | 4,364,070          | + 16,361                                    |
| Total trade.....                           | 65,423,253         | 62,911,344         | + 2,511,909                                 |

In the following table are given the complete figures for the eleven months:

|                                           | Eleven<br>months, 1896. | Eleven<br>months, 1895. | Increase (+)<br>or decrease<br>(—) in 1896. |
|-------------------------------------------|-------------------------|-------------------------|---------------------------------------------|
| Total imports.....                        | £398,303,740            | £379,750,023            | + £18,553,717                               |
| Total exports:                            |                         |                         |                                             |
| Home productions and manufactures.....    | 219,631,003             | 206,989,636             | + 12,641,367                                |
| Foreign productions and manufactures..... | 50,853,653              | 54,943,317              | — 4,089,664                                 |
| Total trade.....                          | 668,788,396             | 641,682,976             | + 27,105,420                                |

Apart from the business in raw wool, the total value of exports of manufactures of wool and wool yarn for the eleven months were:

|            |             |
|------------|-------------|
| 1894 ..... | £18,366,115 |
| 1895 ..... | 24,828,537  |
| 1896 ..... | 23,503,282  |

a Over.

b Under.

J. L. BOWES &amp; BRO.

[Under the leave given by the Committee on Ways and Means to "file statements," I will add to my argument, the matter now inclosed in brackets.

I. The argument in favor of the rates of duty in the woolgrowers' bill was read to a well-attended meeting of the National Woolgrowers' Association January 4, 5, and was adopted by a *unanimous* vote, except about three or four, including C. M. Hogg, of Ohio, and James M. Smith, of Utah, whose *only* objection, as I *understood*, was that they deemed it not advisable now to ask for the rate of duty which the bill would impose on Port Phillip (Australia) merino by deeming as washed the unwashed wool.

II. In view of this, it is deemed proper to give additional evidence of the justice of the rate of 24 cents per pound on the unwashed Port Phillip merino:

1. In order to make woolgrowing even moderately remunerative, Ohio average unwashed merino must sell for *farm* value per pound 20 cents.

There must be added, to reach the Boston market, for local wool-buyers' profits, freights, commissions of Eastern wool merchants, insurance, etc., 3 cents.

Counting 3 pounds of unwashed Ohio wool required to make a scoured pound, the Boston price must be 69 cents to give the Ohio woolgrower a farm price for unwashed merino of 20 cents per pound.

The December 10, 1896, London wool circular of Helmuth, Schwartz & Co., quotes "average to good" Port Phillip in London, scoured, per pound, 28 cents; add for cost of reaching the Boston market, *per pound*, 1 cent. The woolgrowers' bill would impose a tariff per scoured pound of 36 cents.

|                                                                           | Cents. |
|---------------------------------------------------------------------------|--------|
| Total Boston cost of a scoured pound of Port Phillip merino.....          | 65     |
| But this will command at least more selling price than Ohio scoured ..... | 4      |

---

Total selling Boston price per scoured pound of Port Phillip..... 69

This proves that a duty of 24 cents on unwashed and 36 cents on scoured Port Phillip is necessary to give the Ohio woolgrower 20 cents per pound farm value.

2. The evidence of ex-United States Consul-General Wallace, already presented, proves that Port Phillip unwashed and skirted can be put on shipboard at Melbourne, Australia, for 12 cents per pound, or for 9 cents per pound in whole unskirted fleeces. This would place the scoured pound in Boston for even less than 28 cents. And this would be especially so under a tariff when Australian prices would be *reduced* to reach our market.

3. The London wool circular of December 10, 1896, quotes "Port Phillip average to good" at 8½ to 9½, say 9d. (18 cents). If it took 2 pounds to make 1 of scoured, this would be 36 cents per scoured pound. But, as the same circular quotes the scoured at 28 cents, it is evident this wool quoted as "average to good" will not shrink 50 per cent in scouring. And this is confirmed by the fact that their circular of December, 1894, quotes "good average greasy Port Phillip" at 7¾d. (15½ cents), which, if shrinking 50 per cent in scouring, would make the scoured pound 31 cents. But this skirted would evidently not shrink 50 per cent.

3. The December, 1896, Liverpool wool circular of J. L. Bowes & Bro. quotes Port Phillip SUPERIOR at 11d. (22 cents). But this is well *skirted*, practically "sorted," and evidently wool shrinking in scouring probably not 20 per cent—very nearly scoured wool.

4. As to wools of Utah, Montana, etc., Justice, Bateman & Co. have furnished the free-wool farm value of XX Ohio fine unwashed merino, July 1, 1896, at 9 cents per pound, and "Montana fine average, California fine, choice Nevada, and choice fine Wyoming" unwashed, ranch value, 4 cents.

Here is a difference of 5 cents per pound. Hence the duty of 24 cents per pound on unwashed Port Phillip or 36 on scoured would give these States a ranch price of only 15 cents per pound.

The tables of farm values are found in Senate Document No. 17, December, 1896, pages 25-27, 108-110. They are also inserted in the appendix hereto, showing wool prices.

And the Liverpool wool circular of J. L. Bowles & Bro., December 19, 1896, quotes "Port Phillip average greasy, 8 $\frac{3}{4}$ d." (17 $\frac{1}{2}$  cents), while skirted will shrink in scouring less than 50 per cent, making the scoured cost about 30 cents or probably less; and it should be observed that the *average* of Ohio and the far west wools will not equal in scoured value the average Port Phillip.]

5. It is much more easy to denounce the 24-cent duty by startling phrases as to percentage of tariff than to ANSWER THE ARGUMENT made in support of it. I repeat from the published answer of the honorable chairman of the committee: "IT IS PROTECTION WE ARE AFTER."

For one, I will neither be alarmed nor driven from a just purpose by startling or high-sounding phrases in opposition to it. LET THOSE WHO OBJECT ANSWER THE ARGUMENT IN SUPPORT OF IT. Many honest men—perfectly honest—who *have not studied the subject* will at first blush deem the duty too high, but REASON will dispel the objection, as the sun does the morning fog. Let us have *sunlight*, not fog, and no one will knowingly give us petty-fog.

6. Finally, if Congress shall not deem it advisable to give a protective duty which is *per se* just, but which will require explanation to those who do not understand it, a protective wool tariff should at all events contain *some provision* to secure some even inadequate measure of justice to the wools of the world in competing with Australia in reaching our markets, and some measure of protection in our American woolgrowers' struggle for existence against this idiosyncratic Port Phillip wool.

(a) An *increased* duty of a *specific number of cents* could be imposed on it, or

(b) A tariff bill might impose *an additional duty*, measured by the market price in our Eastern cities of these wools over and above the average price of the average of the merino wools of the world.

#### THE PROPER RATE OF DUTY AGAIN.

The proper rates of duty is a matter of so much importance as to justify reasons in support thereof in different forms.

#### COST OF PRODUCING WOOLS IN THE UNITED STATES.

The principal wools of the United States are Merino. The cost of producing these wools east of the Missouri River is—farm value—all of 20 cents per pound for unwashed Merino, shrinking 66 $\frac{2}{3}$  per cent in scouring.

The cost in the Rocky Mountain region is all of 16 cents per pound. This is shown in Senate Document No. 17, Fifty-fourth Congress, first

session, Memorial of National Wool Growers' Association, December, 1895, pages 70, 107, 152, 153.

## COMPETING WOOLS.

The wools east of the Missouri are generally superior in quality to those west, and the farm value of the former unwashed is accordingly about from 3 to 5 cents per pound greater. (Senate Document No. 17, December, 1896.)

The Port Philip Australian Merino is more nearly of the quality of the Merino grown east of the Missouri River, and is usually called the "competing wool." When unwashed, and even unskirted, the good grades will shrink in scouring only 50 per cent. But all foreign wools of every kind compete with all our American wools.

The Merino wools of the Cape of Good Hope and of Argentina are inferior in quality to the Australian, and hence are called "competing wools" for those grown west of the Missouri River, though in fact all foreign wools of every kind compete with them also.

THE PRICE AT WHICH FOREIGN WOOLS CAN BE LAID DOWN IN BOSTON SHOWS THE JUSTICE OF A TWELVE-CENT DUTY—FOREIGN WOOLS COMPETING WITH OUR FAR WEST WOOLS.

The London Wool Circular of Helmuth, Schwartz & Co., December, 1894, quotes London prices per pound as follows (Senate Document 17, December, 1896, p. 141):

|                                                          | Pence. | Cents. |
|----------------------------------------------------------|--------|--------|
| Buenos Ayres average greasy (36 per cent yield).....     | 4½     | 9      |
| Buenos Ayres average greasy (old 30 per cent basis)..... | 3¾     | 7½     |
| This makes the average price in London.....              | 4½     | 8½     |
| Add freight and charges from London to Boston.....       |        | 1      |
| Cost in Boston.....                                      |        | 9½     |

This is the competition which the Merino wools west of the Missouri must encounter. It will cost an average of 3 cents per pound, including commission, etc., to ship these far west wools to Boston, which, in competition with the foreign wool at 9½ cents, will make the ranch price per pound, without tariff benefit, 6½ cents.

But a part of the Buenos Ayres wool quoted yields 36 per cent clean wool, which is from 3 to 6 per cent more than much of the wools west of the Missouri. And, first, by reason of this, and, second, the fact that the lightest of the foreign wools will be imported, and, third, that some advantage should be given to our wool over the foreign, there should be deducted 1½ cents.

This will leave the net ranch price 5 cents.

The correctness of this is shown by the fact that Justice Bateman & Co. quote the ranch price, July 1, 1896, at 4 cents. A tariff rate of 12 cents per pound will never give a "protective benefit" equal to the tariff rate. But suppose it gives a protective benefit of 10 cents?

This would give the price the far West woolgrowers would receive, actual ranch value—the price at the nearest local market—per pound, only 15 cents.

This computation is on price quotations in 1894, with 1 cent added for freight from London to Boston. But in fact South American wool can be laid down in Boston as cheaply as in London, and this is 1 cent in favor of the foreign wool.

PORT PHILIP AUSTRALIAN MERINO COMPETING WITH THE MERINO  
GROWN EAST OF THE MISSOURI RIVER.

The London Wool Circular of Helmuth, Schwartze & Co., December, 1896, quotes "Port Philip average to good scoured" and "skirted" at 28 cents per pound. The letter of Theodore Justice, March 5, 1894, shows that scoured Port Philip was then, London price, skirted only, 30 cents per pound. And this will sell in Boston for 5 to 9 cents more than average scoured Ohio merino. (Senate Mis. Doc. 124, Fifty-third Congress, second session, 101.)

This can be laid down in Boston for 1 cent per pound, but call it 1½ cents, and this makes the Boston price per scoured pound 29½ cents. But call it 30 cents. This is the competition to which the merino wools east of the Missouri River are subjected.

THE COST OF PRODUCING AUSTRALIAN, ARGENTINA, AND CAPE  
MERINO.

Hon. George H. Wallace, United States consul-general to Melbourne under the Administration of President Harrison, shows that Australian merino "skirted" wools can be put on shipboard at Melbourne for 12 cents per pound, and that whole fleeces can be placed on shipboard for 9 cents per pound. His statement is quoted in full in my argument before the Committee on Ways and Means, January 6, 1897: Quarterly Bulletin on the National Wool Growers' Association, Boston, January 1, 1897. And this wool will shrink in scouring only 50 per cent.

This is the competition Ohio and similar wools must encounter—scoured and skirted foreign wools laid down in Boston at less than 30 cents per pound.

CONCLUSIVE EVIDENCE OF THE NEED OF 12 CENTS DUTY.

With the foregoing data the conclusion is inevitable that a duty of 12 cents per pound is not only just and necessary but moderate.

It will require 3 pounds of Ohio and similar unwashed merino to make 1 scoured pound. It will cost 3 cents per pound to reach the Boston market, including (1) local wool buyers' profit; (2) freight; (3) Eastern commission merchant charges; (4) insurance, etc., making for 3 pounds 9 cents.

Here, then, are 9 cents to be deducted from the Boston value of 1 pound of scoured Port Philip, leaving the farm value of each unwashed pound of Ohio merino, shrinking 66⅔ per cent in scouring, without tariff benefit, 7 cents per pound.

If a tariff of 12 cents would give a protective benefit of that amount—as it will not—this would make the farm value per pound of unwashed merino 19 cents.

Justice, Bateman & Co. quoted farm value July 1, 1896, without tariff, at 9 cents, and a "protective benefit" of 12 cents would make it 21 cents. It is safe to say that with a wool tariff of 12 cents per pound the farm value in Ohio and other States east of the Missouri would reach only about 20 cents per pound.

It is well known that, though of less intrinsic value than Ohio, yet by reason of its soft condition and its luster, fashion has made a demand for Port Philip merino which makes it command in the market, even unskirted, from 1 to 2 cents per pound more than Ohio, leaving farm value only 19 cents; and under a tariff foreign wool prices would be

reduced to get into our market. If fashion requires foreign wool, those who indulge in the luxury of foreign fashion should pay a luxurious duty.

The conclusion is inevitable that the duty of 12 cents per pound, in view of present and prospective conditions, is only moderate protection—very moderate.

XXVI. THE LONG WOOLS OF THE MUTTON BREEDS SHOULD BE DUTIA-  
BLE AT THE SAME RATES AS UNWASHED MERINO.

*Historical reasons.*—The woolgrowers' bill makes only two classes of wools:

The FIRST, including (1) the merino, and (2) the long coarse wools of the mutton breeds, and

The SECOND includes all other wools.

The acts of 1867, 1883, and 1890 made three classes of wools:

FIRST. The "merinos" and "Down clothing wool." These were in the acts of 1867 and 1883 called "CLOTHING WOOLS."

SECOND. The Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, etc. These were in the acts of 1867 and 1883 called "combing" wools—the wools of the mutton breeds.

When the acts of 1867 and 1883 were passed, clothing wools were *carded* for manufacturing but not *combed*; the other wools were *combed* but not *carded*. These designations were then proper. By improvements in machinery, and in manufacturing skill after the year 1867 and up to the act of 1890, all these wools could be combed, and hence the latter act discarded the designations "clothing" and "combing," and substituted instead "class one," "class two," but made no provision to adapt the tariff provisions to the changed conditions.

The acts of 1867 and 1883 imposed less duties on combing wools than on clothing wools, especially less in view of the lighter shrinkage in scouring of the former than of the latter. There were reasons for this at the time the act of 1867 was passed:

(1) The world's production of the long wools of the mutton breeds of sheep—the combing wools—was relatively small.

(2) The worsted manufacturing industry, then in its infancy in this country and requiring these wools—unable then to use merino wools—needed encouragement.

(3) The demand for large protection came chiefly from those engaged in the production of merino—the principal clothing wools—and

(4) Hence the relatively low duties on the long wools were adopted.

But all these reasons and conditions have ceased to exist. All these wools are now CLOTHING WOOLS; all can be carded, all can be combed.

(1) The worsted manufacturing industry now can and does use the improved grades of merino wool equally with the long wools of the mutton breeds;

(2) This branch of manufacturing is as firmly established as any other. This is shown by the following

*Statistics of worsted mills, 1860-1890.*

| Year.      | Number of establishments. | Capital.      | Miscellaneous expenses. | Average number of employees. | Total wages. | Cost of materials used. | Value of products. |
|------------|---------------------------|---------------|-------------------------|------------------------------|--------------|-------------------------|--------------------|
| 1860 ..... | 3                         | \$3, 230, 000 | .....                   | 2, 378                       | \$543, 684   | \$2, 442, 775           | \$3, 701, 378      |
| 1870 ..... | 102                       | 10, 085, 778  | .....                   | 12, 920                      | 4, 368, 857  | 14, 368, 198            | 22, 090, 331       |
| 1880 ..... | 76                        | 20, 374, 043  | .....                   | 18, 803                      | 5, 683, 027  | 22, 013, 628            | 33, 549, 942       |
| 1890 ..... | 143                       | *68, 085, 116 | \$4, 917, 760           | 43, 593                      | 15, 880, 183 | 50, 706, 769            | 79, 194, 652       |

\* This amount does not include value of "hired property."

(3) The importation of the long wools of the mutton breeds is not only (1) injurious to our production of merino wools, but (2) it discourages the much-needed increase of American mutton breeds of sheep, and hence (3) retards the growth of national and individual wealth, and (4) diminishes the otherwise abundant supply of the best mutton-meat food.

THE ACT OF 1890.

The tariff act of 1890, in view of the "changed conditions," discarded the classifications of "clothing wools" and "combing wools" and substituted instead "class 1" and "class 2," but illogically and unwisely continued in force a discrimination in favor of the long wools by imposing thereon a duty relatively less, in view of their light shrinkage in scouring, than on merino wools.

The woolgrowers' bill, recognizing the changed conditions and the necessity for adequate protection, properly makes of the wools mentioned but one class. Even this, with the light shrinkage of the long wools, is a discrimination in their favor—a concession to avoid objection by manufacturers.

2. *Reasons in the character of the wools.*—These wools will shrink in scouring not more than an average of about 30 per cent, *especially such as will be imported under a tariff.* (See Senate Document No. 17, December, 1895, p. 50.)

By reason of their light shrinkage 1 pound of these unwashed wools will give as much clean-scoured wool as 2 pounds of average unwashed merino, hence the duty *should be much more than on merino wools.*

But as to the rate, I have yielded my own judgment to that of others in fixing it, and especially in the hope thereby of encountering no opposition.

And there is another reason for including these wools all in class 1.

It is notorious that wools of the higher class have been too frequently imported as of a lower class. Classes open the door to these frauds.

William H. B. Thornton, an eminent wool merchant of Chicago, referring to this subject, says:

Again, on second class wools a tariff [by the act of 1890] was placed of 12 cents per pound, whether washed or unwashed. The consequence was a number of million pounds were imported under the McKinley Act that were used by clothing manufacturers (although down combing wools) in the production of various woolen fabrics. This was strictly an infringement on wools of the first class, because washed wools in this class paid a double duty, while in the second class they came in under the same duty as unwashed wools.

Worsted manufacturers to-day can use all kinds of wool, consequently the act creating the second class on worsted wools made a big loophole for fraud. All who have watched the importation of different classes of stock can readily understand how this feature in the act defeated proper protection. (Senate Document No. 17, December, 1896, p. 67.)

The act of 1890 imposed a duty of 12 cents on these wools.

3. *A Conclusive reason.*—Finally on this subject I especially call attention to the evidence of Ex-United States Consul General Wallace, hereafter given, in the discussion of "a dividing line" for carpet wools. (See Wool Growers' Bulletin, January, 1897, p. 18.)

He shows that if *two classes exist* imported wools will come in under the lowest duty class.

The CONCLUSION is that *these wools should be included in the same class with the merino.*

## XXVII. THE DUTY ON OTHER WOOLS, SOMETIMES IMPROPERLY CALLED CARPET WOOLS.

1. *The rate asked for.*—The woolgrowers' bill asks for a duty of 8 cents per pound on Donskoi, native South American, and other like wools—double on washed, treble on scoured. The acts of 1867 and 1883 imposed double on washed, treble on scoured. The act of 1890 substituted *ad valorem* duties.

2. *So-called "carpet wools" used in the manufacture of clothing goods.*—The acts of 1867 and 1883 classed these wools as "carpet wools," but this designation was rejected in the act of 1890, because then, and even prior thereto and ever since that time, they were and are used largely in the manufacture of clothing goods.

THUS THEY COME IN COMPETITION WITH AND SUPPLANT THE USE OF AMERICAN MERINO AND THE LONG WOOLS OF THE MUTTON BREEDS.

This is proved by abundant evidence. The Boston Commercial Bulletin of August 15, 1896, said:

The wools imported into the United States are of three classes, roughly speaking—merino, English, and neither merino nor English. The wools raised in the United States are mostly merino (such as Ohio, Michigan, and Montana wools) or English blood (such as Indiana, Kentucky, and Maine wools). We also raise a certain amount of third-class or coarse wools in Colorado and New Mexico from the native Mexican sheep. The rough wool on the bellies of our sheep is also sorted in this class. This coarse wool forms, however, but a comparatively small proportion of the American clip, which is mostly fine and fine medium stock.

## CARPET WOOLS USED IN MAKING CLOTHING GOODS.

The third class or coarse wools imported from China and Turkey are, however, used to-day to a very considerable extent for other purposes than carpets, though that is their main use, because the fashion in men's wear to-day is rough, coarse goods, commonly called chevots. \* \* \*

## CHINA WOOLS LARGELY USED TO MAKE CLOTHING GOODS.

China wools are nearly all class 3 wools, and in this year of rough fabrics their use for other purposes than carpets is large. They of course take the place of fine fabrics made from our own fine wools. (Senate Document No. 17, December, 1896, p. 157.)

The Boston American Wool and Cotton Reporter, June 15, 1893, page 756, said of these wools:

WHEN THE MCKINLEY BILL WAS UNDER DISCUSSION, THE EVIDENCE WAS THAT ONLY A SMALL FRACTION OF CARPET WOOLS WAS USED FOR CLOTHING PURPOSES, MAINLY FOR BLANKETS, AND THIS EVIDENCE WAS UNDOUBTEDLY CORRECT. SINCE THEN FASHION AND EXCESSIVE COMPETITION IN THE GOODS MARKET HAVE MADE IT POSSIBLE TO UTILIZE THESE WOOLS IN THE MANUFACTURE OF CLOTHING. A TARIFF THAT COMPREHENDS PROTECTION OF DOMESTIC WOOL SHOULD TAKE COGNIZANCE OF THESE FACTS.

There is abundant evidence to the same effect in United States Senate Miscellaneous Documents numbered 35, 37, and 124 of the second session of the Fifty-third Congress, January, 1894. (Doc. 35, pp. 30, 46, 47, 48, 300; Doc. 77, p. 38; Doc. 124, pp. 60-62; Senate Doc. No. 17, December; Fifty-fourth Congress, first session, December, 1895, pp. 38, 39, 145.)

And the Wool and Cotton Reporter of May 14, 1896, said:

## THE "CARPET WOOL" FALLACIES.

The Boston Herald criticises Judge Lawrence for demanding higher proportional duties than heretofore upon so-called "carpet wools." In the first place, we desire to explain that this demand for a higher ratio upon so-called carpet wools does not originate with Judge Lawrence, but that he merely voices a sentiment which is everywhere prevalent west of the Mississippi River. And in discussing the subject of duties upon wool, the Boston Herald, having a high reputation for fairness, must admit that Judge Lawrence has reason for condemning laws which discriminate in favor of wools from Bagdad, China, and other semicivilized countries, and against wools from Australia and the Cape of Good Hope. Woolgrowers west of the Mississippi River are not persuaded that there are any proper classifications of wool for different rates of duty to-day. Improvements in machinery have made such classifica-

tions a back number, and the theory of definite race distinctions between "carpet" and "clothing" wools never was true.

The Mexican sheep, which produce wools suitable mainly for carpets, are of the old merino stock, brought over by the Spanish conquerors. The Ohio and Australian flocks, which produce the finest fleeces that fashion now demands, are of the same merino stock.

3. *Two injuries to American woolgrowers.*—These wools have a DOUBLY ruinous effect on American wool:

(1) They *supplant the use* of American merino, and the wools of the mutton breeds.

(2) Their LOW PRICE brings down the selling value of our American wools. The import price of all class 3 wools in the fiscal year 1895 was only 9.09 cents.

These wools as they will be imported under an adequate tariff—the lightest attainable—will not shrink in scouring more than 30 per cent; thus the IMPORT OF 1 POUND SUPPLANTS THE USE OF 2 POUNDS OF AMERICAN MERINO.

4. *The extent of the injury.*—This subject is of overshadowing importance (1) to woolgrowers and (2) to the revenue system of the United States.

(1) The imports of third-class wools and the aggregate of first and second class, entered for consumption in the United States, were for specified fiscal years as follows:

| Year.       | Third-class.   | Value.         | Duties.        | Total of first and second classes. |
|-------------|----------------|----------------|----------------|------------------------------------|
|             | <i>Pounds.</i> |                |                | <i>Pounds.</i>                     |
| 1892.....   | 90,560,125.25  | \$8,742,454.00 | \$2,885,012.26 | 44,062,211                         |
| 1893.....   | 133,197,581    | 10,312,237.00  | 3,389,646.54   | 42,438,460                         |
| 1895*.....  | 144,488,265    | 13,135,901.75  | .....          | 121,237,612                        |
| Total ..... | 368,245,971.25 | 32,190,592.75  | .....          | 207,738,283                        |

\* For 1895, total imports.

(2) Thus, in the three years specified, the third-class wools aggregated 368,245,971.25 pounds, and the first and second classes combined only 207,738,283 pounds.

And the imports of 1895, of 144,488,265, were equal in pounds to 288,976,530 pounds of average unwashed merino.

5. *Additional reasons in support of the duty asked for.*—Many woolgrowers believe there should be but one class of wools for the purpose of tariff legislation. The acts of 1867 and 1883 classified these wools as "carpet wools," because prior to 1867—in fact, to a large extent prior to 1883, and even later—these wools were used in the United States only in the manufacture of carpets, and hence their imports did not then interfere with the production of merino wool, though they did reduce the demand for the belly and breech wool of our mutton breeds of sheep. But in 1867 there were reasons for lower duties on carpet wools than on others:

(1) The carpet manufacturing industry in the country was in its infancy and needed encouragement;

(2) The lower duties on carpet wools were a concession to that then infant industry;

(3) At that time the imports of these wools were comparatively small, and

(4) They did not then supplant the use of either our American merino wools or the long wools of the mutton breeds, except to a limited extent the latter, as above stated;

(5) The carpet-wool imports were not used in the manufacture of clothing goods, and

(6) The American supply of carpet wools was then inadequate

But most of these conditions have entirely changed, and with adequate wool protection there would soon be no reason for extending any special favor to these wools—

(1) The carpet manufacturing industry is no longer in its infancy;

(2) It is more firmly established and is more prosperous than any other branch of wool manufacturing, thanks to very “full and adequate protection”—as to many carpets prohibitory. Its success has been phenomenal.

It deserves and should have a measure of protection that will prohibit the importation of foreign carpets of the classes abundantly made by our carpet manufacturers. When they can supply all at fair prices, none should be imported. But these manufacturers are no longer entitled to the aid of foreign carpet wools at low rates of duty for many reasons.

(1) Carpets are in a measure luxuries, entitled to no special favor. Clothing is essential to human existence; carpets are not. Bacteriologists have demonstrated their danger in preserving and disseminating disease germs.

6. *The change of conditions.*—The change of conditions since 1867 (1) in the use of these wools and (2) in the extent of imports justifies, indeed urgently demands, the rate of duty now asked for.

7. *How much protective benefit?*—For reasons already stated as to wools of class one, the “protective benefit” of 8 cents per pound even—

(1) As to American wools of the same class will not exceed an average of 5 cents per pound;

(2) For American merino in competition with these wools it will not be 4 cents per pound.

8. *Encourage the production of carpet wools.*—The woolgrowers’ bill, in its fourteenth paragraph, provides:

That for the period of two years from and after the passage of this act native Mexican ewes shall be admitted free of duty.

The “native Mexican sheep” are the deteriorated retro-evoluted descendants of Spanish merino sheep, introduced on this continent by Columbus, by Cortez, and by Catholic missionaries, and now produce carpet wools, which can be used also in the manufacture of clothing goods. It has been demonstrated that Texas alone, with adequate protection, could soon supply all the carpet wools needed in this country, and with New Mexico added, the world’s supply could be furnished.

The only answer attempted to be made to this is the erroneous averment that American woolgrowers can not supply the needed carpet wools.

Thus an eminent advocate of the interests of wool manufacturers, in their employment, says as to carpet wools:

There is no serious expectation on the part of anyone that we shall ever grow or attempt to grow anything approximating the quantity demanded by our great carpet industry. (Bulletin National Association Wool Manufacturers, June, 1896, p. 116.)

Under proper legislative protection the farmers of the United States can, and in due time will, supply all wool of every kind needed for consumption in this country.

(1) To anyone familiar with the wide extent of the American domain and with sheep husbandry this proposition is self-evident.

But if evidence be desired to prove it, it will be found in United States Senate Mis. Docs. Nos. 35, 77, and 124 of the second session of

the Fifty-third Congress, especially in chapter first of the Document No. 35 and in Document No. 124, page 122, and in Senate Mis. Doc. No. 149, Fifty-first Congress, first session, and in Senate Document No. 17, first session of the Fifty-fourth Congress. The evidence is too voluminous to be reproduced here, but it is overwhelmingly unanswerable.

(2) The "breech" and "belly wool" of our long-wool sheep is of the coarsest class of carpet wools, and with the number of sheep in this country requisite to supply all our wool and mutton—110,000,000, as we should have, and soon would have, under adequate protection, instead of about 36,000,000 now—our woolgrowers could not fail to produce all wools needed for carpet manufacturing.

(3) It would be no misfortune if carpet manufacturers were even limited to good grades of Cotswold, Lincoln, Shropshire, and similar wools, thus giving to those who use carpets goods of good quality, as cheap in the long run as those made of inferior wool, and thus giving to our woolgrowers a market for wool instead of patronizing foreigners. If our people patronize American carpet manufacturers, the latter should in turn patronize our woolgrowers. There should be American reciprocity. If we must have foreign wool, then for the same reasons we will have foreign carpets.

(4) The fact is notorious that no inconsiderable part of too many of our carpets are made with very little new wool, but an abundant supply of shoddy, and even cow and calf hair and cotton. Manufacturers can afford to use American wool to complete their product.

#### NO NEED OF FOREIGN WOOLS TO MIX.

The eminent wool manufacturer, Charles Fletcher, in a letter February, 1890, says: "This talk of mixing Australian wool with domestic wool to make goods required for this market is all nonsense, as Australian wools are only used here when they are cheaper than domestic wools." (Senate Mis. Doc. 35, Fifty-third Congress, second session, p. 29; Mis. Doc. 124, same session, p. 22.)

#### XVIII. CHINA WOOLS SHOULD BE IN CLASS 1 WOOLS.

1. *The woolgrowers' bill so classes them.*—The woolgrowers' bill includes China wools in class 1.

This classification is absolutely necessary to secure any fair measure of protection for any class of American wools, and especially for the wools raised from native Mexican sheep.

2. *Reasons therefor.*—(1) Historical. The ruin to American woolgrowers by the enormous imports of these wools is increased by prices so low as to defy competition.

Prior to 1869 there were no imports of China wools. Since then imports have gradually increased, as indicated by specified fiscal years, as follows:

| Year.      | Quantity.      | Value.    | Import price per pound. |
|------------|----------------|-----------|-------------------------|
|            | <i>Pounds.</i> |           | <i>Cents.</i>           |
| 1870 ..... | 9,016          | \$1,312   | 10.45                   |
| 1880 ..... | 66,751         | 9,188     | 13.76                   |
| 1890 ..... | 8,587,575      | 814,264   | 9.48                    |
| 1892 ..... | 20,753,893     | 1,812,250 | 8.74                    |
| 1894 ..... | 10,186,264     | 818,157   | 8.03                    |
| 1895 ..... | 26,089,418     | 1,699,414 | 5.15                    |

Yet this wool, at an import price of 5.15 cents per pound, is of lighter shrinkage than the average American Shropshire and other coarse wools.

American woolgrowers can not endure Chinese competition. Chinese

“cheap wool” is equally injurious to American farmers as is “Chinese cheap labor” to the wage-earning laborers of the United States. Wool is the product of labor. And this is only a sample of so-called “third-class” clothing wools.

The woolgrowers now, under the new conditions, are entitled to a change in our tariff legislation to meet them—the duty, in fact, should be 12 cents per unwashed pound; but the bill, in the interest of harmony, makes a concession to carpet manufacturers of a lower duty. Why shall not the interests of woolgrowers be consulted as well as those of the comparatively few carpet manufacturers?

With the light shrinkage of this wool and its other advantages, a duty of 12 cents will give a “protective benefit” of less than 6 cents to merino. But there are other reasons for including China wools in class 1.

(2) The proper construction of the act of 1890 so classed them. This has been shown in argument prepared by Hon. Columbus Delano and myself, which will be found in Senate Executive Document No. 3, Fifty-third Congress, special session, March 27, 1893; Senate Executive Document No. 1, Fifty-third Congress, first session; and in Senate Document No. 17, Fifty-fourth Congress, first session, page 40, December, 1895.

The average import price of all third class wools in the last fiscal year was less than 10 cents per pound. It has been proposed to make two classes of carpet wools with different rates of duty fixed by a dividing line marked by value.

MR. JUSTICE. You mean averaging less than 10 cents; you do not mean to say there was none brought in costing more?

MR. LAWRENCE. No, I mean to say if we put the dividing line at 10 cents the import value of wool will be less than 10 cents a pound, giving the benefit of the protective tariff to the foreigner by perjury and fraud through the ad valorem duty, which is the most damnable system ever created on this earth to aid rascals. That is my private opinion publicly expressed. I take it for granted that my friend, Theodore Justice, has provided a dividing line to bring in what have heretofore been called third-class wools at a duty of  $2\frac{1}{2}$  cents per pound on wools the value of 10 cents and under. The entire third-class wools imported last year came in at the import value of less than 10 cents per pound, and each pound of that wool may make nearly as much as 2 pounds of American merino, and at  $2\frac{1}{2}$  cents per pound duty the effect will be the destruction of the American industry. You might as well give us free wool at once.

(3) We can not hope for a profitable trade with China.

The balance of trade between this country and China has been uniformly against us. This is fully shown by the following table (see Senate Mis. Doc. No. 77, Fifty-third Congress, second session, p. 23):

| Year ending June 30— | Exports.    |          |             | Imports.     |             |              |
|----------------------|-------------|----------|-------------|--------------|-------------|--------------|
|                      | Domestic.   | Foreign. | Total.      | Free.        | Dutiable.   | Total.       |
| 1879.....            | \$2,651,677 | .....    | \$2,651,677 | \$12,482,082 | \$3,949,262 | \$16,431,344 |
| 1880.....            | 1,101,315   | \$68     | 1,101,383   | 17,210,237   | 4,559,381   | 21,769,618   |
| 1881.....            | 5,447,281   | 399      | 5,447,680   | 18,417,442   | 3,900,287   | 22,317,729   |
| 1882.....            | 5,895,503   | 480      | 5,895,983   | 15,899,607   | 4,314,734   | 20,214,341   |
| 1883.....            | 4,079,522   | 800      | 4,080,322   | 13,456,964   | 6,684,367   | 20,141,331   |
| 1884.....            | 4,626,480   | 98       | 4,626,578   | 11,319,710   | 4,297,083   | 15,616,793   |
| 1885.....            | 6,396,178   | 322      | 6,396,500   | 12,050,768   | 4,241,401   | 16,292,169   |
| 1886.....            | 7,518,277   | 2,304    | 7,520,581   | 15,153,473   | 3,819,490   | 18,972,963   |
| 1887.....            | 6,246,626   | .....    | 6,246,626   | 14,252,181   | 4,824,599   | 19,076,780   |
| 1888.....            | 4,581,083   | 1,502    | 4,582,585   | 10,956,022   | 5,734,567   | 16,690,589   |
| 1889.....            | 2,790,621   | 507      | 5,791,128   | 11,583,611   | 5,444,801   | 17,028,412   |
| 1890.....            | 2,943,790   | 2,419    | 2,946,209   | 11,332,805   | 4,927,666   | 16,260,471   |
| 1891.....            | 8,700,308   | 700      | 8,701,008   | 14,577,887   | 4,743,963   | 19,321,850   |
| 1892.....            | 5,663,471   | 26       | 5,663,497   | 15,936,431   | 4,551,860   | 20,488,291   |
| 1893.....            | 3,900,457   | .....    | 3,900,457   | 15,469,945   | 5,166,590   | 20,636,535   |
| 1894.....            | 5,858,488   | 3,938    | 5,862,426   | 13,348,786   | 3,786,242   | 17,135,028   |

In 1893 China imported products to the value of \$211,000,000, of which we furnished only \$7,000,000, or  $3\frac{1}{3}$  per cent. China exported the same year \$162,000,000 worth, of which the United States took \$15,000,000, or a little less than 10 per cent.

China, with her population of 300,000,000 or more, her territory including almost every climate, her wages for labor utterly insignificant, her ability to supply substantially all her own needs, can never give to us a profitable trade. But in any event our policy is to patronize the nations of the Western Hemisphere rather than China. We can not hope for a large trade with China, because Europe, through the Suez Canal, has a much shorter and cheaper route with the ports of Japan and China than has the United States.

#### XXIX. AD VALOREM DUTIES REJECTED.

The woolgrowers' bill rejects *ad valorem* duties. For this there are three different reasons:

I. A fatal and conclusive objection to *ad valorem* duties is that WHEN FOREIGN WOOLS DECLINE IN PRICE, AND THEREBY PRODUCE THE GREATER NEED OF PROTECTIVE DUTIES, THE LEAST PROTECTION IS GIVEN, AND WHEN FOREIGN WOOLS ADVANCE IN PRICE AND THE NEED OF PROTECTION GROWS LESS, THE GREATER PROTECTION IS GIVEN. "From him that hath shall be taken away even that which he hath."

Thus the AD VALOREM system is illogical. It fails to meet the needs of protection.

II. They are an inducement to the organization of trusts and combinations to depress the dutiable prices.

In the report made to the State Department by Consul E. L. Baker, dated Buenos Ayres, December 30, 1893, published in the Consular Reports for April, 1894 (Vol. XLIV, No. 163, p. 663), on Argentine trade, 1892-93, it is said:

But for the two items of hides and wools the exports from this country to the United States would be quite insignificant. In regard to the latter, the only wools which, owing to our high duties, it is possible to ship at a profit are the *long, coarse carpet wools of Cordova*. These are included in class three of the schedule, and their value being 13 cents or less per pound they are able to pay the duty of 32 per cent on the same. These wools have for many years been *annually bought up by a syndicate of Massachusetts carpet manufacturers* who thus, instead of competing with each other, get the product at the lowest possible price, and then distribute the clip by some arrangement among themselves upon its arrival in Boston.

This shows how *prices* can be manipulated in the face of *ad valorem* duties; and, in view of the rapid and *continuing increase* of sheep in other countries, the necessity for protective duties becomes all the more apparent.

As to Donskoi wools the price was equally manipulated by the same and other methods—by loans of money to flock owners, with reduction in the price of wools.

III. *Ad valorem* duties invite, abet, and cover fraud in invoices and perjury. They are demoralizing.

IV. There are now only two countries in the world whose revenue systems adopt the *ad valorem* duties, Greece and the United States.

#### THE PHILADELPHIA WOOL SECTION OF THE MANUFACTURERS' CLUB OPPOSES AD VALOREM DUTIES.

At a recent meeting of the wool section of the Manufacturers' Club the following was passed:

Whereas *ad valorem* duties can not be collected in full and are always open to fraud and undervaluation; therefore be it

*Resolved*, That this, the wool section of the Manufacturers' Club, is unqualifiedly opposed to ad valorem rates on wool, and earnestly requests that the duties to be placed on wool under the new tariff shall be specific.

The secretary of the National Association of Wool Manufacturers said of the Wilson tariff act of 1894:

That tariff effected a double revolution in the basis upon which the American wool manufacture had been built up. It not only transferred the industry from a condition of dutiable materials to free materials, but shifted it at the same time from a tariff of compound duties, in which the specific form predominated, to a tariff wholly ad valorem. *Either change* was enough to stagger ANY INDUSTRY, however well fortified; the two together were sufficient to render inevitable precisely that which has happened. (Bulletin, September, 1896.)

The conclusion is that the ad valorem system should be abandoned as the sole measure of duties.

Now I come to the so-called carpet wools, and I will state here at the outset that there is no such thing as carpet wools any more. I repeat there is no such thing as carpet wools any more. In 1867 and 1883 there were wools used for no other purpose than the manufacture of carpets, but by improvements in machinery those wools are now used in the manufacture of clothing as well as carpets. I have here presented the evidence in great abundance to the effect that these wools are used in the manufacture of clothing, and they compete with our merino wool, our long wools of the mutton breeds, and displace them. Fashion has had a great deal to do with it. You will see ladies wearing cloaks made of coarse kinds of wool. It has become fashionable, and manufacturers have made it so in order that they may manufacture goods out of these cheap foreign wools—for instance, China wools, costing only 5.15 cents per pound. We ask for a duty of 8 cents a pound on all these so-called carpet wools, and even that is very moderate. The necessity for it grows out of the change in conditions since the act of 1867 and the act of 1883—a change of conditions by which we now make clothing goods of these wools when we did not then, and without this duty we might as well give up the business of woolgrowing.

Mr. WHEELER. Is that the character of wool under the McKinley Act which was 7 cents and 40 per cent ad valorem under 15 cents, and 8 cents and 50 per cent ad valorem for those over 15 cents?

Mr. LAWRENCE. No, sir; that is manufactured goods. No; the McKinley bill, as he introduced it, provided for a specific duty on all those wools. The woolgrowers and manufacturers agreed upon a specific duty, and certain Philadelphia carpet manufacturers came over here and got the specific duties stricken out and got the duty of 32 per cent ad valorem, and the effect has been we imported more of these third-class wools than all the other class wools together. The theory of Mr. Justice to give  $2\frac{1}{2}$  cents duty on wools under 10 cents a pound will give less protective benefit than the 32 per cent ad valorem duties of the McKinley Act, for 32 per cent of 10 is more than  $2\frac{1}{2}$ .

### XXX. A DIVIDING LINE IN SO-CALLED CARPET WOOLS, WITH $2\frac{1}{2}$ CENTS DUTY ON WOOLS OF 10 CENTS VALUE.

1. *Plan of Theodore Justice*.—An eminent wool merchant, Theodore Justice, said in a letter December 24, 1896:

Wools of the first class are 1 to 2 cents below the average for the ten years ending 1894, when the McKinley law was repealed. Carpet wools are 2 cents per pound lower, showing that the 11-cent dividing line would to-day be the same as 13 cents was in 1890. I think 10 cents should be the dividing line now. Wools of the third class

worth over 10 cents should pay 8 cents per pound duty, and wools worth 10 cents or under should come in at  $2\frac{1}{2}$  cents. If the dividing line was reduced to 9 cents foreign wools would fall until they could come in under our tariff. THERE IS NO OTHER MARKET FOR THEM.

I. *Reasons why.*—This is deemed alike unjust and unwise; but little better than free wool. The objections to it are palpable:

1. It is practically the detested ad valorem system very thinly disguised, open to all its frauds (1) of undervaluation and (2) of combinations and conspiracies to make an ostensible dutiable price. This would be especially practicable as to “wools worth 10 cents or under,” as “there is no other market for them” but ours.

2. The rates proposed are in part less than the ad valorem rates that were forced into the McKinley Act. It gave 32 per cent on all third-class wools, which on wools worth 10 cents would be 3.2 cents as against the proposed duty of  $2\frac{1}{2}$ .

It has already been shown that imports of third-class wools brought more ruin to our wool industry than all others.

This is no time for a reduction of duties.

The duty of  $2\frac{1}{2}$  cents on clean wools imported at a price of 5.15 cents per pound would make them cost 7.20 cents, each pound equal clean to 2 pounds of average merino, giving a protective benefit to it of  $1\frac{1}{4}$  cents per pound.

3. These wools of the lowest price supplant the use of our American long wools, and, in fact, of all classes of our wools. Their import will defeat the purpose of our proposed clause in our bill to encourage the production of the wools of the native Mexican sheep in Texas and elsewhere.

And the imports of the *lowest price* are those which injure our wool-growers most, because they bring down the prices of all our American wools.

4. *The pretext to favor carpet manufacturers.*—If the pretext be to aid the carpet industry the answers are:

(1) It needs no such aid; and

(2) As carpets are in a measure luxuries, they are entitled to no favors over other forms of wool manufactures.

(3) The real effect, if not purpose, is to secure the cheapest foreign coarse wools for the manufacture of clothing goods to the ruin of our wool industry.

5. The import prices of all third-class wools from August 28, 1894, to June 30, 1895, was only 9.13 cents per pound. (Senate Document No. 17, December, 1896, p. 59.)

The imports of third-class wools for the fiscal year 1895 were 144,488,265 pounds, at a valuation of \$13,135,901.75, or 9.09132+ per pound. (Senate Document No. 17, December, 1896, p. 119.) This was under free wool with no motive for perjury or fraud. And if necessary to evade the tariff, even this could be reduced by perjury and fraud.

The imports of third class wools in the fiscal year 1896 were 97,921,715 pounds, at a valuation of \$9,493,035, which is 9.694+ cents per pound.

This scheme of a dividing line and the proposed rate overlooks the change of conditions since the act of 1890.

7. *Reflection on the proposition.*—If it were not for the ruin this scheme would bring to our wool industry, we might admire the ingenuity that devised it.

It is a veritable wooden horse. *Timeo Danaos et dona ferentes.* The

"Greeks entered Troy through the stratagem of the wooden horse," and now it is proposed that our country shall be deluged with China and other wools under cover of a free-trade horse bearing a flag of truce inscribed with protection which will not protect.

It is ABSOLUTELY NECESSARY to place China wool in class 1. Without this a mighty avalanche of China wool will be precipitated upon us at 6 cents per pound, to the exclusion of all or most of the other coarse wools of the world and to the ruin of our own coarse-wool industry.

Its exclusion is justified on the same ground as our acts of Congress which shut out the hordes of cheap-labor Mongolians that would crowd our country without them.

8. *A conclusive reason against a dividing line making two kinds of these wools.*—Ex-Consul-General Wallace, in the January, 1897, Bulletin, of the National Wool Growers' Association, page 18, referring to No. 1 and No. 2 wools of the third class, says:

What does the Treasury Department call No. 1 wool?

It is the experience of some and the belief of many that any wool so decidedly of merino blood that it could not be called anything else is, in the judgment of the custom-house experts, of class 1. In support of this assertion it may be stated that in December, 1889, "the wool expert"—save the mark—of the Boston custom-house exhibited to a committee of woolgrowers, a sample of wool he had passed as No. 2, third-class wool, which each woolgrower present pronounced "at the least of three-eighths merino blood." And again, in 1885, nearly 100,000 pounds of wool was shipped from Mexico to Col. A. J. Child, of St. Louis, which was passed through the custom-house at El Paso as No. 2, third-class wool, and paid 2½ cents per pound duty. That wool was sold in St. Louis at 18 cents per pound, and it was nearly full-blood merino. We may rest assured all of those millions of pounds recorded in the Treasury Department last year were of good merino combing or clothing wool. There may have been a large amount of Argentinian or Danubian wool in those importations, yet a very large proportion of them were Australian, and included light fine wool, skirted and sorted, shrinking anywhere up to 50 per cent.

### XXXI. THE DUTY ON WOOLEN RAGS, SHODDY, AND OTHER WOOL ADULTERANTS.

1. *Prohibitory duties.*—The woolgrowers' bill asks for a duty of 30 cents per pound on shoddy, woollen rags, and other wool adulterants.

2. *Amount of imports.*—The imports of these adulterants for the fiscal year 1896 were as follows:

| Article.                     | Quantity.      | Value.    |
|------------------------------|----------------|-----------|
|                              | <i>Pounds.</i> |           |
| Carbonized wool.....         | 203,561        | \$49,111  |
| Rags, noils, and wastes..... | 770,976        | 1,988,541 |
| Do.....                      | 1,900,133      | 662,696   |
| Total.....                   | 18,874,670     | 2,700,348 |

These are the figures as found in the "No. 12 Series Monthly Summary of Finance and Commerce of the United States, June, 1896," page 1528. For some reason this document does not give by *name shoddy, mungo, flocks*. And there is an item "all other;" but it is understood that shoddy, etc., are included in the above figures.

Some of these remained in Government warehouses at the end of the fiscal year.

The amounts actually "entered for consumption" are shown in the

"Imports for consumption and duties collected, 1894 to 1896," Bureau of Statistics, Treasury Department, 1896, page 296, as follows:

| Grades.                                  | Quantities.    | Value.          | Average value per unit of quantity. |
|------------------------------------------|----------------|-----------------|-------------------------------------|
| Carbonized wool:                         | <i>Pounds.</i> |                 |                                     |
| Class 1 .....                            | 89, 252        | \$24, 156. 00   | \$0. 27                             |
| Class 2 .....                            | 568            | 131. 00         | . 23                                |
| Class 3 .....                            | 5, 649         | 537. 00         | . 095                               |
| Mungo, flocks, noils, shoddy, and waste: |                |                 |                                     |
| Garneted and carded wastes .....         | 28, 177        | 2, 922. 00      | . 10                                |
| Mungo and flocks .....                   | 11, 831        | 3, 211. 00      | . 27                                |
| Noils, carbonized .....                  | 62, 526        | 11, 379. 00     | . 18                                |
| Noils, not otherwise provided for .....  | 1, 185, 032    | 232, 150. 00    | . 19                                |
| Rags, woolen .....                       | 11, 116, 402   | 643, 945. 50    | . 058                               |

| Shoddy .....                             | 139, 931       | 12, 873. 00     | . 092                               |
| Total mungo, flocks, noils, etc. ....    | 13, 786, 829   | 1, 369, 521. 50 | . 07                                |

(See Senate Document No. 17, December, 1896, p. 111; Senate Document No. 17, December, 1895, p. 157.)

The existing law encourages the import of foreign rags, shoddy, waste, flocks, etc. For the last fiscal year of the McKinley tariff only 143,002 pounds of shoddy, rags, waste, etc. were imported. For the fiscal year of 1895, and almost wholly during the ten months of the new tariff, 14,027,914 pounds of like shoddy and wool substitutes were imported, an increase of over 1,000 per cent, as follows:

| Material.                   | Pounds.      | Value.        |
|-----------------------------|--------------|---------------|
| Rags .....                  | 6, 503, 346  | .....         |
| Waste .....                 | 6, 104, 031  | .....         |
| Noils .....                 | 1, 110, 149  | .....         |
| Carbonized wool .....       | 128, 856     | .....         |
| Shoddy, mungo, flocks ..... | 121, 532     | .....         |
| Total .....                 | 14, 027, 914 | \$2, 034, 218 |

The imports of rags, waste, shoddy, etc., were, for the years ended August 31—

|            | Pounds.      |
|------------|--------------|
| 1894 ..... | 210, 404     |
| 1895 ..... | 17, 666, 563 |

This is the effect of FREE rags, etc.

The rags are imported to be manufactured into shoddy to be used as an adulterant, as are flocks, waste, etc., in the manufacture of woolen goods. These adulterants are sometimes called "redyed wool," to cover up their fraudulent character, and the goods made from a combination of these with wool are called "all wool goods."

3. *How this injures American woolgrowers.*—The imports of these adulterants are:

- (1) Injurious to woolgrowers, and
- (2) Can be used to operate as a fraud on the consumers of wool manufactures.

A wool circular of Justice, Bateman & Co., says:

Every pound of shoddy, noils, and waste displaces about 3 pounds of American unwashed wool. The excess of importations of shoddy, rags, noils, waste, etc., in

one year under the new law exceeds the total annual yield of clean wool of two of our largest woolgrowing States, California and Texas, or the total annual yield of Ohio, Michigan, and New York. Nearly 90 pounds of shoddy, noils, waste, etc., now go into consumption where only 1 pound was used before the duties were taken off.

The Philadelphia Press of November 2, 1895, says:

The wool contained in all forms of waste is washed and scoured wool, and most of it has been one or more times spun, woven, and, in the case of shoddy, worn out, and perhaps respun and rewoven and reworn out.

While these facts deprive the wool of its staple or length, destroy its adhesive "kink," and render the cloth which is made of it relatively "rotten" and worthless, at least so far as it is used in the way of warp, they do not deprive it of the advantage it possesses relatively to new wool of having been washed and scoured, and therefore counting each pound as 3 pounds in its rivalry with unwashed and unscoured wool in the quantity of cloth it will make. Hence every pound of these "wastes" displaces 3 pounds of American wool in the quantity of cloth it will make, and only 1 pound of American wool in the length of time the cloth will wear. The real price of the shoddy for each pound of the raw wool which has entered into it is therefore only 4 cents a pound, instead of the 12 cents which the Record thinks makes it so respectable.

American farmers and the American Congress are likely to say before long whether 4-cent wool in 12-cent shoddy is the sort of stuff which they care to see substituted for American flocks. What it will mean in clothing will be that American working men and women will soon be clad in woolen clothing which will fall off their backs in the first rain. General Sherman declared that this was the kind of clothing the free-trade tariffs of 1846 and 1857 gave the soldiers when they first went into the Army in 1861. But by the time the war closed, he said, they were all clad in American woollens, made of American wool, which would defy a hundred storms.

Now in reference to shoddy: The low price of foreign wools has induced a vast increase in the use of shoddy in the United States in order to enable our wool manufacturers to maintain their wool manufacturing. I will just read you what is said by Collings, Taylor & Co., manufacturers in Cleveland, as to the effect of free wool and the use of shoddy: We imported last year over 18,000,000 pounds of shoddy, equal to 54,000,000 of wool, for each pound of shoddy is equivalent to 3 pounds of merino wool, which would make the imports of 18,000,000 equal to 54,000,000 pounds of wool, and 54,000,000 are more than the entire wool crop of the three largest States of this Union. We are destroying our wool product equal to that of three of our American States by importing foreign rags and filth.

In August, 1896, Collings, Taylor & Co., wool manufacturers of Cleveland, said in a published letter:

During the years 1890 to 1895, we bought nearly all of our wool from the Ohio farmers, and paid in the neighborhood of 27 to 28 cents for washed fine. To-day we can buy for 14 to 15 cents, but the trouble is we have no use for it, for since the Wilson-Gorman bill came into effect, we have not been able to pay the existing low prices for wool, but have had to resort—like a great many other mills—to the purchase of foreign rags, of which we have purchased hundreds of tons, and worked them up, displacing just so many pounds of Ohio wool. We had to do it in order to compete with the cheap goods being imported into this country since the Wilson-Gorman law came into effect. We will also say that previous to the Wilson-Gorman bill, or during the McKinley law, we never purchased a single pound of foreign rags, waste, or wool, and during the McKinley law our mills never stopped one day for being short of work, but since the Wilson-Gorman law came into effect it has been very hard to keep the mills running three days per week, and for the last two months we have not run more than one day in each week, or, in other words, we are practically shut down, with no prospect of work until after the election, and we look for little then, unless our tariff laws are changed. (Senate Document No. 17, December, 1896, p. 31.)

Some shoddy may, perhaps, be properly used for the manufacture of inferior cheap goods; but, if so, American rags can supply all that should be used.

The conclusion seems reasonable that foreign rags, shoddy, etc., should be excluded by *prohibitory duties*.

## XXXII. OTHER PROVISIONS OF THE WOOLGROWERS' BILL.

There are other provisions of the woolgrowers' bill. These and most of its provisions are somewhat discussed in Senate Document No. 17, December, 1896, chapter VII, pages 117-132.

I presume you know what wool tops are?

Mr. DOLLIVER. No.

Mr. LAWRENCE. They are scoured wool which is carried into the first form of manufacture, put into great long rolls ready to spin. They are better than scoured wools because they have passed beyond the scouring stage to the first process of manufacture. I saw a circular here, I have forgotten whether it was from Philadelphia or New York, asking that wool tops be put at the same duty as scoured wool. Well, the injustice of that must be apparent. Of course no scoured wool would come in. It would be all tops, and thus the law would deprive our American manufacturer of the privilege of making tops from foreign wool, and—

Mr. EVANS. Made out of what quality of wool?

Mr. LAWRENCE. It is wool first scoured and then manufactured into a roll ready to spin. They are made from all classes of wools.

Mr. JUSTICE. There is a sample of it [exhibiting same].

Mr. LAWRENCE. There it is, and its import has aided in ruining our wool industry and taken from American citizens the labor of making tops and deprived them of wages for this service. And yet these gentlemen come here who sent the circular and ask that tops be dutiable simply as scoured wool.

A BYSTANDER. There is a duty now of 20 per cent.

Mr. LAWRENCE. I do not remember what it is. We want a duty of 40 cents a pound, and we want to manufacture it and let our American citizens make the tops and let them have the wages therefor. Why transfer American gold to foreigners to make those tops? Let us have protection, and protection which protects. We ask for a prohibitory duty upon foreign rags and shoddy. That strikes the common sense and common honesty and common conscience as proper and just, as it seems to me.

Mr. DOLLIVER. Was the 30 cents a pound under the act of 1890 prohibitory?

Mr. LAWRENCE. No, not quite; but we ask for a prohibitory duty upon wool tops as well as shoddy sent here from foreign countries.

Mr. DOLLIVER. Do you ask for a prohibitory duty, or a duty larger than 30 cents a pound?

Mr. LAWRENCE. I would like to have it a little larger than that to make it prohibitory.

XXXIII. WOOLGROWERS WANT SOME PROVISIONS IN THE SCHEDULE  
"WOOL MANUFACTURES."

## WOOL TOPS.

Wool tops are partially manufactured wool. They should be excluded by prohibitory duties for the double purpose:

I. Of giving to American citizens the employment and wages afforded in their manufacture, and

II. Of giving protection to American woolgrowers.

## FOREIGN WOOL MANUFACTURES HAVING THEREIN SHODDY SHOULD BE STAMPED TO INDICATE THEIR CHARACTER.

Imported woolen or worsted manufactures, in which shoddy or other adulterants are a component part, should be stamped, to indicate their character, and should be forfeited if not so stamped.

For this there are two reasons:

I. This will prevent fraud in sales as to PRICES. Shoddy goods should not be palmed off on purchasers as all new wool, with PRICES accordingly.

II. This will prevent fraud in the quality of the goods. Purchasers have a right to know WHAT they buy.

## PREVENT A FLOOD OF IMPORTS IN ADVANCE OF A PROTECTIVE TARIFF.

1. *Reasons therefor.*—Large imports of wool or wool manufactures in advance of a protective tariff, which it is evident must soon come, should be prohibited for two reasons:

I. They will supplant the use of American wool and manufactures.

II. They will enable importers to secure the enhanced price resulting from the tariff—a speculative profit never earned—worse than the “unearned increment of wealth.”

2. *How?*—This can be done by an act or joint resolution passed at an early day in the coming extra session of Congress, providing that all imports after an early fixed date shall be dutiable under the provisions of the first general tariff law enacted during the existence of the Fifty-fifth Congress, and that no goods imported shall be withdrawn for consumption except upon payment of existing duties, and the execution of a bond with sureties approved by the collector of the proper port of entry for the payment of any additional duties prescribed in the new tariff act.

The act of August 27, 1894, took one step in the right direction—it made all goods dutiable under its provisions which were withdrawn for consumption after it became a law.

## CORRECT AN ERROR.

In the woolgrowers' tariff bill as printed in Senate Document No. 17, December, 1896, page 184, the words occur:

All other wools having less than 40 per cent of grease \* \* \* shall be deemed washed.

It should read “25 per cent” instead of “40 per cent.”

## XXXIX. CONCLUSION.

I conclude with a few considerations pertinent to and supporting the policy of the most ample protection for the wool industry.

1. *Utilize our pasturage.*—Ours is a vast agricultural country, with unmeasured millions of acres of unoccupied pasturage adapted to sheep husbandry, wasting “its fragrance on the desert air,” and, with its unbounded wealth which can be utilized for no other purpose. Give us the woolgrowers' bill and it will be utilized.

2. *Depression in agriculture aggravated by free wool.*—Ours is an agricultural country, with vast overproduction of cereals, of hog and cattle meats, of horses and hay, with no remunerative foreign market, and with a home market ruinously depressed in price.

Mortgaged farms and sheriffs' sales and homes made desolate and bankruptcy send their agonized cries for relief to the American Congress.

These evils are vastly aggravated by the importation of foreign wools and Canada mutton and other sheep.

3. *Ruin by importing Canada mutton.*—"All flesh is grass," and Canada mutton sheep bring with them unwelcome, unneeded Canada grass.

We ask a market for American grass and American mutton, and we will not be satisfied if you give us a Canada stone.

As to PROPER DUTIES ON SHEEP, SEE Senate Document No. 17, December, 1895, pages 177-180.

4. *The ruin of free wool to our market for hay, corn, and oats.*—Australian wool is Australian grass, which comes to continue unutilized our own grass, and, still more, it brings a DOUBLE RUIN—it deprives our superabundant crops of hay, corn, and oats of the market which a needed number of American sheep would supply. (See especially Senate Miss. Doc. No. 35, Fifty-third Congress, second session, January, 1894, Chap. VI.)

5. It robs our labor of the privilege of producing them and the sheep to consume them and the wool they would bear. No wonder that the children of unemployed, despondent fathers and heart-broken mothers are crying for bread.

And yet ingenious contrivances and schemes in the garb of protection are here urging you to give them a stone!

They can live without carpets, but not without bread. Protection for sheep husbandry will give them bread, and still more, opportunities to earn the means to buy homes and cover their floors with carpets, and bring contentment where now dwells starving misery.

In return for this, under free wool, the Government does not even receive revenue.

The Spanish Government has recently prohibited the growth of tobacco in the abundant lands of that country adapted to the purpose, in order that her people may be taxed to raise revenue, with import duties on tobacco from downtrodden, ill-fated Cuba.

This inhuman scheme, blind to the ruin it will bring to Spanish industries and people, first deprives them of one great opportunity for utilizing their lands and of earning the means of living, and then it takes a large measure of what they can earn in other industries to pay the taxes so injuriously, unwisely imposed, instead of giving them the means of paying needed revenues from utilizing the industries adapted to Spanish soil.

This is "burning the candle at both ends." And this is precisely in effect the scene brought to our land and people by free wool, and which, even now, some professed friends of protection would continue hereafter.

Inadequate protection for wool is no better than free wool. Protection that does not protect is a sham, a fraud, a delusion, and a snare.

It is the unwisdom with which Spain supports Weyler, and it will bring Weyler destruction to our agricultural industries. Its wisdom is that of "carrying coals to Newcastle."

We want protection that protects; protection that will give revenue until our flocks shall be increased sufficiently to supply all needed wools, and then we want protection that will prohibit, and when that time comes our ability to pay revenue will be enlarged from all needed sources, and blessings will cover the whole land.

The inquiry has been made: "How can we prevent the vast flood of imports pending the consideration of the tariff bill?" I think Congress can adopt a measure by which it can be done. As I have not taken out

a copyright on it I will distribute it here; and, in brief, it is this: I suggest, in the first week of the extra session of Congress, you pass a bill which shall provide that after a certain day to be named—say, after twenty days from the passage of the bill—all foreign goods imported into this country shall pay all existing duties, whatever they may be, and that they shall not be withdrawn for consumption until the importers give bond with sureties to the satisfaction of the collector of the proper port to pay any additional duties that may be enacted in any bill which may be passed during that session of Congress.

The CHAIRMAN. The Senator from Montana states that possibly the Senate may pass that bill by the 1st of next October?

Mr. LAWRENCE. If the Senator from Montana will allow me to say, we would advise the Senate to pass it the first week of next session. All I can do is to point out the mode, and if it is not adopted the fault will not be mine. If I am in error, of course the plan will not be adopted.

Mr. TAWNEY. There are several questions that I would like to ask for information in regard to the ultimate effect of an increase of duties. You say an increased tariff would increase the price of wool?

Mr. LAWRENCE. Yes, sir.

Mr. TAWNEY. You also say it is your judgment that within a period of four years—

Mr. LAWRENCE. Four years after the protective benefit of the new tariff law will take effect; that is, for the first year—

Mr. TAWNEY. I understand you—that we would then produce all the wool that we then would need?

Mr. LAWRENCE. Yes, sir.

Mr. TAWNEY. What would be the ultimate effect of producing all the wool we need upon the price of wool? Would it continue at the price with the increased tariff or gradually reduced?

Mr. LAWRENCE. When we are occupying the position of producing all the wool we need—and I will say we have in our bill a provision for annually increasing the rate of duty with a view of reaching a time when the duties shall be prohibitory—the effect will be, the prices of American wool will be fair prices as compared with other industries, as all others will generally be fair, the prices depending upon the supply and demand. The tariff will not affect them at all. They should be prohibited as they ought to be, for whenever there is any article in this country which we can produce at a fair price and in sufficient amount to supply all our needs there is no reason why we should import any of them.

Mr. TAWNEY. That rests upon the assumption then that we will not soon produce all we want, and we would necessarily produce a surplus, which would have a tendency to regulate the price to make it reasonable?

Mr. LAWRENCE. Yes, sir; I do not mean to say we would export wool, but I do mean to say in one year we would probably produce a surplus and probably it would be carried over to the next year, and the number of sheep would regulate itself just as the amount of wheat we produce is regulated. One year we produce too much wheat and the price goes down, and the next year we produce less. One year we may produce too much wool, and thereupon we will fatten an amount of our wool-growing sheep in April and sell them more than we otherwise would until we get the product down just to meet our needs.

Mr. DALZELL. Have you any estimate of the effect of this proposed tariff rate on the revenues; how much revenue it will produce?

Mr. LAWRENCE. Oh, it will bring—no, I have not computed that—but it will bring a little more than the McKinley Act did. I think the revenue was about \$8,000,000 a year, if I remember.

Mr. TURNER. And you propose it be prohibited?

Mr. LAWRENCE. Only when we are able to supply our wants. Between this period and the period when we are able to supply all of our wool we will be getting from \$8,000,000 to \$10,000,000 a year, probably \$10,000,000 a year. That would be the condition.

Mr. WHEELER. And finally we will get none?

Mr. LAWRENCE. And finally we will get no revenue. Why should we want any other wool when we have an adequate supply here? We will put the duty on other things, and by that time our increased wealth and our increased ability will be such that we will be able to pay revenues from other sources. A protective duty will give prosperity to the whole country, because it will relieve the overproduction of wheat and other cereals to some extent, and reduce the amount——

Mr. STEELE. If you give a tax on wool you must also give a compensating tax on the manufactured article?

Mr. LAWRENCE. Yes; of course.

Mr. STEELE. Now, have you been able to fix a schedule by which you can have a specific duty on the manufactures of wool?

Mr. LAWRENCE. I have not undertaken to fix a compensatory duty on wool manufactures. I have proceeded upon the theory that the wool manufacturers would see to that and advise you on that. I have proceeded upon the theory that we woolgrowers would leave wool manufacturers to consult with you as to that, just as we think they should leave us to consult with you as to wool duties.

Mr. STEELE. Have you ever heard any suggestions in that respect?

Mr. LAWRENCE. Oh, yes; there is a rule that the compensatory duty should be about three times the duty on the wool or something more.

Mr. STEELE. How are you going to fix a specific duty?

Mr. LAWRENCE. Just as we did in the McKinley Act.

Mr. STEELE. How is the manufacturer to figure it out?

Mr. LAWRENCE. The protective duty in the McKinley Act was ad valorem and the compensatory duty was a specific duty.

Mr. WHEELER. What effect would this increase of tariff have upon the ordinary common cheaper woolen clothing?

Mr. LAWRENCE. The effect of this tariff would be for a time to increase the cost of clothing. It would also increase the ability of the people to buy. It will increase the ability of people to buy more than the increased cost of the product.

Mr. TURNER. What was the effect of the McKinley Act, which, I think, was prepared somewhat under your advice? Was that a disappointment or not?

Mr. LAWRENCE. It was a disappointment; but several of its provisions were against my advice or consent. The effect of the McKinley Act was that the prices went down and down under it, and in Texas sheep declined in numbers; and sheep increased in some States, not so much because the McKinley Act was sufficiently protective, but it was based upon a hope which was deferred. Now, that is a fact, the McKinley Act was not sufficient.

Mr. TURNER. The duty of 11 cents on unwashed wool was not high enough?

Mr. LAWRENCE. No, sir; not with the skirting clause in the act, and with its ad valorem duties on third-class wools.

Mr. TURNER. And you think it was not high enough correspondingly on the washed and scoured?

Mr. LAWRENCE. If it had not been for the skirting clause, and the fact of the light shrinking of Australian merino, and with adequate

specific duties on third-class wools, we could have got along under the McKinley Act under conditions then existing; but since then the conditions have changed. The world's price for wool has declined, and it is now necessary to have a larger duty than under the act of 1890.

Mr. TURNER. On the basis of unwashed wool you propose a duty of 12 cents?

Mr. LAWRENCE. Yes, sir; on the wools embraced in classes 1 and 2 of the act of 1890.

Mr. TURNER. And 24 cents on the unwashed Australian wool of a special class?

Mr. LAWRENCE. Yes, sir; because it will shrink in scouring less than the *washed* wools of the United States and other countries.

Mr. TURNER. And on washed wool what do you propose?

Mr. LAWRENCE. Doubled, just as all the other acts provided as to merino wool.

Mr. TURNER. And on scoured wool you propose three times as much?

Mr. LAWRENCE. Yes. The acts of 1867, 1883, and 1890 all provided for that, and we do not change that.

Mr. TURNER. As to the protective duties which are put to compensate the manufacturers for the duty they have to pay on wool, do you know whether or not it is settled in the minds of those who are concerned in this business that about the same ratio of compensation shall be provided for in this bill? You can not speak for them?

Mr. LAWRENCE. No; I can not speak for them; but I would say in my judgment the wools imported would be substantially all imported unwashed.

Mr. TURNER. What would be the effect of your rates of duty calculated upon the conditions which you have stated upon our imports of Australian wool and other foreign wools?

Mr. LAWRENCE. The imports of Australian wool would be reduced, but they would still come in to supply the necessary demand——

Mr. TURNER. Have you not really graduated this duty with a view to exclude those wools? Be candid about it.

Mr. LAWRENCE. Not with a view to exclude them, because I know they would still come in to some extent, but less than they now do, to supply the demand for the kind of goods which that kind of wool will make. My idea is, that if an American citizen will have a foreign article of a particular style, which is merely style, and not utility, it should in some measure be deemed a luxury, and, as I have stated before, they ought to be willing to pay a luxurious price for it. Under the woolgrowers' bill there would be less imports of Australian merino than under the act of 1890, and more than under free wool, but the deficiency would be supplied by imports from Argentina. One object of our bill is to transfer wool purchases from Australia to Argentina.

Mr. TURNER. To pursue your argument further on the line which you stated just now; really and candidly stated, you have endeavored rather to protect the woolgrowers than to replenish the Treasury?

Mr. LAWRENCE. During the first four years after the woolgrowers' bill should become a law its operative effect would be to replenish the Treasury more than a lower duty would be. By that time I think we could supply all needed wools, and then our policy should be to exclude all foreign wool. We would then not need any foreign wool. We could then raise additional revenues from some other sources. From that time we will not need as much revenue probably as we do now, because the pension list will be reduced.

Mr. TURNER. If you restrict the imports of wool under the conditions you name, you will necessarily have to place restrictive duties upon the imports of woollen goods, and where is our revenue to come from?

Mr. LAWRENCE. All the wool we need will come in until our domestic supply shall be adequate to supply all needs. We must have a certain amount of wool and woollen goods, and all foreign wool which we need to supply the deficiency of our clip would come if the duty was 16 cents a pound. We will have clothing, sir, no matter what the duty is. So soon as our manufacturers can supply all needed wool manufactures then our policy should be to impose protective duties to exclude all foreign manufactures, unless domestic manufacturers should charge exorbitant prices. Then, of course, we would look to other abundant sources of revenue.

Mr. TURNER. What is the price of Ohio wool now 3 X, 18 to 20 cents, washed wool?

Mr. LAWRENCE. The Ohio fleece XX is not a fair test of what the price should be. It is above the average in value.

Mr. TURNER. I do not care to be particularly accurate.

Mr. LAWRENCE. The farm value of Ohio unwashed average merino wool is not over 10 cents. The total farm value of all our wools last year, as the secretary of the National Wool Manufacturers' Association shows, was only 8 cents a pound. In Senate Mis. Doc. No. 17, of the present session of Congress, pages 108 to 111, the Philadelphia prices of all domestic wools are given for the years 1891 to 1896, inclusive.

Mr. TURNER. You say it is 10 cents; that is a surprise to me from your estimate of it.

Mr. LAWRENCE. I am speaking of the farm value.

Mr. TURNER. That is a surprise to me too.

The CHAIRMAN. I will state that the hour for the House to meet is within five minutes.

Mr. TURNER. I would like to finish the line of investigation if I may be permitted, but I do not care, of course, to inconvenience the committee. At what price would you expect to put that same grade of wool by your bill?

Mr. LAWRENCE. We ought to have the price of wool in Ohio at 30 cents a pound for washed merino; but our bill, if enacted into law, would make it about 25 cents.

Mr. TURNER. But this grade of wool you say whose farm value was 10 cents a pound, at what price would you expect to put that wool under your bill?

Mr. LAWRENCE. You mean the washed or the unwashed?

Mr. TURNER. The kind you spoke of as being worth only 10 cents to the farmer?

Mr. LAWRENCE. I should expect to make it—it ought to be made in order to be fairly compensatory—30 cents for the washed wool. This would make it but little over 20 cents for washed merino, which now commands 10 cents per pound farm value.

Mr. TURNER. Do you mean to say washed wool is worth only 10 cents to the farmer now?

Mr. LAWRENCE. I can give you here in one moment exactly the prices.

Mr. TURNER. There was a grade of wool you said is now worth 10 cents a pound to the farmer under the present conditions. What grade of wool did you have in mind?

Mr. LAWRENCE. Merino wool.

Mr. TURNER. Unwashed?

Mr. LAWRENCE. Yes, sir.

Mr. TURNER. At what price do you expect to put that by your bill? It is a simple question?

Mr. LAWRENCE. I have mislaid the document which gives prices, but our bill would make Ohio unwashed merino about 20 cents and the merino of Texas and the Rocky Mountain region about 16 cents per pound.

The CHAIRMAN. Perhaps while you are looking, it might be well to state, that it appears from the official statistics that 117,000,000 pounds of first-class wool was imported last year, about 86,000,000 from Australia.

Mr. RUSSELL. And on that you suggest a duty of 24 cents a pound?

Mr. LAWRENCE. I had a document over there, Document No. 17 of the present session of Congress, but I do not yet find it.

Mr. TURNER. Could you not answer that question without referring to any documents?

Mr. LAWRENCE. No, sir; I would rather be accurate.

Mr. TURNER. Have you any document as to what would be the effect of your bill?

Mr. LAWRENCE. Yes, sir; it is all in this document here. I will give you the farm value now in a moment. Here it is. Here is a statement prepared by Mr. Theodore Justice, and he gives the farm value of the Ohio wool, July 1, 1896. Ohio XX fine washed fleece, 14 cents; Michigan and Wisconsin X fine washed, 12 cents; Ohio fine unwashed, 9 cents.

Mr. TURNER. Now, answer my question, if you please. At what price do you intend to put that 9-cent wool by your bill?

Mr. LAWRENCE. The 9-cent wool would not command more than 20 cents under our bill.

Mr. TURNER. You mean on the farm?

Mr. LAWRENCE. Yes, sir.

Mr. TURNER. But now to the manufacturer?

The CHAIRMAN. Now, putting that duty at 12 cents and the wool costing 9 cents abroad?

Mr. LAWRENCE. The free-wool farm price of Ohio XX fine unwashed, July 1, 1896, was 9 cents per pound—that is, the free-trade price. We want such a duty as will bring that kind of wool at least up to 20 cents.

Mr. TURNER. Your bill is a scheme to put up to the consumer the price of necessary articles in the proportion of more than 100 per cent?

Mr. LAWRENCE. Yes, sir.

Mr. TURNER. Twelve cents increase or 11 cents increase on an article that is only worth 9 cents under free-trade conditions?

Mr. LAWRENCE. The lower the price the greater the necessity for the protective tariff to give protection, and our object is to put up the price of wool thereby giving prosperity to American industries and increase the ability of the American people to buy all they need, and give them benefits over and above the increased cost of their clothing.

Mr. TURNER. But your theory would apply only to those who have the benefit of that increased taxation?

Mr. LAWRENCE. I submit that the farmer who owns no sheep is quite as much interested in wool protection as the farmer who has sheep, because as you increase the number of sheep you increase the demand for oats and hay and corn to feed them. I met the editor of the Omaha Bee here a year ago in December and he said there were then 70,000 sheep, driven in from Wyoming, within 40 miles of Omaha to be fed on grain and hay raised on farms within that region, and the farmers who produced the hay and grain did not own a single sheep.

Mr. TURNER. And yet you propose to tax these farmers in return for what you propose to consume of their hay and oats over 100 per cent on the wool they consume?

Mr. LAWRENCE. I propose to increase them on the cost of clothing, and for every \$5 of increased cost thereon, they would receive other benefits more than \$25.

Mr. TURNER. Would it not be fair to consider that matter reciprocally, and ought not the wool men to do the same to the hay and oats and corn men?

Mr. LAWRENCE. The hay and oats men will get better prices the more wool we grow, and with low duties we will not grow much wool and hence would not make so large a market for the hay and oats men.

Mr. TURNER. So, to state the argument broadly, as between you and myself, have you thought of distributing the beneficence of this protective system among all the people of the United States who may be benefited; if every man got an equal share, would that be any advantage?

Mr. LAWRENCE. A wool tariff will give protective benefits to the entire population of the United States. I have shown you how it protects the farmer who has no sheep. Now, the farmer who has no sheep gets the benefit of this and they have that much more with which to erect buildings, and that gives employment to the carpenters. I know a farmer who prior to the free-wool act made his arrangements to buy \$2,000 worth of tiling, but when free wool came he canceled his order and the tile manufacturer lost the benefit as well. I am the man.

Mr. TURNER. How many flock masters are there in the United States?

Mr. LAWRENCE. There were about a million, but they were greatly reduced in number by the free-wool act.

Mr. TURNER. And they would average about how many sheep?

Mr. LAWRENCE. The average would be probably 50.

Mr. TURNER. Are not the increases of the sheep herds, if it took place in the last twenty years, rather west of the Mississippi River?

Mr. LAWRENCE. Sheep increased faster West than East, but we produced different classes of wool. You must have such wools as are produced in Michigan, Pennsylvania, and Indiana. They are different in character from the far West wools.

Mr. TURNER. What factory was that running night and day in Cleveland?

Mr. LAWRENCE. Collings, Taylor & Co.

Mr. WHEELER. You say that the cost of freight from Australia is half a cent a pound?

Mr. LAWRENCE. Yes, sir.

Mr. WHEELER. And the Australians take nothing from us. What kind of cargoes go back in these ships?

Mr. LAWRENCE. I did not mean to say Australia took nothing from us. They take something, but they will not, permanently, in the future take anything like as much from us as we take from them. The fact is, most of the wool is bought in London. It is generally first shipped to London and then shipped here. We buy very little direct.

Mr. WHEELER. The superiority of the Australian wool is due entirely to the climate, or is it partly due to the careful breeding and raising of sheep?

Mr. LAWRENCE. In the first place, the wool is not superior. Its fiber is not as good as the Ohio wool, but it is of a soft character, and the luster is due to the climate, and not to breeding, because the Australian

sheep are simply American sheep. Their wool is bred from American bucks.

Mr. WHEELER. You say that sheep have fallen off since 1883. Is not it true that all staples have fallen off in value in about the same proportion?

Mr. LAWRENCE. Not in the same proportion, but all staples have fallen off to a large extent for reasons which I think I understand and I think you understand.

Mr. WHEELER. You say you want to raise the price of wool to 20 cents. Is it not true that  $13\frac{1}{2}$  cents duty on Australian wool would do that?

Mr. LAWRENCE. No, sir; because they have an advantage in the shrinkage, they have the advantage in the less cost in reaching the market, and their wool will command better prices than wool from Ohio of better fiber and of greater real intrinsic value.

Mr. WHEELER. You say it costs 9 cents abroad and one-half cent to get it to Boston— $13\frac{1}{2}$  cents make it, allowing 3 cents to carry your wool from Ohio to Boston?

Mr. TURNER. In regard to the Cleveland factory, about which I inquired and about which you referred to just now, do you not know that the firm does not use any American wool, but uses only shoddy?

Mr. LAWRENCE. They use American wool to mix with their shoddy.

Mr. TURNER. But it is a shoddy factory?

Mr. LAWRENCE. It is a shoddy factory, but they use American wool to mix with their shoddy, so they make a demand for wool. Shoddy made out of American rags and with some American wool mixed with it is a proper thing to have to furnish a very cheap article of goods, and the more Ohio wool they mix the better the shoddy will be.

Mr. TURNER. You say that after awhile the rate of duty you propose would finally cut off the imports of wool altogether?

Mr. LAWRENCE. Not the rate which we now propose, but an increased rate would.

Mr. TURNER. Do you say within five years your scheme would operate as a prohibition?

Mr. LAWRENCE. Not the present rates we ask for, but our bill proposes to gradually increase the rate annually so at the end of about five years, when we will be able to supply all if that scale be adopted, our bill, if present conditions continue, would substantially prohibit imports.

Mr. TURNER. I did not catch the annual increase.

The CHAIRMAN. Does your bill propose to increase the duty 1 cent each year?

Mr. LAWRENCE. I think it is half a cent.

#### THE WOOL TARIFF PROPOSED BY SAMUEL LEE & CO., PROMINENT WOOL DEALERS OF PHILADELPHIA.

The woolgrowers have friends among wool dealers, as shown by the following:

SAMUEL LEE & CO., WOOL AND COMMISSION MERCHANTS,  
No. 14 NORTH FRONT STREET,  
Philadelphia, January 12, 1897.

DEAR SIR: The duty wanted on wool is 12 cents on fine unwashed, double duty on washed, and treble duty on scoured; on China wool, 12 cents duty; on Bagdad wools, 10 cents; on noils, 20 cents; on ring waste, 20 cents, and rovings, 30 cents.

We remain, yours, truly,

SAMUEL LEE & CO.

Hon. WILLIAM LAWRENCE.

PHILADELPHIA, February 5, 1897.

DEAR SIR: There is one thing I wish to call your attention to in a duty on wool. Be sure and have the same duty on washed, combing, and clothing wool—no 12 cent on one kind, and 22 cents on the other kind.

Yours truly,

SAM'L LEE.

Hon. WM. LAWRENCE.

It is regretted that some others, wool dealers, are opposing duties deemed necessary by woolgrowers.

It will be seen from the quotations of wool prices above given that Bagdad wools are worth from 6d. (12 cents) to 7½d. (15 cents). These are good clothing wools, each pound producing as much clean wool as 2 pounds of unwashed merino, and they should in fact pay a duty of at least 12 cents per pound. Under the woolgrowers' bill they would only be dutiable at 8 cents per unwashed pound.

HOW SHEEP DECLINED IN NUMBER IN TEXAS UNDER THE INADEQUATE PROTECTION OF THE WOOL TARIFF IN THE ACT OF OCTOBER 1, 1890.

*Texas sheep and wool statistics.*

## STOCK.

[From official reports of comptroller of State of Texas.]

| Year. | Number of sheep. | Valuation. | Average per head. | Increase in number. | Decrease in number. | Increase in valuation. | Decrease in valuation. |

## WOOL INDUSTRY OF THE UNITED STATES—THE INJURY INFLICTED ON IT BY THE FREE-WOOL ACT OF 1894—THE REMEDY FOR THE RUIN IT BROUGHT.

*For the Manufacturer:*

The wool-tariff act of March 2, 1867, gave adequate protection to our chief wool product under conditions then existing. Under it the prices of wool were fairly remunerative. Sheep increased from 28,477,951 in 1870, producing 100,102,387 pounds of wool, to 50,626,626 in 1884, producing 308,000,000 pounds. In four years—from January, 1880, to January, 1884—sheep increased in number 24 per cent.

Then, unfortunately, came the tariff act of March 3, 1883, reducing wool duties. Under it sheep declined in number from 50,626,626 in 1884, with a wool clip of 308,000,000 pounds, to only 43,431,136 in 1891, producing 285,000,000 pounds.

In view of the injury resulting from the reduction, the tariff act of October 1, 1890, known as the McKinley law, increased the duty on wool, and American flocks grew in number to 47,273,553 in 1893, producing 348,538,183 pounds of wool.

Then again in the midst of prosperity came disaster. With the result of the election of 1892 came the certainty of free wool, subsequently enacted in the Wilson-Gorman tariff act of August 28, 1894.

The following table shows the ruinous effect of this act, resulting in a loss to flock owners of \$178,793,121, with items thus:

| Year.      | Number of sheep. | Value.        | Loss on value of sheep. | Number pounds wool. | Farm value.* | Loss on wool. |
|------------|------------------|---------------|-------------------------|---------------------|--------------|---------------|
| 1892.....  | 44,938,365       | \$116,121,270 | .....                   | 333,018,405         | \$47,185,283 | .....         |
| 1893.....  | 47,273,553       | 125,909,264   | .....                   | 348,538,138         | 23,164,040   | \$24,021,243  |
| 1894.....  | 45,048,017       | 89,186,110    | \$36,723,154            | 325,210,712         | 22,122,528   | 25,062,755    |
| 1895.....  | 42,294,064       | 66,685,767    | 22,500,343              | 294,296,726         | 23,543,738   | 23,641,545    |
| 1896.....  | 36,464,405       | 61,989,488    | 4,696,279               | 270,474,708         | 20,800,000   | 26,385,283    |
| Total..... | .....            | .....         | 63,919,776              | .....               | .....        | 99,110,826    |

\*The wool product for 1892, 1893, and 1894 is based on the estimates as given by eminent wool merchants in North's Wool Book for 1895. The secretary of the National Association of Wool Manufacturers says the farm value of wool in 1896 "will not exceed 8 cents a pound," reducing the total value to \$20,800,000. (See bulletin of the association, September, 1896, page 214.) So soon as the result of the election in 1892 was known, with a certainty of free wool, the free-wool price of wool commenced in 1893, a year in advance of the act of August 27, 1894.

The increase in number of sheep in 1893 over 1892 was 2,335,188. If the increase had continued at the same rate until now, the number would be 7,005,564, which at \$2.25 per head would be \$15,762,519. Thus the total loss (1) in value of sheep (2) farm value of wool, and in number and value of sheep would be \$178,793,121.

These figures, as to number of sheep, are official from the Department of Agriculture. The eminent secretary of the National Association of Wool Manufacturers, S. N. D. North, in the bulletin of the association for September, 1896, says:

"There is a widespread impression that the statisticians of the Department have so managed their figures that the full dimensions of the injury done the sheep industry are not revealed in them. In several States the returns of the assessors indicate losses in sheep much greater than the Department shows. Many districts are found where the slaughter has been wholesale. Mr. W. B. Snow, formerly assistant statistician of the Department of Agriculture, a man thoroughly cognizant of the methods of obtaining these figures, has recently completed an independent investigation, which reduces the total number of sheep now in the country to 32,000,000, more than 4,000,000 below the Government figures, and indicating a loss in the last three years of 15,250,000 of sheep. It is our opinion that Mr. Snow's estimate is closer to the fact than that of the Department; but it is not necessary to impeach the official figures in order to make out a case against the legislation which is destroying the results of thirty years of protection in this industry."

It can not be properly said that the decline in the number of sheep and wool products was compensated for by other farm stock and crops of hay and cereals, because:

1. The place for the sheep could not be supplied immediately with horses, cattle, or hogs.

2. There had already been such overproduction of all these farm animals that an increase in the number would aggravate the evil, and still further reduce the already ruinously low prices.

3. If the lands devoted to the sheep, which were driven to slaughter by free wool, had been devoted to increased production of cereals, this, too, would have aggravated the evils of overproduction and still further depressed the already ruinously low prices.

4. There are vast areas of land which can be utilized only for sheep. Of this class of lands are: (a) Mountain sides, inaccessible to any stock but sheep and goats, and (b) prairie lands in Texas and other States, with grass so sparse that cattle or horses can not secure enough support, while sheep can. This is fully shown in Senate Document No. 17, of the Fifty-fourth Congress, first session.

5. The decline in the number of sheep took away a large market for pasturage, hay, corn, and oats, which reduced the already ruinously low prices of these crops.

6. With adequate protection for wool the number of sheep, instead of declining in 1893 and since, would have increased, and thus have added to the wealth of the country and increased the demand for and hence the acreage of pasturage, meadows, and cereal crops, and furnished a market for all.

7. It follows from these facts that the loss to woolgrowers, as stated, of \$178,793,121, by no means presents the full measure of their loss.

8. In addition to the items of loss enumerated, there were others:

(a) The depreciation in the value of sheep ranches; and

(b) The depreciation in and sometimes the loss of buildings and fixtures erected for sheep husbandry, and implements needed for it.

9. Free wool resulted in:

(a) The most fearful, devastating destruction of wealth; and

(b) Operated as the greatest barrier to an increase of wealth ever enforced on this country by hostile legislation.

#### THE REMEDY.

The remedy was promised in the Republican platform of 1896—"The most ample protection for wool."

The National Wool Growers' Association in December, 1895, agreed on a wool tariff bill, which has been more strongly indorsed than any measure ever presented to Congress. It was indorsed:

1. By the National Wool Growers' Association in December, 1895; again in December, 1896, and again January 4-6, 1897.

2. By the Farmers' National Congress, November 10-13, 1896.

3. By the Ohio State Grange, December, 1896.

4. By the Ohio Wool Growers' Association, January 13, 1897; and

5. By many other woolgrowers' associations.

This proposed bill asks Congress (1) to impose on merino wool and wools of the mutton breeds of sheep, unwashed, 12 cents a pound; (2) on other wools, 8 cents a pound; (3) double duty on all if washed, and (4) treble if scoured. It provides that Australian and similar wools of light shrinkage in scouring, as shorn in native condition, shall be deemed washed; that wool in any other than ordinary condition of whole fleece shall be subject to double duty, and defines what shall be deemed scoured wool, and that China wool shall be dutiable as the long wools of the mutton breeds.

#### WOOL DEALERS ON THE BILL.

Samuel Lee & Co., eminent wool merchants of Philadelphia, in a letter January 12, 1897, say the duty wanted is, per pound:

"Twelve cents on fine unwashed.

"Double duty on washed.

"Treble duty on scoured.

"On China wool 12 cents.

"On Bagdad wools 10 cents.

"On noils 20 cents.

"On ring waste and roving waste 30 cents."

Thus you see the woolgrowers have friends among Eastern wool dealers.

It seems to me to be regretted that the eminent wool merchant and able advocate of protection generally—Theodore Justice, of Justice, Bateman & Co., and some others—are favoring wool duties which would give no adequate protection to the wool industry.

WILLIAM LAWRENCE,  
*President of the National Wool Growers' Association.*

[Justice, Bateman & Co., wool commission merchants, 122 South Front street, Philadelphia, February 1, 1897.]

#### THE TONE OF THE MARKET.

The wool market is active and prices for light, sound, deep-grown fleeces show an upward tendency. Although as yet there is very little more machinery in motion, the improved market is owing to the efforts of manufacturers to secure a supply of

wool in advance of their wants while they can do so on the free-trade basis. Many lots of wool have sold freely at higher prices than the figures at which they have frequently been refused by the same buyers during the past three months. Many of the old moth-eaten domestic wools which have been carried for two years while manufacturers have been using foreign have gone into consumers' hands. These wools were perishable property, and had to be sold for what they would bring. Such forced sales have somewhat interfered with the upward tendency. The enormous quantities available at the London auctions have also acted as a check upon the tendency of American wools to advance. The latter are given the preference by speculators when they can be had below the London parity, but when American owners have refused to sell on the London scoured basis, orders have gone to the latter place. The last two years have shown the commanding influence exercised by America upon the wool trade of Europe, and values at the sales now in progress could not be sustained without the support of the United States. All this activity comes from the profound conviction on the part of both manufacturers and speculators that an extra session will be called shortly after Major McKinley's inauguration for the purpose of revising the tariff with a view to giving the Government more revenue, and as wool is a fair article for taxation, some sort of a duty on this staple seems certain.

#### COURSE OF THE LONDON WOOL MARKET SINCE 1890, AS SHOWN BY TOPS.

[Diagram on third page.]

The diagram on the third page indicates the general course of fine-wool prices in Europe from January, 1890, to December 31, 1896, as shown by No. 60's botany tops. These are made from such greasy merino wools as are not favorites with American buyers, and such as are seldom brought to the United States, but which constitute the bulk of the European supply. The grease prices in Europe of such merino wools as enter into the manufacture of No. 60's tops vary all the way from 8 cents for heavy to 24 cents for light, but when these widely varying greasy wools are scoured, carded, and combed into tops, they are thus brought to a uniform condition, and their quotations indicate the general course of fine-wool values.

The downward inclination to wool values from 1890 to 1895 was mainly the result of the increase in the world's supply of merino wools during that period. This was temporarily interrupted abroad by the passage of the Wilson law, which threw the American market for woollens open to the competition of the world, and at once made it greatly to the interest of American manufacturers to buy foreign instead of domestic wool, to the neglect of the latter. Thus stimulated by increased American demand prices abroad advanced 33½ per cent within a period of only four months in the summer of 1895. This is indicated by the pyramid in the diagram, which marks the point where American purchases of foreign wool and goods were heaviest. The purpose of this diagram is to show how the downward inclination of foreign prices previous to 1895 may from similar causes be again expected after wool duties are restored.

This subject is important at this time as indicating the necessity for some provision for a graduated tariff which from year to year for a brief period will increase the duty on wool as foreign prices fall, which they are sure to do when the tariff again restores American markets to American producers, and deprives foreign markets of the American support that since early in 1895 has so greatly stimulated them.

#### TARIFF HEARINGS BEFORE COMMITTEE ON WAYS AND MEANS.

The parties heard before the Ways and Means Committee in favor of a tariff upon wool and manufactures thereof (Schedule K) were almost unanimous in their appeal for a tariff that would stand the test of time; one that would be considered so moderate by the majority of the people of the United States that it would not soon be overturned, and one that at the same time would furnish ample protection to the languishing wool and woollen industry. It was conceded that a tariff law to be permanently satisfactory to the mass of the American people who are not directly interested in the growth of wool, must be a modification of the McKinley law; that is, it must be, at the start at least, a little lower, even if clearly shown that the duties of that law were no more than sufficient to offset the advantages possessed by foreign competitors. On unwashed wools of the first class about 9 cents per pound was considered the least that would be satisfactory. If there was any guarantee that the present prices of foreign wools would be maintained, a duty of 9 cents per pound would probably approach a figure that would be satisfactory to all but woolgrowers. But as the best class of skirted Australian wools on at least two occasions within the past eleven years have been 6 cents per pound below the present price, and will in all probability soon be that low again after the reimposition of a tariff upon wool, 6 cents of the 9 cents tariff would soon be offset by the foreign

decline. The American grower would then have on an average of but 3 cents per pound more than the present prices for his wool. Therefore, while a duty of 9 cents would be ample at the start, a permanent duty of 9 cents per pound would, in our opinion, be insufficient.

#### ESTIMATES OF FUTURE SUPPLY AND PRICES.

The diagram at the top of the second page has been prepared to illustrate how the increase in the supply of wool in the Southern Hemisphere from 1890 to 1895 (indicated by the upward inclining solid black lines connecting the black spots) caused the decline in price during that period. The latter is illustrated by the downward inclining solid black lines connecting the crosses or stars, showing a fall of 5 cents per pound during that period on the choicest quality alone. This downward course of prices abroad was checked by the repeal of the McKinley law, which opened the American markets to unrestricted foreign competition. The choicest grade of Australian wool most popular with American buyers, viz, Port Phillip, advanced 28 per cent. The dotted lines between the black spots give the estimated increase in the supply of the same wool by 1901, calculated upon a continuation at the same rate of increase as the past seven years. The dotted lines between the crosses, or stars, indicate the estimated effect upon future prices of this probable increase in the supply. The Port Phillip wool may by 1901 again touch 8d. or 16 cents, which low figure has twice before been reached. Therefore, a new tariff law to be permanently satisfactory and adequately protective to woolgrowers must provide for future competition with the best grade of Australian at the low figure of 8d., or 16 cents, in London, as against 11d., or 22 cents, at this date. A graduated duty, providing for an annual increase of 1 cent per pound after the close of each fiscal year for the next four years, has been proposed to the Ways and Means Committee to cover the very probable contingencies of increased supply and decreased price as indicated upon the chart, and the working of such a graduated tariff is illustrated by the table at the bottom of the next page, which was designed to show consumers how the cost of wool and manufactures thereof in all probability will be 2 cents per pound cheaper to them on wool and 8 cents per pound cheaper on woolen goods in one year, and 5 cents per pound cheaper on wool and 20 cents per pound cheaper on goods in four years, by such a graduated tariff, than the average cost of these same articles during the McKinley period. The duty then upon unwashed wool was 11 cents per pound, and the compensatory duty upon cloth was 44 cents per pound, which is a necessary provision to enable the American manufacturer to pay a duty on wool and to run his mill. Without this compensatory feature American mills would be closed, and there would then be no American market for domestic wool.

#### LONDON AUCTIONS.

The colonial wool auctions opened in London on January 19 at a decline of about 5 per cent from the closing rates of the December sales. American competition during the second week of the sales was keen enough to cause the recovery of this opening decline. The quantity being purchased for America at this sale promises to exceed that of any previous series.

#### EXPORTS OF WOOLEN AND WORSTED YARNS AND MANUFACTURES OF WOOL FROM GREAT BRITAIN INTO THE UNITED STATES DURING THE PAST FOUR YEARS.

From 1887 to 1890 (the last four years of the tariff law of 1883), the weight of the woolen and worsted yarns, and other manufactures of wool, exported from Great Britain (the Continent sent almost twice as much) to the United States averaged 4,480,250 pounds. During the four years of the McKinley law (from 1891 to 1894) the average was only 2,682,500 pounds, a decline of 40 per cent from the previous period, which represented the increased employment of the American mills and an increased domestic wool market in the United States. During 1895 and 1896, under the Wilson law, the average was 5,028,000 pounds, an increase of imports over the McKinley law period of 87½ per cent, which represents the narrowing of our home markets to home manufacturers and the extent to which foreign manufacturers have been permitted to monopolize them. This not only represents the loss of employment to American factory employees who have been deprived of their means of earning a livelihood, but it also represents the loss of the home market for domestic wool and an indirect loss in the purchasing power of the nation of over \$400,000,000 annually, thus indirectly injuring the so-called consuming class.

In view of these facts can any of the 70,000,000 consumers in the United States object to the passage of a moderate tariff bill that will aid in restoring a great industry which is being rapidly destroyed by the Wilson tariff law?

Diagram showing fluctuation in the price of 60<sup>5</sup> Botany Tops for New Zealand  
from Shadforth's *Observer* (Nov. 2nd, 1890).

\* This indicates the turning point between the depression in the foreign price caused by the rapidly increasing production of wool and the stimulating influence upon the price by the increased American demand after the Wilson law went into operation. Botany Tops of No. 60s quality, as indicated in the diagram, advanced 33 per cent between June and September, 1895 (the first calendar year of the Wilson law). After protective duties are restored, the former causes which produced the decline previous to 1895 will be again operative, and the next decline in foreign prices in all probability will touch the lowest on record.

## 1432 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

Table showing how the proposed graduated wool duties will reduce the cost to consumers of Port Phillip wool from 2 to 5 cents per pound, and cloth from 8 to 20 cents per pound, below the average cost of the McKinley period, and at the same time provide moderate protection to American woolgrowers against an almost certain fall of 6 cents or over in foreign-wool values.

| McKinley duty, October, 1890, to August, 1894. | Proposed graduated duty, changing June 30 of each year until 1900, and continuing thereafter without change. | Average price in London of choice Port Phillip wool for ten years ending 1894 was 21.70 cents, or practically 22 cents. | Estimated price in London of choice Port Phillip wool at the close of each of the fiscal years ending June 30, 1898, 1899, 1900, and 1901. | Cost of choice Port Phillip wool to consumers landed in New York (exclusive of freight and charges). | Lower to consumers on each pound of wool than under the McKinley law, when the duty was 11 cents per pound. | Lower to consumers on each pound of cloth than McKinley law. Compensatory duty of 44 cents per pound. |

The CHAIRMAN. Beginning at 12 cents and finally landing at what?

Mr. TURNER. What will be the maximum end of the gradual increase?

Mr. LAWRENCE. The sixteenth clause of the bill proposes an annual increase of one-half cent per pound, commencing one year after the 30th of June following the passage of the bill and running four years.

Mr. TURNER. So that if wool should go down in other countries, relatively, the duty exacted would go up in this country to meet it?

Mr. LAWRENCE. The object would be finally, when we are able to supply all here, to shut out all foreign wool, and just the same with woolen goods. If protection means anything, it means to give us an advantage over foreign countries. It means to increase our product, and not give it to the foreigner.

The CHAIRMAN. You would exclude finally, under your policy, all products of other countries which we could produce here at all?

Mr. LAWRENCE. All which we could produce sufficiently to supply our wants; yes, sir.

Mr. TURNER. What would become of our commerce then?

Mr. LAWRENCE. We do not produce coffee or tea. We do not produce—

Mr. WHEELER. We can produce tea very well.

Mr. LAWRENCE. We should buy from the foreign countries those things which we can not produce, and we should ship to them those things which we can produce and which they can not, and that is the legitimate business of commerce, in my judgment.

Mr. TURNER. And in order to help these flock masters, of whom you say there are about a million in the United States—

Mr. LAWRENCE. There are not so many now. There were about a million.

The CHAIRMAN. Your plan is to increase the duty until it reaches 15 cents?

Mr. LAWRENCE. Fourteen cents. Mr. Chairman and gentlemen, I have collected together for your convenience the wool-tariff acts of 1867, 1883, and 1890, with the provisions relating to wool manufactures and the woolgrowers' bill, which I will file, to be printed as an appendix to my remarks.

---

## APPENDIX.

---

### *WOOL-TARIFF ACTS AND PROVISIONS AS TO DUTIES ON WOOLEN GOODS IN THE ACTS OF 1867, 1883, 1890, AND 1894, AND THE WOOL-TARIFF BILL ASKED FOR BY THE WOOLGROWERS.*

#### THE ACT OF MARCH 2, 1867.

voices, books, or papers are deposited relating to the merchandise in respect to which such fraud is alleged to have been committed, and to take possession of such books or papers and produce them before the said judge; and any invoices, books, or papers so seized shall be subject to the order of said judge, who shall allow the examination of the same by the collector of customs of the port into which the alleged fraudulent importation shall have been made, or by any officer duly authorized by said collector. And such invoices, books, or papers may be retained by said judge as long as in his opinion the retention thereof may be necessary; but no warrant for such seizure shall be issued, unless the complainant shall set forth the character of the fraud alleged, the nature of the same, and the importations in respect to which it was committed, and the papers to be seized. And the warrant issued on such complaint, with report of service and proceedings thereon, shall be returned as other warrants to the court of the district within which such judge presides.

524. SECTION 3. Whenever the collector or other chief officer of the customs of any port shall be notified in writing by the owner or consignee of any vessel or vehicle, arriving from any foreign port or place, of a lien for freight on any merchandise imported in such vessel or vehicle, and remaining in his custody, such collector or other officer is hereby authorized and empowered to refuse the delivery of such merchandise from any public or bonded warehouse, or other place in which the same shall be deposited, until proof to his satisfaction shall be produced that the freight due thereon has been paid or secured; but the rights of the United States shall not be prejudiced thereby, nor shall the United States or its officers be in any manner liable for losses consequent upon such refusal to deliver; and if merchandise so subject to a lien, regarding which notice has been filed as aforesaid, shall be forfeited to the United States and sold, the freight due thereon shall be paid from the proceeds of such sale in the same manner as other charges and expenses now authorized by law to be paid therefrom.

525. SECTION 4. That the seventh section of "An act to prevent and punish frauds upon the revenue, to provide for the more certain and speedy collection of claims in favor of the United States, and for other purposes," approved March three, eighteen hundred and sixty-three; the seventeenth section of the "Act further to prevent smuggling, and for other purposes," approved July eighteen, eighteen hundred and sixty-six, and all other laws or parts of laws inconsistent with, or supplied by the provisions of this act, be, and they are hereby, repealed. And the Secretary of the Treasury shall prescribe all needful regulations to carry out and enforce the provisions of this act.

MARCH 2, 1867.

[U. S. Statutes at Large, Vol. XIV, p. 559.]

CHAP. CXC VII.—*An Act to provide increased Revenue from imported Wool, and for other Purposes.*

526. SECTION 1. From and after the passage of this act, in lieu of the duties now imposed by law on the articles mentioned and embraced in this section, there shall be levied, collected, and paid, on all unmanufactured wool, hair of the alpaca, goat, and other like animals, imported from foreign countries, the duties hereinafter provided. All wools, hair of the alpaca, goat, and other like animals, as aforesaid, shall be divided for the purpose of fixing the duties to be charged thereon, into three classes, to wit: (368.)\*

CLASS 1.—CLOTHING WOOL:

527. That is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote; down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three. (368.)

CLASS 2.—COMBING WOOLS:

528. That is to say, Leicester, Cotswold, Lincolnshire, down combing wools,† or other like combing wools, of English blood, and usually known by the terms herein used; and also all hair of the alpaca, goat, and other like animals. (368, 543.)

CLASS 3.—CARPET WOOLS, AND OTHER SIMILAR WOOLS:

529. Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere. (368.)

530. For the purpose of carrying into effect the classification herein provided, a sufficient number of distinctive samples of the various kinds of wool or hair embraced in each of the three classes above-named, selected and prepared under the direction of the Secretary of the Treasury, and duly verified by him (the standard samples being retained in the Treasury Department), shall be deposited in the custom-houses and elsewhere, as he may direct, which samples shall be used by the proper officers of the customs to determine the classes above specified, to which all imported wools belong. (368.)

531. And upon wools of the first class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port,† shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and in addition thereto, eleven per centum ad valorem; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty-two cents per pound, the duty shall be twelve cents per pound, and in addition thereto, ten per centum ad valorem. Upon wools of the second class, and upon all hair of the alpaca, goat, and other like animals, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and in addition thereto, eleven per centum ad valorem; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed

\* Classification by race and blood the rule. (Feb. 26, 1869, N. Y. Syn. Ser., 361.)

† The words "Canada long wools" to be inserted here. (See 543, *post.*)

thirty-two cents per pound, the duty shall be twelve cents per pound, and in addition thereto, ten per centum ad valorem. Upon wools of the third class, the value whereof at the last port or place whence exported into the United States, excluding charges in such port,\* shall be twelve cents or less per pound, the duty shall be three cents per pound; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed twelve cents per pound, the duties shall be six cents per pound: *Provided*, That any wool of the sheep, or hair of the alpaca, goat, and other like animals, which shall be imported in any other than the ordinary condition as now and heretofore practiced, or which shall be changed in its character or condition, for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt, or any other foreign substance, shall be subject to pay twice the amount of duty to which it would be otherwise subjected, anything in this act to the contrary notwithstanding: *Provided, further*, That when wool of different qualities is imported in the same bale, bag, or package, it shall be appraised by the appraiser, to determine the rate of duty to which it shall be subjected, at the average aggregate value of the contents of the bale, bag, or package: and when bales of different qualities are embraced in the same invoice at the same prices whereby the average price shall be reduced more than ten per centum below the value of the bale of the best quality, the value of the whole shall be appraised according to the value of the bale of the best quality; and no bale, bag, or package shall be liable to a less rate of duty in consequence of being invoiced with wool of lower value: *And provided, further*, That the duty upon wool of the first class which shall be imported washed shall be twice the amount of duty to which it would be subjected if imported unwashed, and that the duty upon wool of all classes which shall be imported scoured shall be three times the amount of the duty to which it would be subjected if imported unwashed (368). On sheepskins [and Angora goatskins,] (638), raw or unmanufactured (368), imported with the wool on, washed or unwashed, the duty shall be thirty per centum ad valorem (595); and on woollen rags (183), shoddy (368), mungo, waste, and flocks† (368), the duty shall be twelve cents per pound.

SECTION 2. In lieu of the duties heretofore imposed by law on the articles hereinafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid on the goods, wares, and merchandise herein enumerated and provided for, imported from foreign countries, the following duties and rates of duty, that is to say:

532. On woollen cloths, woollen shawls, and all manufactures of wool of every description‡ made wholly or in part of wool, not *herein* otherwise provided for, fifty cents per pound, and, in addition thereto, thirty-five per centum ad valorem (370).

533. On flannels,§ blankets, hats of wool,|| knit goods, Balmorals (537), woollen

\*“ The commissions, &c., required to be included by section 9, act of July 28, 1866 (*ante*, 516), in the dutiable value of imported merchandise, are to be *included* in the dutiable value of wool, but *excluded* in determining the classification or rate of duty under the above act. This view was taken by Department's decision of Sept. 21, 1869 (Synopsis, 457), which held that the above words, ‘*excluding charges in such port*’ have reference only to determining the *rate of duty* to which imported wools are liable, and do not exclude such charges from entering into and forming part of their *dutiable value*.” (April 20, 1870, Bost. Syn. Ser., 641.) See also Dept. decision of April 9, 1868 (N. Y.), as to inclusion of the packing or bailing of Cordova wool in hide covers, in ascertaining the dutiable value. (Syn. of Decisions, 1868, No. 84.)

† The percentage of allowance for increase of weight of wool should be ascertained by the appraisers and reported to collector in the same manner as estimates of damage. (May, 1871, N. Y.)

‡ “Pulverized waste, or flock, or shoddy,” was held to be liable to the same duty as waste, flocks, or shoddy, under the act of 1846. (*Lamrig vs. Maxwell*, 3 Bl. C. C., 125. See also Tr. Reg., p. 567.)

§ “Paddings,” called “calf hair and cotton paddings,” but returned by the appraiser as manufactures of wool and cotton, are subject to duty at the rate of fifty cents per pound and thirty-five per centum ad valorem, under this provision. (Feb. 9, 1872, Phil.)

|| “The materials of which certain railway rugs, imitation Astrakhan cloth, seal skin cloakings, and other similar goods are composed, mfd. partly of hair, having been found to be so blended that it was impracticable to determine by an examination whether said goods contained any wool or worsted, or wool or worsted waste, the Department decided that they should be classified as a mf. of wool, under the second clause of section 2, Act March 2, 1867, except in cases where the invoice is accompanied by a certificate from the manufacturer of the goods” in the form prescribed S. S., 739.

On October 19, 1875 (S. S., 2480), the Department ruled that this certificate should, in future, be *disregarded*; and *reinstated* prior rules and principles for the determination of the classification of all goods imported under the commercial designation of “calf- or cow-hair goods;” to apply, not only to subsequent importations, but also to those previously made, and remaining in the custody of the collector.

Upon like importations remaining in warehouse, or withdrawn upon entries not finally liquidated, duties were directed to be assessed, as far as practicable, at the rates appertaining to mfs. in part of wool n. o. p. f.

As to liquidated withdrawal entries covering goods of this class, the Department reserved the right of reliquidation and suit for the recovery of balances. (S. S., 2480.) But, under Department ruling of Oct. 26, 1876, all mfs. commercially known as “*calf or cow hair goods*,” are dutiable as *woollens or their similitudes respectively*, under 1162-68, or 908. (S. S., 3011. See T. D., 122.)

§ See Treasury Regulations of 1857, pp. 555, 556, as to what is comprehended under the term “blanket.”

|| “Travelling rugs,” held not to be blankets. (September 21, 1859, New York.)

|| “The term ‘hats of wool’ applies only to hats the bodies of which are composed of wool that has undergone no process of manufacture except felting or fulling, and not to hats made of woollen cloth.” (September 1, 1860, New York.)

and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted,\* the hair of the alpaca, goat, or other like animals, except such as are composed in part of wool, not otherwise provided for, valued at not exceeding forty cents per pound, twenty cents per pound; valued at above forty cents per pound and not exceeding sixty cents per pound, thirty cents per pound; valued at above sixty cents per pound and not exceeding eighty cents per pound, forty cents per pound; valued at above eighty cents per pound, fifty cents per pound; and in addition thereto, upon all the above-named articles, thirty-five per centum ad valorem.

534. On endless belts or felts for paper or printing machines, twenty cents per pound and thirty-five per centum ad valorem.

535. On bunting, twenty cents per square yard, and, in addition thereto, thirty-five per centum ad valorem.

536. On women's and children's dress goods and real or imitation Italian cloths, composed wholly or in part of wool, worsted,† the hair of the alpaca, goat, or other like animals, valued at not exceeding twenty cents per square yard, six cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; valued at above twenty cents the square yard, eight cents per square yard, and, in addition thereto, forty per centum ad valorem: *Provided*, That on all goods weighing four ounces and over per square yard, the duty shall be fifty cents per pound, and, in addition thereto, thirty-five per centum ad valorem.

537. On clothing ready made, and wearing apparel‡ of every description, and Balmoral (533) skirts and skirting, and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other like animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, except knit goods, fifty cents per pound, and, in addition thereto, forty per centum ad valorem.

538. On webbings, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress-trimmings, head-nets, buttons or barrel buttons, or buttons of other forms for tassels or ornaments, wrought by hand or braided by machinery, made of wool, worsted, or mohair, or of which wool, worsted or mohair§ is a component material, [unmixed with silk,] (547,) fifty cents per pound, and, in addition thereto, fifty per centum ad valorem.

539. On Aubusson and Axminster carpets, and carpets woven whole for rooms, fifty per centum ad valorem; on Saxony, Wilton, and Tournay velvet carpets, wrought by the Jacquard machine, seventy cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on Brussels carpets wrought by the Jacquard machine, forty-four cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on patent velvet and tapestry velvet carpets, printed on the warp or otherwise, forty cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on tapestry Brussels carpets, (369.) printed on the warp or otherwise, twenty-eight cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on treble ingrain, three-ply, and worsted chain Venetian carpets, seventeen cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on yarn Venetian and two-ply ingrain carpets, twelve cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on druggets|| and bockings, printed, colored, or otherwise, twenty-five cents per square yard, and, in addition thereto, thirty-five per centum ad valorem; on hemp or jute carpeting, eight cents per square yard; on carpets and carpetings of wool flax, or cotton, or parts of either, or other material, not otherwise herein specified, forty per centum ad valorem: *Provided*, That mats, rugs,¶ screens, covers, hassocks, bedsides, and other portions of carpets or carpeting shall be subjected to the rate of duty

\* "Worsted being a distinct article, known in commerce under that name, worsted shawls with cotton borders, and suspenders with cotton ends, are not liable to be rated for duties as manufactures of wool. (Elliott vs. Swartwout, 10 Pet. 137.)

† "Under the act of 1842, goats' hair, plush or mohair plush, though composed partly of cotton was chargeable with duty as a manufacture of 'goats' hair or mohair.'" (Thorp vs. Lawrence, 1 Bl. C. C. 351.)

‡ See last note on preceding page.

§ "Under the act of 1846 shawls of worsted and cotton, silk and worsted, silk, barege, merino, mousseline de laine, and worsted and silk scarfs, were subject to a duty of thirty per centum ad valorem, as wearing apparel." (Maillard vs. Lawrence, 16 How. 251, S. C. 1 Bl. C. C. 504.)

|| "Under that act, scarfs or shawls, manufactured in looms, in strips or pieces, containing several, and actually separated before importation, were chargeable with a duty of thirty per centum as wearing apparel." (Ibid. See also Tr. Reg., p. 583.)

¶ "By the term 'wearing apparel,' Congress intended to make the *purpose, adaptation, and use* of an article, and *not* its commercial designation, the test of its dutiable description." (Ibid.)

§ This clause embraces braids of cotton and worsted. (Dept. Let., April 11, 1867, C. & Co.) And galloons and fringes of mohair and bugles. (April 9, 1867, L. & B.) And gimps or trimmings of worsted and beads. (May 1, 1867, J. C. K.) And dress-trimmings of worsted and beads. (May 31, 1867, New York.)

|| The decision of the United States Circuit Court in *United States vs. Turnbull et al.*, acquiesced in by the Department, classifies felt carpeting under this clause, at 40 per centum ad valorem. (Jan. 30, 1872. Baltimore, Syn. Series, 1011.)

¶ See Department Letter of September 11, 1866, to S. & Co. as to what were "rugs" under the fifth section of the tariff act of 1864. (§ 369, ante.)

herein imposed on carpets or carpeting of like character or description, and that the duty on all other mats, (not exclusively of vegetable material,) (369,) screens, hassocks, and rugs,\* shall be forty-five per centum ad valorem.

540. On oil-cloths for floors, stamped, painted, or printed, valued at fifty cents or less per square yard, thirty-five per centum ad valorem; valued at over fifty cents per square yard, and on all other oil-cloths, (except silk oil-cloth,) and on waterproof cloth, not otherwise provided for, forty-five per centum ad valorem; on oil silk cloth, sixty per centum ad valorem.

---

MARCH 2, 1867.

[U. S. Statutes at Large, Vol. XIV, p. 571.]

No. 28.—*Joint Resolution to amend Section five of an Act entitled "An Act to increase Duties on Imports, and for other Purposes," approved June thirtieth, one thousand eight hundred and sixty-four.*

541. That the paragraph of section five (372) of an act entitled "An act to increase duties on imports, and for other purposes," approved June thirtieth, eighteen hundred and sixty-four, as follows, to wit: "On lastings, mohair cloth, silk, twist, wool, or other manufactured cloth woven or made in patterns of such size, shape, and form, or cut in such manner as to be fit for shoes, slippers, boots, gaiters, and buttons (548) exclusively, not combined with India-rubber, ten per centum ad valorem," be, and the same is hereby, repealed.† (372, 532, 533.)

542. SECTION 2. From and after the passage of this resolution, machinery for the manufacture of beet sugar, and imported for that purpose solely, shall be exempted from duty.

---

MARCH 22, 1867.

[U. S. Statutes at Large, Vol. XV, p. 21.]

No. 8.—*Joint Resolution to supply an Omission in the Enrolment of the "Act to provide increased Revenue from imported Wool, and for other Purposes."*

543. WHEREAS, in the enrolment of the bill entitled "An act to provide increased revenue from imported wool, and for other purposes," approved March second, eighteen hundred and sixty-seven, the words "Canada long wools" were inadvertently omitted from the paragraph designated under the heading "Class 2. Combing Wools;" and whereas said words are in the engrossed bill, and were intended as part of the act aforesaid, as passed by the Thirty-ninth Congress: Therefore—

*Be it Resolved, &c.,* That the "Act to provide increased revenue from imported wool, and for other purposes," aforesaid, be, and is hereby, amended by inserting after the words "Down combing wools," in the paragraph headed "Class 2. Combing Wools," the words "Canada long wools." (528.)

---

MARCH 25, 1867.

[U. S. Statutes at Large, Vol. XV, p. 22.]

No. 11.—*Joint Resolution fixing the Rate of Duty on Umbrellas, and on Wire Spiral Furniture Springs.*

544. From and after the passage of this joint resolution, there shall be levied, collected and paid upon umbrellas (739), parasols, and sunshades, imported from foreign countries, when made of silk, no lower rate of duty than that now imposed upon piece and dress silks namely, sixty per centum ad valorem, and when made of other materials than silk, the duty shall be fifty per centum ad valorem (739); and that wire spiral furniture springs, imported from foreign countries, manufactured of iron wire, shall be required to pay the same rate of duty as now imposed on iron wire, namely, two cents per pound, and fifteen per centum ad valorem.

---

\* Certain so-styled "railway rugs" of cows' hair and cotton, or calves' hair and cotton, held not to be "rugs" under this act. They should be classified according to the materials of "which they are composed, to be determined by the appraiser on examination," &c. (January 18, 1870, United States Appraiser, Boston.)

† "The Department's decision of March 22, 1867, held that the joint resolution of March 2, 1867, has the effect of repealing all laws discriminating in favor of 'lastings, mohair cloth, silk, twist, wool, or other manufactured cloth' woven or made in patterns, or cut in such manner as to be fit for shoes, boots, gaiters, . . . and of making such merchandise liable to the rates of duty *respectively* provided therefor by the tariff acts now in force, the same as if they were not intended for such purposes."

"Under said decision certain slipper patterns of wool are liable to a duty of fifty cents per pound and thirty-five per centum ad valorem." (August 15, 1868, Boston.)

MARCH 26, 1867.

[U. S. Statutes at Large, Vol. XV, p. 23.]

No. 13.—*Joint Resolution providing for the Importation into the United States of certain Works of Art Duty free, and for other Purposes.*

545. From and after the passage of this joint resolution any object of art imported by any individual or association of individuals for presentation as a gift to the United States government, or to any State, county, or municipal government, shall be admitted free of duty, under such rules and regulations as the Secretary of the Treasury may prescribe.\*

546. SECTION 2. That the Secretary of the Treasury be, and hereby is, authorized to refund the duties paid on any steam agricultural machinery imported into the United States during the current fiscal year as models or for experimental purposes, and to remit the duties on any steam machinery of like description which may be imported for such purpose prior to the thirtieth of June, eighteen hundred and sixty-eight. *Provided*, That this section shall apply only to steam ploughs.

MARCH 29, 1867.

[U. S. Statutes at Large, Vol. XV, p. 24.]

*Joint Resolution to amend an Act entitled "An Act to provide increased Revenue from imported Wool and for other Purposes."*

547. That the act entitled "An act to provide increased revenue from imported wool and for other purposes," approved March second, eighteen hundred and sixty-seven, be amended by striking out in the paragraph commencing with the words "on webbings, beltings, bindings, braids," the following words, viz., "unmixed with silk."

548. SECTION 2. The joint resolution of March second, eighteen hundred and sixty-seven, to amend section five of an act entitled "An act to increase the duties on imports and for other purposes," approved June thirtieth, eighteen hundred and sixty-four, shall not be construed to apply to lasting, mohair cloth, silk, twist, or other manufactures of cloth woven or made in patterns of such size, shape and form, or cut in such manner as to be fit for buttons exclusively. (372.)

THE ACT OF MARCH 3, 1883.

SCHEDULE K.—WOOL AND WOOLENS.

352. All wools, hair of the alpaca, goat, and other like animals, shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

353. Class 1, clothing wools.—That is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

354. Class two, combing wools.—That is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also all hair of the alpaca, goat, and other like animals.

355. Class three, carpet wools and other similar wools.—Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

356. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. The duty

\*The regulations issued May 25, 1867, under this act, are as follows:

"The individual or association of individuals importing any object of art for presentation as a gift to the United States Government, or to any State, county, or municipal government, is required to make an application in writing to the Department, requesting such free entry, which shall contain a description of the work of art imported, and the name of the branch of the United States Government, or of the State, county, or municipal government, to which the presentation is intended to be made; such application to be accompanied by a letter, or other evidence, from the chief officer of the branch of the United States Government, or of the State, county, or municipal government, signifying the acceptance of such work of art as a gift."

upon wool of the sheep, or hair of the alpaca, goat, and other like animals, which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject.

357. Wools of the first class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty cents or less per pound, ten cents per pound; wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty cents per pound, twelve cents per pound.

358. Wools of the second class, and all hair of the alpaca, goat, and other like animals, the value whereof, at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty cents or less per pound, ten cents per pound; wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty cents per pound, twelve cents per pound.

359. Wools of the third class, the value whereof, at the last port or place whence exported to the United States, excluding charges in such port, shall be twelve cents or less per pound, two and a half cents per pound; wools of the same class, the value whereof, at the last port or place whence exported to the United States, excluding charges in such port, shall exceed twelve cents per pound, five cents per pound.

360. Wools on the skin, the same rates as the other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

361. Woolen rags, shoddy, mungo, waste, and flocks, ten cents per pound.

362. Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding eighty cents per pound, thirty-five cents per pound and thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

363. Flannels, blankets, hats of wool, knit goods, and all goods made on knitting-frames, balmorals, woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals, (except such as are composed in part of wool), not specially enumerated or provided for in this act, valued at not exceeding thirty cents per pound, ten cents per pound; valued at above thirty cents per pound, and not exceeding forty cents per pound, twelve cents per pound; valued at above forty cents per pound and not exceeding sixty cents per pound, eighteen cents per pound; valued at above sixty cents per pound, and not exceeding eighty cents per pound, twenty-four cents per pound; and in addition thereto, upon all the above-named articles, thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

364. Bunting, ten cents per square yard, and in addition thereto, thirty-five per centum ad valorem.

365. Women's and children's dress goods, coat linings, Italian cloths, and goods of like description, composed in part of wool, worsted, the hair of the alpaca, goat, or other animals, valued at not exceeding twenty cents per square yard, five cents per square yard, and in addition thereto thirty-five per centum ad valorem; valued at above twenty cents per square yard, seven cents per square yard, and forty per centum ad valorem; if composed wholly of wool, worsted, the hair of the alpaca, goat, or other animals, or of a mixture of them, nine cents per square yard and forty per centum ad valorem, but all such goods with selvages, made wholly or in part of other materials, or with threads of other materials introduced for the purpose of changing the classification, shall be dutiable at nine cents per square yard and forty per centum ad valorem: *Provided*, That all such goods weighing over four ounces per square yard shall pay a duty of thirty-five cents per pound and forty per centum ad valorem.

366. Clothing, ready-made, and wearing apparel of every description, not specifically enumerated or provided for in this act, and balmoral skirts, and skirting, and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, except knit goods, forty cents per pound, and in addition thereto, thirty-five per centum ad valorem.

367. Cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer (except knit goods), forty-five cents per pound, and in addition thereto forty per centum ad valorem.

368. Webbing, gorings, suspenders, braces, beltings, bindings, braids, galloons, fringes, gimps, cords and tassels, dress-trimmings, head-nets, buttons, or barrel buttons, or buttons of other forms for tassels or ornaments, wrought by hand, or braided

by machinery, made of wool, worsted, the hair of the alpaca, goat, or other animals, or of which wool, worsted, the hair of the alpaca, goat, or other animals is a component material, thirty cents per pound, and in addition thereto, fifty per centum ad valorem.

369. Aubusson, Axminster, and chenille carpets, and carpets woven whole for rooms, forty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

370. Saxony, Wilton, and Tournay velvet carpets, forty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

371. Brussels carpets, thirty cents per square yard, and in addition thereto, thirty per centum ad valorem.

372. Patent velvet and tapestry velvet carpets, printed on the warp or otherwise, twenty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

373. Tapestry Brussels carpets, printed on the warp or otherwise, twenty cents per square yard, and in addition thereto, thirty per centum ad valorem.

374. Treble ingrain, three-ply, and worsted-chain Venetian carpets, twelve cents per square yard, and in addition thereto, thirty per centum ad valorem.

375. Yarn Venetian, and two-ply ingrain carpets, eight cents per square yard, and in addition thereto, thirty per centum ad valorem.

376. Druggets and bockings, printed, colored, or otherwise, fifteen cents per square yard, and in addition thereto, thirty per centum ad valorem.

377. Hemp or jute carpeting, six cents per square yard.

378. Carpets and carpetings of wool, flax, or cotton, or parts of either or other material, not otherwise herein specified, forty per centum ad valorem; and mats, rugs, screens, covers, hassocks, bedsides, and other portions of carpets or carpetings, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description; and the duty on all other mats not exclusively of vegetable material, screens, hassocks, and rugs, shall be forty per centum ad valorem.

379. Endless belts or felts for paper or printing machines, twenty cents per pound and thirty per centum ad valorem.

#### THE ACT OF OCTOBER 1, 1890.

##### SCHEDULE K.—WOOL AND MANUFACTURES OF WOOL.

375. All wools, hair of the camel, goat, alpaca, and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes:

376. Class one, that is to say, Merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

377. Class two, that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel, goat, alpaca, and other like animals.

378. Class three, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for.

379. The standard samples of all wools which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

380. Whenever wools of class three shall have been improved by the admixture of Merino or English blood from their present character as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class one or as class two, as the case may be.

381. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

382. Unwashed wools shall be considered such as shall have been shorn from the

sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.

383. The duty upon wool of the sheep or hair of the camel, goat, alpaca, and other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

384. The duty upon all wools and hair of the first class shall be eleven cents per pound, and upon all wools or hair of the second class twelve cents per pound.

385. On wools of the third class and on camel's hair of the third class the value whereof shall be thirteen cents or less per pound, including charges, the duty shall be thirty-two per centum ad valorem.

386. On wools of the third class, and on camel's hair of the third class, the value whereof shall exceed thirteen cents per pound including charges, the duty shall be fifty per cent. ad valorem.

387. Wools on the skin shall pay the same rate as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

388. On noils, shoddy, top waste, slubbing waste, roving waste, ring waste, yarn waste, garnetted waste, and all other wastes composed wholly or in part of wool, the duty shall be thirty cents per pound.

389. On woolen rags, mungo, and flocks, the duty shall be ten cents per pound.

390. Wools and hair of the camel, goat, alpaca, or other like animals, in the form of roping, roving, or tops, and all wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this act, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this act.

391. On woolen and worsted yarns made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, valued at not more than thirty cents per pound, the duty per pound shall be two and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto, thirty-five per centum ad valorem; valued at more than thirty cents and not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem; valued at more than forty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem.

392. On woolen or worsted cloths, shawls, knit fabrics, and all fabrics made on knitting machines or frames, and all manufactures of every description made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, not specially provided for in this act, valued at not more than thirty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem; valued at more than thirty and not more than forty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem; valued at above forty cents per pound, the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

393. On blankets, hats of wool, and flannels for underwear composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animals, valued at not more than thirty cents per pound, the duty per pound shall be the same as the duty imposed by this act on one pound and one-half of unwashed wool of the first class, and in addition thereto thirty per centum ad valorem; valued at more than thirty and not more

than forty cents per pound, the duty per pound shall be twice the duty imposed by this act on a pound of unwashed wool of the first class; valued at more than forty cents and not more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class; and in addition thereto upon all the above-named articles thirty-five per centum ad valorem. On blankets and hats of wool composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animal, valued at more than fifty cents per pound, the duty per pound shall be three and a half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem. Flannels composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animals, valued at above fifty cents per pound shall be classified and pay the same duty as women's and children's dress goods, coat linings, Italian cloths, and goods of similar character and description provided by this act.

394. On women's and children's dress goods, coat linings, Italian cloths, and goods of similar character or description of which the warp consists wholly of cotton or other vegetable material, with the remainder of the fabric composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, valued at not exceeding fifteen cents per square yard, seven cents per square yard, and in addition thereto forty per centum ad valorem; valued at above fifteen cents per square yard, eight cents per square yard, and in addition thereto fifty per centum ad valorem: *Provided*, That on all such goods weighing over four ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

395. On women's and children's dress goods, coat linings, Italian cloth, bunting, and goods of similar description or character composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, and not specially provided for in this act, the duty shall be twelve cents per square yard, and in addition thereto fifty per centum ad valorem: *Provided*, That on all such goods weighing over four ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

396. On clothing, ready made, and articles of wearing apparel of every description, made up or manufactured wholly or in part not specially provided for in this act, felts not woven, and not specially provided for in this act, and plushes and other pile fabrics, all the foregoing, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals the duty per pound shall be four and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

397. On cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies and children's apparel and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, made up or manufactured wholly or in part, the duty per pound shall be four and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

398. On webbings, gorings, suspenders, braces, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, laces and embroideries, head nets, buttons, or barrel buttons, or buttons of other forms, for tassels or ornaments, wrought by hand or braided by machinery any of the foregoing which are elastic or non-elastic, made of wool, worsted, the hair of the camel, goat, alpaca, or other animals, or of which wool, worsted, the hair of the camel, goat, alpaca, or other animals is a component material, the duty shall be sixty cents per pound, and in addition thereto sixty per centum ad valorem.

399. Aubusson, Axminster, Moquette, and Chenille carpets, figured or plain, carpets woven whole for rooms, and all carpets or carpeting of like character or description, and oriental, Berlin, and other similar rugs, sixty cents per square yard, and in addition thereto forty per centum ad valorem.

400. Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard, and in addition thereto forty per centum ad valorem.

401. Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, forty-four cents per square yard, and in addition thereto forty per centum ad valorem.

402. Velvet and tapestry velvet carpets, figured or plain, printed on the warp or otherwise, and all carpets or carpeting of like character or description, forty cents per square yard, and in addition thereto forty per centum ad valorem.

403. Tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise, twenty-eight cents per square yard, and in addition thereto forty per centum ad valorem.

404. Treble ingrain, three-ply and all chain Venetian carpets, nineteen cents per square yard, and in addition thereto forty per centum ad valorem.

405. Wool Dutch and two-ply ingrain carpets, fourteen cents per square yard, and in addition thereto forty per centum ad valorem.

406. Druggets and bockings, printed, colored, or otherwise, twenty-two cents per square yard, and in addition thereto forty per centum ad valorem. Felt carpeting, figured or plain, eleven cents per square yard, and in addition thereto forty per centum ad valorem.

407. Carpets and carpeting of wool, flax or cotton, or composed in part of either, not specially provided for in this act, fifty per centum ad valorem.

408. Mats, rugs, screens, covers, hassocks, bed sides, art squares, and other portions of carpets or carpeting made wholly or in part of wool, and not specially provided for in this act, shall be subjected to the rate of duty herein imposed on carpets or carpetings of like character or description.

#### THE ACT WHICH TOOK EFFECT AUGUST 27, 1894.

##### SCHEDULE K.—WOOL AND MANUFACTURES OF WOOL.

279. On flocks, mungo, shoddy, garnetted waste, and carded waste, and carbonized noils, or carbonized wool, fifteen per centum ad valorem, and on wool of the sheep, hair of the camel, goat, alpaca, or other like animals, in the form of roving, roping, or tops, twenty per centum ad valorem.

280. On woolen and worsted yarns made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, valued at not more than forty cents per pound, thirty per centum ad valorem; valued at more than forty cents per pound, forty per centum ad valorem.

281. On knit fabrics, and all fabrics made on knitting machines or frames, not including wearing apparel, and on shawls made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, valued at not exceeding forty cents per pound, thirty-five per centum ad valorem; valued at more than forty cents per pound, forty per centum ad valorem.

282. On blankets, hats of wool, and flannels for underwear and felts for printing machines, composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animals, valued at not more than thirty cents per pound, twenty-five per centum ad valorem; valued at more than thirty and not more than forty cents per pound, thirty per centum ad valorem; valued at more than forty cents per pound, thirty-five per centum ad valorem: *Provided*, That on blankets over three yards in length the same duties shall be paid as on woolen and worsted cloths, and on flannels weighing over four ounces per square yard, the same duties as on dress goods.

283. On women's and children's dress goods, coat linings, Italian cloth, bunting, or goods of similar description or character, and on all manufactures, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, including such as have India rubber as a component material, and not specially provided for in this Act, valued at not over fifty cents per pound, forty per centum ad valorem; valued at more than fifty cents per pound, fifty per centum ad valorem.

284. On clothing, ready made, and articles of wearing apparel of every description, made up or manufactured wholly or in part, not specially provided for in this Act, felts not specially provided for in this Act, all the foregoing composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, including those having India rubber as a component material, valued at above one dollar and fifty cents per pound, fifty per centum ad valorem; valued at less than one dollar and fifty cents per pound, forty-five per centum ad valorem.

285. On cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel, and goods of similar description or used for like purposes, and on knit wearing apparel, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, made up or manufactured wholly or in part, fifty per centum ad valorem.

286. On webbings, gorings, suspenders, braces, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, laces, embroideries, head nets, nettings and veilings, buttons, or barrel buttons, or buttons of other forms, for tassels or ornaments, any of the foregoing which are elastic or nonelastic, made of wool, worsted, the hair of the camel, goat, alpaca, or other animals, or of which wool, worsted, the hair of the camel, goat, alpaca, or other animals is a component material, fifty per centum ad valorem.

287. Aubusson, Axminster, Moquette, and Chenille carpets, figured or plain, carpets woven whole for rooms, and all carpets or carpeting of like character or description, and oriental, Berlin, and other similar rugs, forty per centum ad valorem.

288. Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, forty per centum ad valorem.

289. Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, forty per centum ad valorem.

290. Velvet and tapestry velvet carpets, figured or plain, printed on the warp or otherwise, and all carpets or carpeting of like character or description, forty per centum ad valorem.

291. Tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise, forty-two and one-half per centum ad valorem.

292. Treble ingrain, three-ply, and all chain Venetian carpets, thirty-two and one-half per centum ad valorem.

293. Wool Dutch and two-ply ingrain carpets, thirty per centum ad valorem.

294. Druggets and bockings, printed, colored, or otherwise, felt carpeting, figured or plain, thirty per centum ad valorem.

295. Carpets and carpeting of wool, flax, or cotton, or composed in part of either, not specially provided for in this Act, thirty per centum ad valorem.

296. Mats, rugs for floors, screens, covers, hassocks, bed sides, art squares, and other portions of carpets or carpeting made wholly or in part of wool, and not specially provided for in this Act, shall be subjected to the rate of duty herein imposed on carpets or carpetings of like character or description.

297. The reduction of the rates of duty herein provided for manufactures of wool shall take effect January first, eighteen hundred and ninety-five.

685. All wool of the sheep, hair of the camel, goat, alpaca, and other like animals, and all wool and hair on the skin, noils, yarn waste, card waste, bur waste, slubbing waste, roving waste, ring waste, and all waste, or rags composed wholly or in part of wool, all the foregoing not otherwise herein provided for.

#### THE WOOL-TARIFF BILL AS ASKED FOR BY THE NATIONAL WOOL-GROWERS' ASSOCIATION, JANUARY, 1897.

A BILL to levy and collect duties on wool, hair, sheep, cotton, and other fibers.

*Be it enacted, etc.,* That from and after the passage of this act there shall be levied, collected, and paid upon all wools, cotton, hairs, and other fibers and sheep imported from foreign countries, and mentioned in Schedule K, herein contained, the rates of duties which are, by said schedule and paragraphs, respectively prescribed, namely.

#### SCHEDULE K.—WOOL.

All wools, hair of the camel, goat, alpaca, llama, and other like animals, shall be divided, for the purpose of fixing the duties to be charged thereon, into the following classes:

First. Class one, that is to say, merino, mestiza, metz, or metis wools, and including all other wools having any admixture of Merino blood, immediate or remote, Down clothing wools, and wools of like character, with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australasia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated. Also Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools, having any admixture of English blood, immediate or remote, and usually known by the terms herein used, and also all China wools, and similar wools, and all hair of the camel, goat, alpaca, llama, and other like animals.

Second. Class two, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and including all such wools of like character, from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for, and not including any wools hereinbefore mentioned. But no wool shall be deemed of this class because imported from the places named.

Third. From the standard samples of all wools and hair, which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be selected under his direction the standards for the classification of wools under this act, and he shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

Fourth. Whenever wools of class two shall have been improved by the admixture of Merino, or English, or other blood, or by domestication, or breeding, from their original native character, such improved wools shall be classified for duty as class one, as the case may be.

Fifth. The duty on all wools and hair which shall be imported, washed or otherwise cleansed, shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on all wools and hair which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

Sixth. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing—that is, in their natural condition. Washed wools shall be considered such as have been washed with cold water on the sheep's back, and Australasian wools, and wools of similar light shrinkage in scouring, having any admixture of merino blood, as shorn from the sheep's back without washing, shall

be deemed washed wool. Wool washed or cleansed in any other manner than on the sheep's back, as aforesaid, shall be considered as scoured wool.

And all wools having less than twelve per centum of grease, yolk, dirt, or other foreign matter, shall be deemed scoured, and wools having any admixture of Merino blood, immediate or remote, and having less than 60 per centum of grease, yolk, dirt, or other foreign matter, shall be deemed washed, and all other wools having less than 25 per centum of grease, yolk, dirt, or other foreign matter, shall be deemed washed.

Seventh. The duty upon wool of the sheep or hair of the camel, goat, llama, alpaca, and other like animals, which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which has been skirted, sorted, or otherwise increased in value by the rejection of any part of the original fleece or otherwise, shall be twice the duty to which it would be otherwise subject.

If any bale or package of wool or hair specified in this act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool or hair of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flecks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

Eighth. The duty upon all wools and hair of the first class shall be twelve cents per pound, and upon all wools or hair of the second class, eight cents per pound.

Ninth. Wools and hair on the skin shall pay the same rate as other wools and hair, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe, but the quantity shall include all, without reference to the length of the staple.

Tenth. Wools and hair of the camel, goat, llama, alpaca, or other like animals, in the form of roping, roving, or tops, and all wool and hair, which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this act, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this act.

Eleventh. On noils, shoddy, mungo, flecks, and rags composed wholly or in part of wool, on top waste, burr waste, slubbing waste, carded waste, roving waste, ring waste, yarn waste, garnetted waste, and all other wastes composed wholly or in part of wool, and on carbonized wools, and on clippings and other pieces of textile fabrics composed wholly or in part of wool the duty shall be 30 cents per pound.

Twelfth. On cattle and calf hair and other animal fibers not herein nor elsewhere specified the duty shall be 15 cents per pound.

Thirteenth. On the wool and hair of the Angora goat and other like animal fibers the duty shall be 50 cents per pound.

Fourteenth. There shall be levied, collected, and paid upon sheep and lambs imported from foreign countries, except as hereinafter provided, the rates of duty following: On mutton sheep, two dollars per head; on stock sheep other than bucks and on lambs, one dollar and fifty cents per head; on bucks, including lambs for stock sheep, three dollars per head.

Fifteenth. Any animal imported specially for breeding purposes shall be admitted free: Provided, that no such animal shall be admitted free unless pure bred of a recognized breed, and duly registered in the book of record, established for that breed: And provided further, that certificate of such record and of the pedigree of such animal shall be produced and submitted to the customs officer, duly authenticated by the proper custodian of such book of record, together with the affidavit of the owner, agent, or importer that such animal is the identical animal described in said certificate of record and pedigree. The Secretary of the Treasury may prescribe such regulations as may be required for the strict enforcement of the provisions of this act, provided, also, that for the period of two years from and after the passage of this act native Mexican ewes shall be admitted free of duty.

Sixteenth. On and after the thirtieth day of June, commencing one year after the thirtieth day of June following the passage of this act, the duty prescribed in this act shall be annually increased one-half cent per pound for four years on unwashed wools and hair, and 1 cent on washed, and  $1\frac{1}{2}$  cents on scoured wools and hair.

Seventeenth. There shall be levied and collected duties on Peruvian cotton, otherwise called vegetable wool, 15 cents per pound, and on other raw cottons 2 cents per pound.

*PRICES OF WOOLS IN THE UNITED STATES, 1824 TO 1896, INCLUSIVE.*

The following prices of wool in the United States from 1824 to 1896, inclusive, are taken from Wool, and Manufactures of Wool, by Worthington C. Ford, Chief of the Bureau of Statistics, Treasury Department.

PRICE PER POUND OF FINE, MEDIUM, AND COARSE WASHED CLOTHING FLEECE WOOL, ETC., IN THE NEW YORK MARKET FOR THE MONTHS OF JANUARY, APRIL, JULY, AND OCTOBER, IN THE GIVEN YEARS. (CURRENCY PRICES FROM 1862 TO 1878.)

*a* This amount does not include the value of "hired property."

In the present census there has been secured a closer subdivision of the number of looms employed upon each variety of carpets than has heretofore been made. The number of ingrain power looms has increased from 1,873 to 4,214; the number of brussels power looms from 756 to 1,224, and the number of tapestry brussels looms from 547 to 1,498.

There has been an increased production from this increased weaving machinery very nearly commensurate with the enlarged capacity thus indicated, as is shown by the following table, in which the relative quantities of the different varieties of carpets manufactured in 1890 and 1880 are set forth in detail:

## CARPETS.

| Years.  | Total carpets (running yards). | Ingrain, 2-ply (square yards). | Ingrain, 3-ply (square yards). | Ingrain art (square yards). | Venetian (running yards). | Body brussels (running yards). | Tapestry brussels (running yards). | Tapestry velvet (running yards). |
|---------|--------------------------------|--------------------------------|--------------------------------|-----------------------------|---------------------------|--------------------------------|------------------------------------|----------------------------------|
| 1890... | 74,770,910                     | 32,918,659                     | 3,251,368                      | 553,513                     | .....                     | 6,245,465                      | 23,205,844                         | 2,482,128                        |
| 1880... | 39,282,634                     | 21,986,434                     | 862,394                        | .....                       | 1,984,201                 | 4,077,190                      | 9,441,195                          | 60,000                           |

| Years.  | Wilton (running yards). | Axminster (running yards). | Moquette (running yards). | Smyrna (square yards). | Cottage (square yards). | Dutch (square yards). | Rag (square yards). | All other (square yards). |
|---------|-------------------------|----------------------------|---------------------------|------------------------|-------------------------|-----------------------|---------------------|---------------------------|
| 1890... | 1,030,101               | 379,341                    | 3,193,186                 | 127,177                | .....                   | .....                 | 71,310              | 1,312,818                 |
| 1880... | 157,629                 | 303,366                    | .....                     | .....                  | 241,220                 | 12,000                | 157,005             | .....                     |

The ordinary ingrain carpet width is 1 yard, but other carpets are usually made three-quarters of a yard in width. These figures show an increase of about 90 per cent in the production of carpets.

The increase in the manufacture of rugs and art squares is even greater than in carpets. In 1880 the census reported the manufacture of 40,000 separate druggets. In 1890 the druggets are reported in square yards, of which there were 103,258 square yards manufactured. In rugs of all descriptions there were made in 1880, 47,530, and in 1890, 1,563,303. Many of our largest manufacturers turned their machinery largely to the making of rugs, in response to the popular taste for partially covered floors. The greater part of this manufacture was of the cheaper grades, but the product also contained many rugs of a very high quality of material and workmanship, commendable for the skill and taste displayed in coloring and pattern. While these American rugs do not take the place of the eastern hand-made rugs, which remain unrivaled by the products of machine manufacture, they easily stand the test of comparison with any similar work done in Europe.

*Statistics of carpets manufactured in the United States during the year ending June 1, 1860*

| United States.             | Number of establishments. | Capital invested. | Raw materials used. |                   |                 | Cost of raw material. |

## 1492 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

## WOOL PRICES IN THE UNITED STATES, 1896.

The following statistics compiled by Justice, Bateman & Co., of Philadelphia, show the prices of wools in that and other Eastern cities under the McKinley Act, until the election of 1892 gave the certainty of free wool, and the continued and further decline in price after the Wilson bill became a law:

*Table showing the price per pound for the leading grades of American wool in the Eastern market and on the farm on January 1 and July 1 for the years 1891, 1892, 1893, 1894, 1895, and 1896.*

| Grades.                                                                            | 1891.                                             |                       |                                                   |                       | 1892.                                             |                       |                                                   |                       |

Every woolgrower knows that these free-wool prices are ruinous to American sheep husbandry.

ENGLISH PRICES FOR THE LONG WOOLS OF THE MUTTON BREEDS, 1784 TO 1894.

The ruling prices of "down" fleeces, as paid to the growers or flock masters for the last one hundred and ten years.

[United States Consul Claude Meeker.]

## LONDON PRICE OF WOOLS 1869-1893.

The annexed diagram shows the London prices of wools from 1869 to 1893, taken from the Treasury Department report on wool and manufactures of wool, 1894, between pages 562-563.

## THE INDIANA WOOLGROWERS' ASSOCIATION INDORSES THE WOOLGROWERS' BILL.

The following resolutions were reported by the committee on resolutions at the annual meeting of the Indiana Woolgrowers' Association, held on the 5th and 6th days of January, 1897, at the city of Indianapolis, and unanimously adopted, and the secretary ordered to have them printed and to forward a copy to the Hon. Nelson Dingley, jr., chairman of the Committee on Ways and Means in the present House of Representatives in Congress, and a like copy to each Member of Congress from the State of Indiana:

Whereas the convention that nominated William McKinley as a candidate for the Presidency of the United States embodied in the platform of principles then declared the following promise, viz:

"To wool, the product of the great industry of sheep husbandry as well as to the finished woollens of the mills, we promise most ample protection."

And whereas that promise was accepted in good faith by more than one million of husbandmen and farmers that are now engaged in sheep husbandry and woolgrowing in the United States, or that would gladly engage therein, with proper governmental protection, and without whose votes McKinley could not have been elected: Therefore,

*Resolved*, That as American citizens engaged in that "great industry," we demand that that pledge shall be sacredly kept, and that in framing any law on the subject of protection by customs duties that shall be enacted that it shall be so framed as to afford protection to woolgrowers equal in all respects to that afforded to the most favored industries of the country.

*Resolved*, That we believe sheep husbandry and woolgrowing to be essential to our national prosperity and well-being, not only in times of peace, but also to our national defense in times of war, which calamity is liable to befall us at any time. Hence, we hold that it is the duty of Congress to enact such laws as will, by means of tariff protection against the ruinous competition of foreign-grown wool in the markets of the United States, warrant farmers and woolgrowers of our own country in extending and enlarging that industry sufficiently to meet and supply every demand for home consumption with home-grown wool, which can only be accomplished by levying such customs duties on imported wool as will make it unprofitable to those engaged in the importation and sale of wools grown on cheap lands and by cheap and depressed labor in foreign countries to undersell us in our own markets.

*Resolved*, That we are in favor of the enactment into law of the wool schedule embodied in the draft of a bill prepared and accompanying the memorial of the National Woolgrowers' Association to Congress, adopted at their meeting commencing on the 4th day of December, 1895, in the city of Washington, D. C., which will be found on pages 83 and 84 of Senate Document No. 17, Fifty-fourth Congress, first session, believing that anything substantially short of the duties proposed in said draft will be inadequate and fail to give that "ample protection" promised, and that we have a right to expect, and now respectfully demand.

*Resolved*, That we respectfully ask that all duties on shoddy rags and other substitutes for wool shall be so high as to be prohibitive.

*Resolved*, That we earnestly protest against ad valorem duties in any form, but that in all cases whatever, where duties shall be levied, they shall be specific, that they may not be evaded by fraudulent undervaluations.

JOHN W. ROBE,  
*Secretary Indiana Woolgrowers' Association.*

## WOOL DUTIES RECOMMENDED BY SAMUEL LEE.

NO. 14 NORTH FRONT STREET, PHILADELPHIA, PA.,  
February 3, 1897.

DEAR SIR: The duty of 12 cents I named on China wool was too high. It ought to be about 5 cents. The duty as named before is about right on the balance of the list I sent you. South American crossbreeds want a good duty put on.

I remain, yours, truly,

SAML. LEE.

Hon. WM. LAWRENCE.

## TEXAS WOOL DEALERS.

The following letter, preceded by editorial comment, is from the San Angelo Enterprise, Texas, February 2, 1897:

## SHEEPMEN'S WANTS.

The following letter, dated San Angelo, January 28, was sent by the Texas Woolgrowers' Association to the executive committee of the National Woolgrowers' Association now in session at Washington, D. C., and is self-explanatory:

DEAR SIR: The woolgrowers of Texas will be satisfied with a specific duty of 8 cents per pound on wools in the grease, with a duty on washed, scoured, sorted, and skirted wools, tops, noils, wastes, shoddies, and all other forms in which wools or substitutes of wools are imported, equivalent to 8 cents per pound on unwashed wools shrinking 67 per cent. We only ask 8 cents per pound duty, but we want it to be 8 cents all the way through on unwashed wools of above stated shrinkage.

We are strongly opposed to the importation of Mexican ewes free of duty, and think the duty on all kinds of sheep should be \$2 per head.

Yours, very truly,

C. G. BURBANK, *President.*  
GEO. RICHARDSON, *Secretary.*

*Comments thereon.*—There are some woolgrowers and wool dealers who desire *one rate* of duty on ALL WOOLS without regard to class. They of course advocate this on the expectation that the desired rate shall give a *protective benefit* equal to that rate. A duty of 8 cents per pound on merino wool shrinking 67 per cent means, of course, 24 cents on scoured.

This rate of 24 cents per scoured pound of the long wools of the mutton breeds and of the so-called third-class or carpet wools is equal to 16 cents per unwashed pound of such wools, because the *average* of such wools as would be imported will shrink in scouring only about 30 per cent.

There is much justice in demanding this rate, because these wools compete directly with ALL our American wools, and the imports of third-class wools, as heretofore shown, largely exceeded in one year more than the imports of all other classes of wools.

At the recent meeting of the Texas Woolgrowers' Association the proceedings did not make any recommendation as to rate.

STATEMENT MADE BY MR. THEODORE JUSTICE, OF PHILADELPHIA, PENNSYLVANIA.

WEDNESDAY, *January 6, 1897.*

Mr. JUSTICE said: Mr. Chairman and gentlemen of the committee, I am neither a woolgrower nor a manufacturer, but as I have been both I am possibly somewhat qualified to speak of the interests of both; but still I do not appear here to-day in the interest of either the woolgrower or the manufacturer—that is, in the interest of one more than the other. I particularly desire to be heard in the interest of the man who has not yet appeared before your committee—that is the consumer. There are 70,000,000 of them.

The subjects which I have arranged to speak upon here are arranged in order. The matter is printed. I shall not attempt to read it. It is prepared for your committee. But I thought it would facilitate your arrival at just conclusions if I call your attention to some of the facts which you, not being experts, possibly might find of value.

The wool question is a difficult one for most men to understand, and an object lesson, a sort of kindergarten, will perhaps make it more plain than an elaborate article read from manuscript.

I propose to discuss the consumer, and to show how he has been injured by free wool, owing to the removal of the McKinley duties in one schedule alone. I propose to show that while the consumer has received the benefit of 93 cents per capita in cheaper clothing, by reason of the removal of the duty on wool, he has been crippled in his purchasing power nearly \$6 per capita, in order that he may save 93 cents.

I desire to show how woolgrowing has been destroyed by the Wilson law and how the destruction of the industry has been checked by Mr. McKinley's election. I wish to discuss the importance of domestic wool as a munition of war.

Schedule K of the McKinley tariff was misunderstood. The erroneous impression has prevailed in the public mind that the McKinley law was too high. It was not a Chinese wall. It was not a prohibitory tariff; under it the American people reached the highest point of prosperity. We had under it a higher degree of prosperity than any other nation in the world. I wish to show our experience under four different tariff laws during sixteen years. I will show the effect upon sheep husbandry during these periods of adequate and inadequate protection. In making a new law you will have the benefit of the experience of the past four laws. There were two periods under the last four tariff laws when we had adequate protection. If you will examine them you will see where the line should now be drawn between adequate and inadequate protection.

I will allude to the world's supply and its effect upon prices. I wish to show how American protection raised American prices and lowered foreign prices at the same time for wools of the same kind and quality; and also to show, in opposition to that, how free trade lowered American prices and advanced the foreign prices of wool of the same kind and quality.

I wish to speak of carpet wool, and of compensatory duties on woolens especially. These samples are arranged to illustrate the relation of compensatory duties to raw wool, a subject most difficult for laymen to comprehend. I desire to speak on the subject of shoddy.

Mr. EVANS. Would it be any trouble to speak on that subject first, compensatory duties?

Mr. JUSTICE. No, sir; only that it might confuse the systematic arrangement of my papers.

Mr. EVANS. You may not have time to speak fully on that when you get to it in the regular order.

Mr. JUSTICE. Anything I fail to have time to fully discuss you will have access to later on in my printed argument.

The matter of shoddy is one which, possibly, I can now pass over because it eloquently tells its own story in the papers submitted and requires no samples with which to illustrate it.

I also wish to show how the McKinley law was framed by a convention of both growers and manufacturers, every one of whom was an expert in his line. I wish to show how, with the exception only of Judge Lawrence, they agreed on that law unanimously. There has never been a more perfect schedule than Schedule K of the law of 1890, and, with all due respect to this committee, I do not hesitate to say there will never be a better one; barring a few changes in rates to suit present conditions, there should, in my opinion, be no other changes. No other tariff schedule has ever been framed by men so many of whom were experts. Major McKinley stated to the convention which framed Schedule K that if they would agree upon it unanimously it should go into the bill.

I propose to conclude my remarks with a draft or suggestion of a new tariff law that is adjusted to the altered conditions of the times, and that will represent McKinleyism. McKinleyism as I understand it means the recovery of lost industries. It means to the American producer enough duty upon imports to put him on equal terms, and no more, with his foreign competitor.

There is an impression that the equivalent of the duties imposed upon the imported manufactures of wool go into the pockets of the domestic manufacturers. I propose to show that with wages 50 per cent lower in England than in America and 60 per cent lower in Germany than in America (which of course means that wages are 100 per cent higher here than in England and 150 per cent higher than in Germany) that 50 per cent ad valorem duty, only one-third of which is collected, is inadequate to protect our mills to-day. That is one of the causes of their present idleness. Another cause is the decreased purchasing power of the people. If you will permit me to briefly allude to these subjects I will dispose of them as rapidly as I possibly can.

#### LOSS TO THE NATION IN PURCHASING POWER.

The first subject to which I wish to call your attention is the loss in one year's purchasing power of the American people by the changes in Schedule K alone, which resulted in a loss in purchasing power to this nation of \$426,250,000 on the lowest estimate of statisticians. On an estimate of others it is \$4,000,000,000—the cost of our civil war. I adopt the lowest estimate, the estimate of the late General Walker, of Massachusetts. I have arranged this in debit and credit form so you will understand it.

In 1892 (before the McKinley law was menaced with repeal, and before its influence was discounted and it became a dead letter), the American people produced 145,000,000 pounds of clean scoured wool, and the average value was 55 cents (including the finest and the coarsest). In the year just closed, 1896, America produced 115,000,000

pounds of scoured wool, the average value of which to-day is 30 cents per pound. The removal of the wool duty has lessened the value of scoured wool 25 cents a pound. The 55 cents a pound on the clip of 1892 brought the American wool grower \$79,750,000. The clip of the present year brought him \$34,500,000. The decline in the amount of money which the American woolgrower received for his wool in 1896 as compared with 1892 was \$45,250,000.

The CHAIRMAN. If you will pardon me right there for making an interruption, I would like to ask was that decline confined to the United States alone?

Mr. JUSTICE. Yes, sir.

The CHAIRMAN. There was no decline in the foreign woolproducing countries, taking, for instance, the London market?

Mr. JUSTICE. I am speaking of the loss to the American woolgrower.

The CHAIRMAN. The question was as to whether there were other causes for the decline aside from the removal of the duty.

Mr. JUSTICE. No, sir; the foreign markets advanced; and if they had not the loss here would have been much greater. Prices for Port Phillip wool in London have advanced 30 per cent since Mr. Cleveland issued his second-term inaugural message.

I was approaching the loss to mill hands in the year 1896. The census of 1890 showed that the people working in woolen mills earned annually about \$80,000,000. The mills in 1896 were running less than half time, and, therefore, there was less than \$40,000,000 actually earned. Manufacturers will testify that the consumption of wool in 1896 was less than half of the consumption of raw wool in a normal McKinley year. Therefore, there was a decrease of over \$40,000,000 in the wages of the mill operatives, and a decrease of \$45,250,000, as stated before, in the value of the wool to the grower. That makes \$85,250,000 that was lost to two classes of labor, viz, the woolgrower and the woolen-factory laborer. It has been stated that wages earned by laboring men circulate ten times during a year, and that money earned by farmers from the proceeds of farm products circulates five times during the year. I am willing to assume that wages earned by mill hands circulate no more during the year than those of the farmers, and, therefore, we will multiply by five this \$85,250,000 loss in purchasing power by two classes of people alone to show what has been the loss in the purchasing power of the American nation from the reduction in the wool schedule alone. It reaches the enormous sum of \$426,250,000. This is partly the cause of the depression existing everywhere to-day. Everybody has suffered from this decreased purchasing power of the nation. If you distribute this \$426,250,000 among 70,000,000 people, it amounts to a decrease of purchasing power of about \$6 per capita.

Of course, they are entitled to a credit arising from cheaper clothing through the placing of wool on the free list. If you take what has been saved by the reduction of the cost of scoured wool, amounting to 25 cents a pound, you have saved \$65,000,000 in the cost of clothing and have lost \$426,250,000 in purchasing power. The 70,000,000 people which I stand here to represent have saved 93 cents each but have lost about \$6 each.

I have thus far dealt with the question only as it affects the per capita consumer. I now wish to treat it as it affects the woolgrower alone. The loss to the average woolgrower in the State of New York between the McKinley price for his wool and his sheep and the free trade price to-day is \$430 to each woolgrower. He is entitled to a credit

for what he saves on his clothing. I will allow him eight suits of clothing annually for his family, each suit containing 3 pounds of scoured wool, or 24 pounds of scoured wool, at 60 cents, the McKinley price for wool above the average quality. The cost of 24 pounds at the Wilson law price is 30 cents. He has saved by free wool \$7.20. The net average loss, therefore, by free wool, is \$422.80 for every grower. This is how free wool affects these consumers, and to a lesser degree all other consumers. I have an additional evidence of loss to consumers in a letter which I will come to further on—a woolgrower in Texas, who writes that in 1891 he received 21 cents in Texas for his wool, and the year before last, 1895, only 4½ cents, and last year, 1896, less than 4 cents. He has furnished me with his accounts of sales to produce, if desired. His wool was sold in St. Louis. He states that all the woolgrowers in his part of Texas had decided not to breed their ewes, but to fatten all their sheep and sell them to the slaughterhouses. Since McKinley's election, and under the promise in the St. Louis platform of "the most ample protection" to sheep husbandry, they are again breeding their ewes and preparing to increase their flocks.

#### WOOL AS A MUNITION OF WAR.

I would speak of wool as a munition of war. Imagine our condition if we destroy our flocks, and so become dependent upon British colonies for our wool supply. Having no mercantile marine, our wools from Australia are being carried to-day under the British flag. In case of trouble with England what would be our predicament? We would be without wool, which is as important to us as a munition of war as it is to our personal comfort. Possibly it would bring the importance of the matter more plainly before you if I allude to the difficulty which the Southern Confederacy had from that cause; but that was a small matter in comparison with what happened to General Washington's army. There had been no pretense of uniforming his troops. The only regiment that was uniformed at all at that time was the red-feather militia regiment from Philadelphia, wearing imported cloth. Previous to the Revolution there was not a wool factory in America. Clothing was made from yarn spun in the household. The women spun the yarn and the itinerant weavers from Yorkshire did the weaving on handlooms. The only mills in the country were fulling mills, where goods were sent to be finished. When Washington crossed the Delaware in the ice in a snowstorm and fought the Hessians at Trenton his troops were in threadbare and ragged clothing. They were wearing what they had started with from their homes when they enlisted. At Valley Forge 4,000 of Washington's soldiers were relieved from outdoor duty because they were practically naked. At the time Washington doubtless reflected on the importance of woollen factories as a home industry necessary to provide munitions of war. This thought must have been present with him ever after, as his first official act after becoming President was the signing of a protective tariff law.

#### MCKINLEY LAW WAS NOT TOO HIGH.

Now, I wish to speak of the McKinley law, which has been regarded by many who were not well informed as "a great high Chinese wall—a prohibitory tariff." The uninformed public had that impression. It was not true of Schedule K. Under the first three years of the McKinley law (and I consider it was practically repealed after March 4, 1893, when Mr. Cleveland issued his message) we imported wool and woolens to the

annual average value of \$56,300,000, upon which the duties were over \$42,000,000. Could it have been a Chinese wall? Could it have been a prohibitory tariff if all these goods were imported in spite of it? What was the result of the so-called "prohibitory tariff" to the American people? In one year after the McKinley law was passed the average value of clothing was cheaper than ever before, and so was wool. I now come to the question of the experience with four different tariff laws, to which I would like to call your attention as the most important portion of my paper. Upon you rests the responsibility of forming a tariff law that will last for many years. All parties are willing to concede something for a settlement that will endure for some years. Mr. Cleveland, I believe, said, among the many other catchwords which have been good things to say, that "the tariff will never be settled until it is settled right." It will never be settled right so long as any clause in it permits the destruction of an important American industry. In making the suggestions which I propose for your assistance in this grave matter I have in view the fact that a large number of our 70,000,000 people are not generally informed on the subject of the tariff question. It is impossible to enlighten them, and therefore I would ask for the very least increase in duties that is necessary to check the destruction of important industries that are being rapidly annihilated by Schedule K of the Wilson law.

I ask for the very least that will start our mills; the very least that will give back to the American people this \$6 per capita, or \$412,500,000, lost to consumers in purchasing power through this one Schedule K, upon which you are to act through the information you will receive from the gentlemen appearing here to-day and to-morrow. This diagram (p. 164) which I hold in my hand you will see is divided into four periods. The first period comprises the latter part of the tariff law of 1867, when the duty upon wool was 10 cents a pound plus 11 per cent ad valorem on wool costing 32 cents per pound and under, and 12 cents per pound and 10 per cent ad valorem on wool costing over 32 cents per pound. The amount of duty collected on wool of the first class under this law of 1867 was 12½ cents per pound and upward. Under that law our flocks increased with strides and bounds. In the last four years of that law we increased our flocks 25 per cent. In sixteen years more of that law, undisturbed, with 12½ cents per pound duty on unwashed skirted wool of the first class, we would have doubled our clip. If that law had been permitted to continue and the increase had kept on at that rate, by 1895, or soon thereafter, the American woolgrower would have produced 650,000,000 pounds of wool, which is all that is consumed by the American people, including that used in all of our imported woollen goods.

What happened then under similar conditions can happen again. I don't want to cause a shiver by proposing 12½ cents per pound duty now, when the McKinley law imposed only 11 cents. Conditions have changed since the McKinley law was passed. I think that a little lower duty now would produce the same results that that duty produced at that time. I am sure that 12½ cents per pound would return our flocks to where they were in 1893 inside of eight years.

The second division of this diagram covers the operation of the tariff law of 1883, which was, I presume, the worst tariff law in modern times, as far as Schedule K is concerned, ever had up to the passage of the Wilson law. Under it all the finest productions of woollens that the science and improvements of machinery could produce were admitted at a lower duty than was collected upon the cheapest shoddy goods, because the courts

EXPERIENCE WITH FOUR DIFFERENT TARIFF LAWS.

SCHEDULE F.

\* From the Bulletin of the National Association of Wool Manufacturers  
Sept 1896

decided that the commercial name of such superfine cloths was not woollens, but "worsted." The loss of employment by the American factories under such conditions closed our mills and narrowed the market for wool. Even 10 cents per pound on wool failed to be adequate protection under those conditions. We were without a good home market for our wool. The duty had been reduced from  $12\frac{1}{2}$  to 10 cents, but the industry languished not so much because 10 cents was inadequate as because of the loosely drawn schedules. The custom-house was cheated in a thousand ways. This article, "wool top," [exhibiting sample] was not named in that law of 1883. It should have paid a duty of 60 cents per pound—30 cents as scoured wool, and double duty because it was changed from the usual and ordinary condition of scoured wool. There was such a schedule that made tops (which had heretofore been unknown commercially except to a limited extent) pay a duty of 60 cents per pound. "Tops" are the result of the first process after carding and combing clean, scoured wool.

Mr. GROSVENOR. It has been said that tops are made out of waste—something that is equivalent to waste—a mere by-product.

Mr. JUSTICE. I was just coming to that. This is the same article. It is top broken up in pieces and commercially named "waste." It was imported as "waste" under the law of 1883. It was broken up by machinery made for the purpose of cheating our Government and in order that its commercial name might become "waste." The courts have decided that imported articles should pay the duties at the custom-house according to their commercial designation. Silks suitable for many clothing purposes under the tariff of 1883 came in under the commercial name of "hat trimmings," and the Government had a suit about that, involving millions of dollars. This "broken top" came in then under the commercial name of "waste," and hundreds of thousands of pounds of these so-called wastes, but really highly purified and the most valuable form of pure, scoured wool, came in at 50 cents per pound less than their proper duty. To-day this merino scoured wool [showing sample] is worth 30 to 35 cents in London, while this [showing sample] so-called "waste" is worth 37 to 40 cents in London, worth nearly as much as this top [indicating], a partial manufacture of wool. The McKinley Schedule K was so worded as to stop this abuse. "Waste" cases were tried in our courts. The Government claimed a duty of 60 cents per pound and the importers only 10 cents. The manufacturers interested in importing it at 80 per cent less than its proper duty, brought in droves of people from the mills to testify that it was commercially known as "waste." They were shown samples and were asked, "Are you familiar with this?" "Yes." "What do you call it?" They would answer, "Oh, it is waste." A hundred men from the mills were run through the witness stand in almost as many minutes and a few brief questions asked. The testimony was always the same. It was "waste." The testimony of the few who knew that it was top broken up to cheat the Government had no influence, and so the judge decided that, as the weight of the evidence was that it was "waste," the verdict went against the Government and it was admitted as "waste" at a duty of 10 cents per pound. That was one of the abuses of the law of 1883 that caused the wool industry to decline when the duty on unwashed was 10 cents per pound. There could be no satisfactory sale for American wool when you could bring in that valuable article [indicating sample of broken top] at 10 cents a pound duty, instead of 60 cents per pound. It paid only the duty of shoddy, while it was worth 900 per cent more

than shoddy. Those were some of the reasons why 10 cents per pound was then inadequate and our wool producers were injured.

The CHAIRMAN. That fraud on the revenue was cured by the act of 1890.

Mr. JUSTICE. It was, but the Government loss in revenue had been 50 cents a pound. The decline in the number of sheep under the tariff law of 1883 began to show by 1884, and by 1888 there had been a decrease of 17 per cent in their number. In 1888 when General Harrison was elected the decline was checked, because the platform upon which he was elected had in it a clause which declared for protection for wool. That clause, I consider, caused him to be elected. Two years before the McKinley law was passed, but under the promise of the McKinley law, with only 10 cents per pound duty on unwashed skirted wool of the first class, the flocks increased. This 10 cents seemed to be adequate then; therefore I differ with Judge Lawrence when he states that 10 cents a pound was never adequate. I say 10 cents when our mills are busy and when there is a good market for American wool is adequate. But when the Judge undertakes to say that the McKinley law was not a measure of adequate protection for wool, I also differ with him and can show beyond any possibility of doubt that both wool and woolens were amply protected under that law. So far as Schedule K goes, I would be glad to see it reenacted almost without the crossing of a "t" or the dotting of an "i," and if reenacted I believe both manufacturers and growers in less than one year would again prosper as they did before.

I hope to be able to demonstrate that, while the McKinley law was a measure of adequate protection, it was not a "Chinese wall" nor a prohibitory tariff.

The next or third period of my diagram begins in 1888 when Mr. Harrison was elected, and continues from that time up to President Cleveland's second inaugural message. Under the adequate protection of the third period the clips increased 13 per cent, and if that rate of increase had continued until 1905, according to commercial estimates, and until 1915, on the estimates of the Department of Agriculture, America would have produced 650,000,000 pounds of wool, which is the entire quantity we consume.

Now, I come to the last period, the period of free trade, in which cries of despair come from every quarter of the land.

When President Cleveland made it known in his inaugural that he meant to continue his assault upon the wool industry, the farmers, knowing that he had both branches of Congress with him, realized that their fate was sealed; and while the price of sheep was high, they were butchered in countless numbers. This diagram in the fourth part shows that the destruction of the flocks began immediately. From March 1893 to March 1896, 23 per cent of the sheep had disappeared. This in the short space of less than four years. This is only the estimate of the Department of Agriculture; others, with more accurate means of knowing, make the destruction much larger.

Judge Lawrence has alluded to the estimate of Mr. Snow, who was assistant statistician of the Agricultural Department. This gentleman has access to all of the means for acquiring information possessed by the Government. He made a canvass recently on his own responsibility, and he declares the number of sheep to-day to be only 32,000,000, which is less than I show in this diagram. I adopt for the diagram the official figures, but I believe the commercial figures, based on Mr. Snow's estimate, to be the more accurate. Under the latter we have

Under the adequate protection of the tariff law of 1867 (when the duty on wool of the first class was 12½ cents per pound and upward) the clip of the United States increased faster than that of any other nation in the World. During this period wool in London of the same kind and quality averaged more than 50 per cent below the prices in the United States.

fewer sheep in the United States to-day than we had in 1865, at the close of the war. (See table following giving number of sheep since 1860.)

*a* Estimate of National Association Woolen Manufacturers.

*b* Estimate of W. B. Snow, formerly statistician of Agricultural Department.

This enormous increase, the result of the law of 1867, reached the highest point at the beginning of January, 1884; we then had over 50,500,000 sheep. To-day there are, on Mr. Snow's estimate, which I believe to be correct, only 32,000,000 sheep, a decline of 30 per cent. Under free trade one of the greatest agricultural industries is literally being annihilated. If the destructive influence of free wool is not checked at once we will soon be without wool. In this connection I ask you to again let your thoughts revert to the condition of that patriotic band at Valley Forge. I beg of you to consider what may befall this proud nation under similar circumstances in case of a war with Great Britain. Do not let the lesson learned at Valley Forge be in vain.

Some questions were asked Judge Lawrence, I forget by whom, as to how many years, with adequate protection, it will take before we will be able to restore our flocks to where they were in 1884. The top line in this diagram shows the increase in Australia from 1873 to 1884, when our destruction began, to have been from 280,000,000 pounds of wool in 1873 to 460,000,000 pounds in 1884, an increase of 64 per cent. In Argentina this line [indicating] represents the increase during the same period to have been 35 per cent. In the Cape of Good Hope the increase was 60 per cent. Great Britain, the only country in the Northern Hemisphere which I take for comparison which has climatic conditions like ours, sustained a decline of 19 per cent in her wool clip. In the Southern Hemisphere they have pasture all the year round, and no winter feeding is required. In Great Britain the sheep are fed in winter as they are in the United States. They are fed crops, and crops are labor. It costs nothing for the sunshine to grow crops. The labor of tilling the soil and of harvesting the crops is 90 per cent of the cost of the crops. Allowing 10 per cent for interest and taxes, the other 90 per cent is the labor. Therefore the sheep in the United States and Great Britain during the winter months are fed labor, so to speak. What was the result? England on a free-wool basis could not compete with her own colonies, and there was a decline in her production of wool, as stated before, of 19 per cent. Now, what took place in the United States at the same time? At that time we had the tariff law of 1867, with duties of upward of 12½ cents per pound on unwashed wool of the first class.

It was under this period the last four years of which our wool clip increased 25 per cent. During the years here selected for comparison, which end with the tariff law of 1867, the United States increased its whole clip from 170,000,000 to 340,000,000 pounds. We increased 100 per cent. We beat the world; and what has been done once, under similar conditions can be done again. The duty of over 12½ cents of the law of 1867 shows what adequate protection will do. If 70,000,000 people could be informed of these facts, if we could have access to their patriotism and their good common sense, if they would only read one-half of what has been ably written, they would quickly restore that portion of the sheep industry that inadequate duties have destroyed. This other diagram is the same, except that it goes further, and with the reduction of the tariff to 10 cents in 1883, coupled with those evasions of the tariff before alluded to (which deprived the wool-grower of his home market and resulted in the closing of our mills, when superfine worsted cloths came in at lower duties than the commonest shoddy goods), the effect upon the American woolgrowing industry was quickly shown. It was like the barometer before a storm; we let foreign manufacturers make for us the goods that had heretofore been made here. Every other nation then increased its wool crop. Even Great Britain, whose flocks had previously been declining, as has already been shown in the previous diagram, as soon as her manufacturers captured our markets increased her flocks to supply wool for goods to go to America. Perhaps the only woolgrowing country in the Northern Hemisphere where the conditions are at all parallel to ours is England. But their winters are more favorable than ours for sheep raising, for there so soon as the snow melts the flocks can be turned out to pasture. Here our sheep, in the Northern States east of the Missouri at least, have to be fed crops almost all of the winter. Our pastures are frozen dry.

#### FREE WOOL AND PROTECTION PRICES COMPARED.

We next come to the comparison of prices for wool between London and America, from 1868, the year after the tariff law of 1867 was passed, up to 1891. This is an old paper which I used before the Ways and Means Committee of a former Congress when Mr. Springer was its chairman. I reproduce it because it is pertinent to this question. We take a fine medium fleece of half-blood merino quality and compare it with the New Zealand crossbred of the same kind, quality, and shrinkage. We compare the price in America from 1868 to 1891 with the price in London of wool of the same quality, during all of which period the duty was 10 cents per pound or over, and we find the American price was more than double the London price. In other words, the London price during that period averaged 51 per cent below the American price.

Now, it will be stated that we had a premium on gold during part of that time. That does not appear to have made any difference in this average price, because the period I have taken—from 1868 to 1877, when there was a premium upon gold—shows that the London price was 50.95 per cent lower than the American price; and from 1878 to 1891, the London price, when we were on a gold basis, was 51.32 per cent lower than the American price. The two periods, figured together, show the London average to have been 51 per cent below the American average. I wish to call your attention to that particularly, because in making the new law the question of percentages may be presented by the

The Production of Wool in Countries named during the last 24 years. 1873-1896.

ingenious free-trade gentlemen on the other side in such a way as to alarm you into a state of semipanic.

The tariff question presented in this way seems to give protectionists a sort of chill. I wish to impress upon you the fact that the price of wool in London for this long period of years was less than half the American price, 51 per cent less; or, in other words, the American price was 102 per cent higher than the foreign price. No wonder the flocks increased. Major McKinley is President-elect of the United States to-day because, through good and ill repute, he had the courage to stand up for protection that would protect, be it 50 per cent or 100 per cent. Any duty that falls short of covering the difference between the American and foreign wage or cost of production is only a revenue duty and is not in any sense protection.

The framing of any tariff law that will be permanent must deal with the rapid increase in the world's supply of wool, which, in all probability, will continue at the same rate for ten or twenty years to come.

This table is partly the copy of a chart furnished by Messrs. John L. Bowes & Bro., of Liverpool. In it the wools of the Southern Hemisphere are reduced to the scoured condition, because some of them in scouring shrink 75 and some 80 per cent, and others only 40 and 45 per cent from the grease condition as sold by the grower, and a comparison of the grease condition would be misleading. This condition [displaying a sample of scoured] always determines the price of wool in the grease. The grease price is based upon the yield of scoured wool like this sample [displaying].

The wool clip of Australia alone, since 1873, notwithstanding a recent temporary decline on account of a severe drought, shows a steady increase from 110,000,000 pounds of scoured wool in that year to 310,000,000 pounds in 1896, an increase of 200,000,000 pounds of clean-scoured wool, equal to 182 per cent. You see there was a decline of the River Plate for several years, yet an increase from 80,000,000 pounds in 1873 to 150,000,000 pounds in 1896, or  $87\frac{1}{2}$  per cent increase in that time. (The diagram contains 72 per cent increase; it should read  $87\frac{1}{2}$  per cent.) The Cape of Good Hope increased 43 per cent during the same period. The increase in the world's wool supply decreased the world's wool price. This is indicated here by the inclining line downward [indicating on chart], showing the decrease in price as the result of the enormous increase in supply. In consequence of this prices for scoured wool fell from 55 to 35 cents. Prices fluctuated, and if each separate year were indicated it would require a zigzag line; but the incline, with brief interruptions, is always steadily downward. That enormous increase in the supply is therefore the cause, and the fall in price is the effect. This is the price of wool in 1873 on the left of the chart [indicating]; this is the increase in the supply on the right. Ohio XX wool in 1891, one year after the McKinley law was passed (although the price was lower then than in the previous year), cost 73 cents scoured clean.

In March 1895, when we began to buy foreign wool freely in London, Ohio XX scoured had fallen to 35 cents in the United States. This was also about the value of wool of the same kind and quality in markets of the world. The same class of wool in London in 1891 was worth under 40 cents, while it was worth 73 cents in the United States; but by February, 1895, after the free-wool bill induced our manufacturers to buy wool in Europe, the price immediately began to go up over there. So you see the increase in the world's supply depressed the foreign price until wool was put upon the free list and foreigners had secured the

American market. Skirted Australian wools were then much cheaper landed here than the best American wools. The American woolgrower, unaccustomed as he was to the low foreign prices, refused to sell on the London basis, and our manufacturers turned their backs on him and supplied themselves abroad. Free-trade members of the Committee on Ways and Means (who were in the majority at that time) told the domestic grower that wool prices would be higher under free trade than before, and they were not prepared to take half price. They held their wool; many of them have it yet. The mills are closed, and the moths are eating it, because there is now no home market for it. Enormous quantities of foreign wool have been bought by the United States, and the effect on the London price was to put it up. It was then thought that the Dingley bill was going to pass; even people outside of the wool trade began to speculate in wool, and manufacturers also purchased in advance of their needs. Of course, the effect was shown in the slight rise in price, but many of those who bought their wools in that period of speculative excitement still have it for sale, and it is a question whether moths will destroy it before you can make a new Dingley bill for 1897.

Mr. DOLLIVER. It lies between the moths and the Senate, it seems.

Mr. JUSTICE. It is a race, with the moths at present a good ways ahead.

This diagram shows that the average price of the best bred Port Phillip wool, in London, in ten years ending 1894, was 21.70 cents; American XX Ohio (which is not so valuable), for the same ten years averaged 31.22 cents. American wool was worth  $9\frac{1}{2}$  cents more in Boston, New York, and Philadelphia than the best Port Phillip wool was in London. That was under a fair tariff. The price to-day of American XX Ohio wool, instead of being 31.22 cents, as it was for the ten years ending August, 1894, is worth 18 cents. (See Chart D in following pages.)

Mr. TURNER. Where?

Mr. JUSTICE. In Boston, New York, or Philadelphia; 18 cents under free trade, instead of an average of over 31 cents under ten years of protection, but on the 1st of April, 1896, this Port Phillip wool [indicating] had advanced in London from 21.70 cents to 24 cents, so that while Ohio XX, washed, under ten years of protection was  $9\frac{1}{2}$  cents higher in America than the best Port Phillip was in London, it was 6 cents lower in New York than Port Phillip was in London with free trade in wool in this country.

I repeat, that it may be impressed upon you, that instead of American XX Ohio being worth 31.22 cents, as it averaged during the ten years which ended with 1894, it had fallen on April 1, 1896 to 18 cents, and the best unwashed Port Phillip, which had averaged in London only 21.70 cents during the ten years ending 1894, on April 1, 1896, was worth 24 cents in London. So that, under protection XX Ohio wool (less valuable than the best Port Phillip) averaged  $9\frac{1}{2}$  cents higher under protection in America than the better wool averaged in London; after eighteen months or about that of free trade, the position was reversed and the Ohio wool was worth 6 cents less under free trade in New York, Boston, and Philadelphia instead of  $9\frac{1}{2}$  cents more, as it was under the McKinley law.

Mr. TURNER. Can you tell us the price of Australian wool fleece at this time?

Mr. JUSTICE. Yes, sir; 22 cents for Port Phillip superior greasy. It is now worth 2 cents less than in April, 1896.

Mr. TURNER. Where?

Mr. JUSTICE. In London and all over the world. The freight from London to New York is only one-fourth cent per pound.

Mr. TURNER. What would it be in Australia?

Mr. JUSTICE. The freights are about one-half or three-fourths of a cent by sailing vessels, it might not be over one-half to three-fourths of a cent without counting any insurance.

Mr. TURNER. You do not believe what Judge Lawrence tells us, that it is worth 9 cents?

Mr. JUSTICE. I prefer not to discuss what he said. He was not alluding as I was to the most valuable quality in Australia.

Mr. TURNER. Tell us what you think it would be, 22 cents less the freight of one-half or three-fourths of a cent for whole fleece?

Mr. JUSTICE. Yes, sir; the difference in freight, not counting insurance, would be the only difference. This Port Phillip wool in London to-day is worth 22 instead of 24 cents as on the 1st of April, and it would be safe to say that the difference in freight and insurance would be the only difference in price between London and Australia at the same time. There is quick communication by cable and what takes place in London in the morning is known in Australia before business begins on the same day.

Mr. TURNER. If wool of that kind, whole fleece, is worth 9 cents in Melbourne it would be worth  $9\frac{3}{4}$  cents in Boston?

#### SKIRTED FLEECES.

Mr. JUSTICE. Yes, sir.

The CHAIRMAN. What is the difference in value between the skirted and unskirted—in other words, how much does the simple skirting of that wool increase its value, measured in percentage?

Mr. JUSTICE. It increases it in this way: The skirts are stained wool. They are around the extremities known by various commercial names which it is not necessary to mention; and while they make as good goods as the other, they never can be made white, and other things being equal, their use is limited to manufacturers who have to dye their goods dark colors. If you limit the number of buyers you lessen the price. That is, the price becomes lower, because while men who use dark-colored wools would be just as willing to have the skirts, men who use light colors are barred from using them. Further than that I can not answer the question, because I am not familiar with the value of the skirts alone. There are gentlemen in this room who know all about it, and I do not care to trespass on their ground. I shall take up enough time to tire your patience in discussing subjects with which I am acquainted; but I do not think the difference is much. Are there any gentlemen here who would volunteer the information?

Mr. MOSES. The skirts are not only stained and discolored, but are coarser. The increase in value of top wool is 5 per cent.

Mr. JUSTICE. I should also say that the manufacturer who would use the top of the fleece to make a fine quality of goods would have to resell the skirts when they were coarse. If he bought American wool he would have to take into consideration the fact that he would have to resell the coarser skirts to somebody who used a coarser grade of wool.

The result of free wool has been that the decline below the average price for the ten years ending in 1894 was 42.34 per cent in American

wool, and the advance in London during the same period was 10.59 per cent (see Chart D annexed), and if the London market for the Port Philip had remained at 21.70 cents, as it was at the end of the McKinley period, and if it had not advanced over 10 per cent, Ohio XX wool, which fell from 31.22 cents prior to 1894 to 18 cents in 1896, would have fallen below 15 cents instead of only to 18 cents. The advance in the London market is all that kept it from going down below 15 cents, which was the London value of Ohio XX washed during the ten years ending with the McKinley period. In other words, Ohio XX washed would have been worth no more than 15 cents in Boston, if Port Philip had remained at 21.70 in London, as it would if the removal of the McKinley wool duties had not made it an inducement for American manufacturers to discontinue the use of domestic wool and to use foreign in its place because the latter was the cheapest.

The CHAIRMAN. Ohio has a heavier shrinkage than the Port Philip?

Mr. JUSTICE. Yes; it is more desirable when skirted and scoured clean, because it is a stronger wool, but its commercial value in the condition when sold by the farmer is less than skirted Port Philip, because of the skirts which the Ohio fleece contains.

I want to say one word here of the practice which has grown up among American farmers, which is a great disadvantage to the reputation of their fleeces, and which has given American wools a bad name in Europe and here. It is customary with them to tie the fleece up with six strings or sometimes with binding twine or sisal cord, with a big knot on each string. The manufacturer in determining the price of the wool has to make an allowance for the twine which is of no value, but which he pays for at the wool price. Australian wool has little or no twine; but that is not the worst. The American wool-grower thinks he is entitled to wrap up inside of the fleece everything that is on the sheep when shorn. When the sheep is washed it takes a week or ten days for the fleece to dry before it can be clipped, and parts of the fleece become soiled and particles of dung adhere to the breech locks. The farmer sometimes rolls that dung up inside the fleece. When a buyer comes into a wool store to look at it he cuts the strings on the fleece to see if there is any filth inside of it.

The practice of skirting wool avoids this and has grown in obedience to the demand of the manufacturers, not of the United States alone, but of the manufacturers of the world, and the practice is increasing and will in time be universal. The percentage of skirted wools in the world's supply is already so large that if a penalty were placed on skirted wools and a lower duty on wools not skirted nearly all that is imported would come in at the lower duty. For instance, at a duty of 10 cents on unskirted and 12 cents on the skirted, all or nearly all would come in at 10 cents as unskirted. Appraisers at the custom-houses could not always tell which was which.

Mr. McMILLIN. Mr. Moses stated that skirting only amounts to 5 per cent; and yet by this proposed rate of duty, 10 and 12, you make a larger difference.

Mr. JUSTICE. I only state this difference to illustrate that such a law could not be administered. The man who was honest and fair, and who fairly entered his skirted wool as skirted, knowing them to be such, would be at a disadvantage with an unscrupulous competitor. A few people in the world, unfortunately, still exist in importing commercial circles who are willing to swear to false invoices.

## LOCATION OF SHEEP IN THE UNITED STATES, 1870 AND 1896.

[From official reports of United States Census.]

*West of the Mississippi River.**East of the Mississippi River.*7,418,000 sheep.  
26 per cent.

1870

21,060,000 sheep.  
74 per cent.28,478,000 sheep.  
100,102,387 pounds wool.

[From estimates of National Association of Woolen Manufacturers.]

*West.**East.*24,273,131 sheep.  
67 per cent.

1896

12,191,274 sheep.  
33 per cent.36,464,405 sheep.  
272,474,708 pounds wool.

Mr. Turner has asked about the number of sheep east of the Mississippi River, which question has a bearing on the mutton-sheep industry producing coarse wools. In 1870, 74 per cent of the sheep of the United States were located east of the Mississippi River and only 26 per cent were west of that river.

Previous to that time millions of buffaloes ranged over the plains, and the savage Indian there held sway. When the Indians were being gradually placed on reservations, Uncle Sam, who is a great shepherd, had many pastures, one of which was called Illinois, another Michigan, and another Ohio, and other States represented his pasture fields. He had enterprising sons, some of whom, at the risk of losing their scalps, went into the wilderness to develop other and new pastures. That son from Michigan drove his flocks out from that old pasture on the prairie and found his way into what is now Wyoming or Montana, which to-day is our largest woolgrowing State. Some went from the other older States to other new sections. While Uncle Sam's flocks were rapidly increasing and multiplying as a whole, their location was shifting. Those from the old pastures east of the Mississippi were transferred to the new pastures west of the Missouri. It has been claimed by free traders that because the flocks had been moved from the old pastures east of the Mississippi that I have referred to, to the new pastures that they had ceased to exist; that under protection sheep were decreasing, when, in point of fact, those flocks had not only been moved, but had increased at the rate of 25 per cent in four years. Those who advanced these views (and they were the favorite arguments of free-wool advocates) closed their eyes to the steady increase in the entire flocks under protection and pointed only to the old and empty pastures as conclusive evidence that protection did not protect. They were jubilant over a supposed important discovery. In point of fact, the United States under adequate protection were then increasing their flocks faster than any other nation in the world.

To-day only 33 per cent of our sheep are east of the Mississippi, and 67 per cent are west of the Mississippi. There is a cause for this. The Merino sheep can be herded in large flocks; 2,000 or more can be cared for by one man. The big mutton sheep of English blood can not be so well herded as the Merino; they straggle and become a prey to wild beasts. Their instincts and habits are entirely different. Therefore the only sheep that can thrive and multiply in large bands in the Territories is sheep of Merino blood, immediate or remote, such as can be driven over the range and bunched in herds of 2,000. That leaves the fenced pastures east of the Mississippi mostly free for the mutton sheep of English blood, or blooded sheep bred for pedigree to improve the prairie flocks.

## CARPET WOOLS USED FOR CLOTHING.

Owing to the improvement in machinery, carpet wools are now being so largely used for clothing purposes that I make the statement, without fear of contradiction, that some of such carpet wools as were imported under the McKinley period, supposed to cost then over 13 cents, to-day do not cost over 10 or 11 cents. I allude to wools that would average 13 or 14 cents, such as Bagdad. When Judge Lawrence said the price of third-class wool was below 10 cents, he should have said the "average price" was under 10 cents. You can see how the average could be under 10 cents if the bulk of it was worth  $7\frac{1}{2}$  or 8 cents, and a minority of it 13 or 14 cents. But wools that cost over 10 cents also enter into the manufacture of the finer carpets, such as Wilton and Brussels. They are the only kinds at this time so used.

The CHAIRMAN. How much ingrain carpet is made of combed wools? We are speaking now of the range of so-called carpet wools from 10 to 15 cents.

Mr. JUSTICE. The name carpet wool ought to be abandoned. The third-class wools, which we are in the habit of naming carpet wools, costing over 10 cents, are very largely used for clothing purposes, and the name carpet wool for them is a misnomer. Their use for clothing purposes is increasing, and they will be still more largely used for clothing purposes in the future than in the past; therefore I will quote from the best informed importer of these third-class or carpet wools that I know—a man who disapproves of the duty on third-class wool. He tells me that the dividing line made in the classifications and descriptions in the McKinley law, between the so-called carpet wools used for clothing purposes and those used exclusively for carpets and low blankets, could not have been more scientifically made. That classification made third-class wool into two distinct classes. He did not know whether the convention of growers that classified these wools arrived at it by accident or by a really scientific knowledge of what was required, but the result was successful. To use his expression: "The wools of to-day costing in Europe and Asia 10 cents and under must come to America (which country makes more carpets than all of the balance of the world combined.\*)" There is no other market for all of them. If the McKinley dividing line was lowered from 13 cents to even 9 cents, the price on the other side would fall until the real carpet wools could be sold under the lowest carpet duty admitting them to the American market. In other words, if the duty was so adjusted that they would have to come in at a valuation of not over 9 cents, it would only be a question of a short time—possibly one year—before the foreign owner would have to take 9 cents from his American buyer. This is a case where the foreign shipper must pay the duty as the price of the American market.

But to go back to the subject of the location of our sheep. The decrease of the sheep in the sections east of the Mississippi River was because the large-carcass sheep (the mutton sheep), which produce coarse wool, can not be raised on a free-trade basis at a price that will enable them to be raised for wool at the present price and mutton at the present price. Cheap imported carpet wools, costing 10 cents, make that unprofitable. That is why those flocks have been so rapidly decreasing in Uncle Sam's pastures east of the Mississippi. The question of adequate protection for mutton sheep is involved in the carpet wool or third-class wool costing over 10 cents, and in my judgment that is a matter that needs the careful consideration of your committee. The mutton-sheep industry has been destroyed in the sections east of the Mississippi more rapidly than in any other, and needs your care.

The reason why the McKinley dividing line on carpet wools may be reduced from 13 to 10 cents is because wools of the third class, costing over 13 cents in 1890, to-day will average nearly 3 cents a pound less than they did when the McKinley law passed. These finer carpet wools have been from 1 to 2½ cents below present prices. (See right-hand column of table "Lowest and highest wool prices compared" (from circular of Messrs. J. L. Bowes & Bro.) at bottom of p. 177.) The dividing line to-day of 10 cents would be fair to all interests.

The CHAIRMAN. That is, you advocate changing the dividing line of carpet wools from the limit under the act of 1890 from 13 to 10 cents, and you do it on the ground that there has been a decline in the price of carpet wools nearly to that extent?

Mr. JUSTICE. Yes, sir; I do. There is ample proof to back up the statement in the following quotations from the Liverpool circulars of Messrs. J. L. Bowes & Bro. of October, 1890, and of January, 1897:

*Decline of 2.35 cents per pound from October, 1890, to January, 1897, on the forty-nine qualities of carpet wool, all of which were worth over 13 cents in October, 1890.*

[From the Liverpool circular of Messrs. J. L. Bowes & Bro., first-class authority on third-class wools.]

[Grades marked C. and C. are used both for clothing and carpet purposes. Grades marked K are used almost entirely for clothing purposes. Grades not marked are used mostly for carpets.]

Average decline in price since 1890, 2.35 cents.

a Higher.

The CHAIRMAN. And those wools you say, valued above 10 cents, which are now valued at about 13 or 14 cents, are used largely for clothing purposes and not for carpets?

Mr. JUSTICE. I believe the finest of them, such as Bagdad wools, enter into some form of clothing or blankets, and a minority, only a very decided minority, enter into the construction of carpets; but, as I have said before, the manufacturers of the higher grades of carpets, such as wiltons, etc., can use nothing inferior. Their wools may all cost over 10 cents.

The CHAIRMAN. How about carpet wools valued at less than 10 cents? Is there any portion of it of any material amount that could be used for clothing purposes?

Mr. JUSTICE. I do not think they are available to any important extent for any purpose except ingrain carpets or low-grade blankets. An exceedingly cheap garment may be made to sell, but not to wear; but without some better wool to hold it together it would not be serviceable. The hair in a cow's tail is more like the wools now costing very considerably under 10 cents. I have in mind some Kalmuck wool which I once handled. It was much like the tuft at the end of a cow's tail. There is nothing in any portion of an American fleece that is so coarse as that. Hip locks and tags, and such portions as Judge Lawrence has described, which were formerly used in carpets and largely so used, are too good for anything to day but the higher grades of carpets, and with this exception they enter now into clothing more largely than into carpets.

Mr. DOLLIVER. The law of 1890 sought to depart from the specific rate on this third-class wool, and substituted the ad valorem rate.

Mr. JUSTICE. Would you like to know why that was done?

Mr. DOLLIVER. Yes.

Mr. JUSTICE. The convention of woolgrowers and carpet manufacturers that framed the McKinley law consisted of experts. They agreed unanimously (with the exception of Judge Lawrence) to a specific schedule on all wools, which Major McKinley agreed to accept on condition that this commission should agree to it unanimously. I think before it went to the Senate, the carpet manufacturers, after having agreed to specific rates, objected to this agreement, and the convention was reassembled to adjust that one feature, and as a matter of

compromise the woolgrowers decided to agree to the change from specific to ad valorem rates on third-class wools only, in order that that bill could go through, for without that unanimous agreement, Schedule K, so excellent in other respects, would have failed. It was a matter of necessary compromise. Therefore, on wools costing 13 cents and under a duty of 32 per cent was agreed upon, and 50 per cent was imposed on wools above that. If you take the altered conditions of to-day and make the duties specific, I claim that  $2\frac{1}{2}$ , or 3, or 4 cents, or whatever you collect from carpet wools which cost less than 9 or 10 cents, will be purely a revenue duty, and it does not affect the question of protection in any way. We do not now and probably never will produce cow tail wool. It becomes, therefore, only a question of revenue. The American woolgrower would not be injured in the least on wools of the third class only, costing under 9 cents, if there was no duty at all. This proposition for free wool does not apply to wool of the first class, much of which sells at 8 cents.

The CHAIRMAN. Why do you say that the carpet wools costing less than 9 or 10 cents are not likely to be grown in the United States?

Mr. JUSTICE. It would not be profitable to raise them here. They are raised in barbaric countries by nomads who live in tents; Asiatic tribes principally. Some in China. They know nothing of the theory of improving the wool by breeding sheep, and anything they can get for their rough wool they are glad to take. As I said before, if you will make the dividing line 9 cents instead of 13 cents, as under the McKinley law, these cow tail wools will accumulate abroad until the very weight of their accumulation will break the price to 9 or 10 cents, when they will come to the United States subject to the rates imposed by the new law.

Mr. McMILLIN. You speak of a convention that considered Schedule K of the law of 1890. Who constituted that convention?

Mr. JUSTICE. That convention was composed of the most representative woolgrowers and manufacturers that could be named—the most representative in the United States.

Mr. McMILLIN. You say that Mr. McKinley agreed that if they would agree unanimously among themselves that he would put into his bill the schedule they made?

Mr. JUSTICE. Yes, sir. It was made by experts who knew their business. The woolgrower who wanted of the manufacturer a high price for his wool and the manufacturer who wanted to buy that wool cheap. They sank their greed and framed Schedule K. If all laws were so framed we would have a permanent tariff. Under its practice I wish to say both woolgrowers and manufacturers were prosperous and contented. The evidence of it is that the manufacturers used up the entire clip of American wool and also increased their imports of wool, and the cost of woollens to the consumer was lower than ever before.

Mr. McMILLIN. It would be strange if they would not prosper if they framed their own schedule.

Mr. JUSTICE. While they were all prospering and increasing the use of wool, and making a better market for wool, as I said before, the cost of clothing was decreasing to the consumer. I contend that Schedule K of McKinley law was wisely drawn, was a good schedule; it oppressed nobody, and the fact that the American flocks increased enormously under it, disproves the statement which my esteemed friend, Judge Lawrence made, that it was not protective. The woolen manufacturers did not make excessive profits. The duties that were imposed by the McKinley law (which I will treat of when I come to compensatory duties)

were so skillfully adjusted that manufacturers prospered under them. But when the compensatory duty fell with the removal of the duty on wool—the only specific duty of the McKinley law—and they were thus left with nothing but ad valorem duties of 50 per cent (only one-half or one-third of which could be collected and which was expected to protect American wages which are over 100 per cent higher than in Europe), is it any wonder half the mills are closed?

Subsequent experience with the Wilson law shows the wisdom and the scientific arrangement of Schedule K of the McKinley law, because when the specific portion of it was removed American manufacturers were quickly flat on their backs. Their mills soon closed, and the American grower lost the only good market for his wool that he had ever had.

Mr. McMILLIN. As a matter of fact, the manufacturer got the benefit of a portion of the specific rate that was imposed for the alleged benefit of the woolgrower?

Mr. JUSTICE. He did, although he did not know it at the time, and I will make that plain when I come to the question of compensatory duties.

Mr. McMILLIN. Before we depart from that, or at whatever time suits your convenience, will you kindly give the committee the rate of the two kinds of wool that you have contrasted—the Ohio fleece and the Port Phillip wool. If you can, give it for 1870, 1875, 1880, 1885, 1890, and 1895, or 1896—the last complete year I believe is 1896.

Mr. JUSTICE. It will appear in what I submit in a number of different shapes.

Mr. McMILLIN. Very well.

Mr. JUSTICE. You will find that no matter how we try this, it always comes out the same way, viz, that the London price as near as may be for a series of years averaged less than half the American price, or, since the question of high percentages must be met, the American price was over 100 per cent higher through a period of years than the London price.

A VOICE. Until lately.

Mr. JUSTICE. Until the repeal of the McKinley law was discounted.

Now, to recur to the diagram which showed the increase in the world's supply. I have a table which I will submit which gives the lowest price in the London market in the last ten years compared with to-day's price.

*Lowest and highest wool prices compared.*

|                                           | London extremes during ten years prior to 1895. It shows that the lowest price in the London market (for Port Phillip wool) was 5 cents a pound lower than the price in London to-day. It advanced 5 cents per pound in London inside of the first calendar year of free wool, and if you take this scoured wool (the same wool cleaned), this latter has advanced 30 per cent in London from the lowest point since the repeal of the McKinley law. The lowest point was reached in London, as I have just said, about the time the free-wool law was passed. We almost immediately began to permit foreigners to unload upon us their accumulation of years, and prices soon advanced from their lowest price on record, 5 cents per pound on the best grade of Australian grease wool.

Mr. DOLLIVER. Why do not our people send our wool over there?

Mr. JUSTICE. Americans have tried it at Bradford, England, Leipsic, Antwerp, on the Continent, and in London. American wools that averaged  $8\frac{1}{2}$  to 10 cents in America, to American manufacturers, sold at the same time over there at 4 pence, or 8 cents of American money, and I have an extract here from a Bradford newspaper on the subject which I will submit with my tables and diagrams.

Mr. DOLLIVER. You mean after it was scoured?

Mr. JUSTICE. No. I mean in the grease, as the farmer sold it. In this shape [indicating] it brings here in America from  $8\frac{1}{2}$  to 10 cents, and averages about 9 cents. Under the McKinley law it ranged from 17 to 21 cents. That class of wool in Leipsic, Bradford, Antwerp, and London, sells now at 4 pence, and it is hard work to sell it at that price. So you will all see after a trial of foreign markets that the American market is the only market of any value to him that the American woolgrower has, and when that is closed to him, as it is to-day—

Mr. DOLLIVER. You say 4 cents; don't you mean 4 pence?

Mr. JUSTICE. I mean 4 pence, English money, equal to 8 cents American money.

You will find in my printed papers herewith some exceedingly interesting criticisms from European papers on the American wools which have been sent there for sale, notably that from the Yorkshire Factory Times. They want to sell wool to us, and don't mean that we shall invade their market.

Mr. TURNER. Why is this Ohio wool, to which you refer us, put up in such dirty shape? Is it a necessity of the situation there?

Mr. JUSTICE. Not at all; it is the result of a slovenly practice here. I am glad to say that some growers put their wool up right and well, but they are not the majority of them. The American manufacturer wants American wool. There is a gentleman in this room that buys a certain quality of so-called XXX, which is now scarce. It is the best wool in the world for his purpose, and the wool dealers save it a fleece at a time until they accumulate a quantity large enough to ship. It is the kind raised by Hon. John McDowell, of western Pennsylvania, and Mr. Clark. The latter has just addressed you. Millions of pounds of it was sold under the tariff laws of 1867 and 1883. We call it "picklock" wool; it grows on sheep of the Saxony breed. The home of such wool was in the valley that is drained by the Ohio River. That is to say, West Virginia, western Pennsylvania, and southern Ohio, the homes of these gentlemen.

#### SHODDY, ETC.

The subject of shoddy comes next in order. During the McKinley period the annual import of shoddy, mungo, waste, rags, and such wool adulterants, averaged annually less than a quarter of a million pounds. The Wilson law went into operation on raw material in August, 1894, and although shoddy, waste, etc., were classified as "manufactures of wool," and these schedules could not legally go into operation until the following January, the Secretary of the Treasury arbitrarily ruled that the McKinley prohibitive duty on shoddy, rags, waste, etc., should cease with the duty on raw wool.

During the first four months of the Wilson law and between September 1, 1894, and the 31st of December over 4,000,000 pounds of these wool adulterants were imported. This 4,000,000 pounds of shoddy and waste took the place of three times that amount of American wool. Shoddy is made of rags and other adulterants, which once having been cleaned, does not require rescouring. It is put through machinery which dusts it and partially cleans it. It is then practically clean wool. A pound of rags is almost equivalent to a pound of some kinds of scoured wool.

In the first full calendar year of the Wilson-Gorman law we imported 20,718,110 pounds of shoddy, rags, waste, etc., an increase of 8,265 per cent over the average of the McKinley period. This 20,000,000 pounds or more of shoddy would be equal to 60,000,000 pounds of unwashed Montana or Texas wool. It would take the sheep in the State of Montana (which is now our largest wool-growing State) three years to produce enough fleece to make the quantity of clean-scoured wool displaced by this 20,000,000 pounds of shoddy and waste which came in during the first calendar year after the Wilson law was passed.

It was stated by the statesmen who advocated the repeal of the McKinley law that free wool would mean such cheap wool that there would be a decreased use of shoddy. Have these predictions been fulfilled? Previous to the repeal of the McKinley law there was very little shoddy imported. The shoddy then used in America was made from American rags, and there were less than 250,000 pounds of shoddy, etc., imported in an average year. The Wilson-Gorman law went into effect four months before the close of 1894, and during the last four months of that year the imports of shoddy had increased to over 4,000,000 pounds, and during the first full year of the present law over 20,500,000 pounds of shoddy, waste, rags, and other such wool adulterants were imported.

The increase over the whole McKinley period was over 20,000,000 pounds, an increase of over 8,265 per cent, and instead of using less shoddy American manufacturers are

now using more than ever before. And why? Because of the loss of the home market for woolen textiles (shown in Schedule B), our manufacturers were compelled to lower their prices for their woolen product, and in no other way could they do this except by the use of shoddy; and although the price of pure scoured wool had fallen nearly one-half, or from 65 cents to 35 cents, the foreign competition was so keen that nothing but a tremendous use of shoddy would enable them to run their mills at all; and notwithstanding this enforced adulteration of their goods by the use of shoddy, they still lost the best portion of their home market, as shown in Schedule B. Some idea of the proportion of the imports of shoddy in 1895 compared with the McKinley period will be seen by examining the parallel black lines in Schedule C.

*Imports of manufactures of wool in shoddy, waste, rags, etc.*

The CHAIRMAN. How do you explain the increase in shoddy after wool was on the free list? The old theory was that shoddy would be imported when wool could not be so easily imported. But it seems that with free wool there was a large increase in the use of shoddy.

Mr. JUSTICE. It is very simple. The duty on shoddy was about the only one that was prohibitive in Schedule K. Under the McKinley period the high duty kept it out, and then only about 247,000 pounds annually came in, and we used no other shoddy in America except such shoddy as was made from American rags—cleaner rags than any imported rags. There never was a period in the history of this country, or history of any manufacturing country, when such a large proportion of pure wool was used in America as during the McKinley period.

Mr. TURNER. I understand that there is a factory in Cleveland using shoddy that ran every day under the operation of the McKinley Act and that this same factory under the Wilson bill has not run more than one day a week.

Mr. JUSTICE. I know nothing at all about that factory.

I wish you [addressing Mr. Turner] to pay particular attention to this matter, because I was before the Ways and Means Committee when you assisted in framing the Wilson law which has so greatly stimulated the use of shoddy. I want to repeat the statement that there never was a woolen manufacturing nation in the world that used so little shoddy as the American nation during the McKinley period. And the proof of it is in the fact that we used then only a quarter of a million pounds of imported rags, shoddy, waste, and such adulterants, as against over 20,000,000 pounds in the first full calendar year of the Wilson law.

Mr. McMILLIN. Do you mean imported shoddy?

Mr. JUSTICE. This 20,000,000 pounds was all imported.

Mr. GROSVENOR. I would like to add that it is within my knowledge that the owners of the Cleveland mill referred to are very anxious that there shall be no tariff put upon shoddy at this time. This reached me to-day officially.

Mr. JUSTICE. The chairman asked me about this enormous increase in shoddy. Under the McKinley law, a woolen-mill hand had steady employment and earned \$10 a week, and could buy an all-wool suit containing no shoddy for \$10, with the proceeds of one week's labor. Owing to the closing of the mills (the result of the Wilson law)

which did not average half time in 1896, notwithstanding the advantage of free wool, he earned only \$5 a week. The fixed charges for fuel and provisions for his table and rent which go on nights and Sundays, absorbed all of the \$5 which he has earned, and he has had no money left with which to buy clothing, not even shoddy clothing. And men who made \$10 all-wool suits out of 55 cent scoured wool, under protection, could not sell them even with 30 cents scoured free wool.

Shoddy goods came in from abroad as never before, and \$5 shoddy suits made of cheap imported goods were in the stores. Our manufacturers had to make \$5 suits to compete. They could not make them out of pure wool, even cheap free wool, they had to use shoddy, and the result was that there was a good, brisk, keen market for foreign shoddy and a narrowed market for pure wool. Free wool which was to "widen our market," narrowed our market so that half of the mills closed, and many of those which did run, used shoddy where under the McKinley law they used only pure wool.

Mr. McMILLIN. Have the sales of the better grades of wool or the price increased or decreased under the operation of the Wilson bill?

Mr. JUSTICE. This diagram shows the decrease in price [indicating]. As to sales, I deal mainly in domestic wool. My sales of American wool for the first year of the Wilson law were reduced one-third, and my sales for the second year of free wool were reduced one-half below the average of the McKinley period. The McKinley law made it an inducement for our manufacturers to use domestic wool. The Wilson law gave our home market to the foreign woolgrower.

Mr. McMILLIN. What I am asking is the effect upon the value or price of goods—woolen goods—whether such goods diminished or increased in price by the operation of the Wilson bill.

Mr. JUSTICE. Of course they decreased in price to the extent of 25 cents per pound on the scoured wool, and they were also further lowered in price by a greater use of shoddy. They were thus nominally cheapened by the use of shoddy, but in reality they were dearer to the wearer in so far as they relate to shoddy.

Mr. McMILLIN. To what extent?

Mr. JUSTICE. Such a suit as I have on contains about 3 pounds of pure scoured wool—no shoddy. It is impossible to use shoddy in worsted yarn. The difference in the cost of such a suit is about 75 cents below the McKinley price. That is the difference made between the use of 30-cent free wool scoured and 55-cent protected scoured wool.

Mr. DOLLIVER. Do you mean the price of the cloth at the factory or the price of the suit of clothes to the purchaser?

Mr. JUSTICE. This is a cheviot suit made of coarse combed or worsted wool. It is coarser than this merino sample [illustrating]. It is about such wool as grows on Shropshire sheep. Around the Mediterranean there are carpet wools from which wool has been imported to make cheviot suits. You know that on the ribs of the sheep there is found a finer fiber of wool than on other parts of the carcass. Measured under a microscope the diameter of the fiber would be less than the diameter of fibers of wool grown on the hips or back or neck or on other parts. The law of 1883 was most loosely constructed with regard to Schedule K. Its faults were admirably corrected by the joint convention that arranged the wording and classifications and divisions of Schedule K of the McKinley law. Under the law of 1883 third-class or Mediterranean carpet wools were sorted in Europe and the finer portion of the fleeces, such as sorts from the ribs, were brought in and it entered into the

manufacture of knitting yarns and of chevots. So you can thus see how carpet wools can make less difference in the cost of clothing than where only merino wool is used. The difference is 75 cents between the McKinley price and the present price in the cost of the clothing I have on, the duplicate of which in wear and appearance may be made of such so-called third-class wool or carpet wool as I speak of. That is of the finer sorts off of the ribs of some Mediterranean fleeces classified as third-class or carpet wool.

Mr. McMILLIN. Seventy-five cents in the cost of cloth?

Mr. JUSTICE. In the wool now in the cloth of this suit.

Mr. McMILLIN. For the entire suit?

Mr. JUSTICE. Yes; the entire suit, exclusive of trimmings.

Mr. McMILLIN. Then the reduction under the Wilson bill has only been 75 cents for such a suit?

Mr. JUSTICE. Yes; that is all in such goods as I now wear. They are not heavy goods, but are such as a workingman would wear.

Mr. McMILLIN. Then that law has not been so destructive to clothing manufacturers as has been made out?

Mr. JUSTICE. The removal of the wool duty decreased the price 75 cents on the wool contained in such a suit.

Mr. DOLLIVER. Has that found any expression in the retail prices of the clothing a man buys?

Mr. JUSTICE. Yes; of course. There is a difference, as I have already pointed out, of 93 cents per capita. Free wool saved the nation 93 cents per capita, but it lost the nation over \$400,000,000 in purchasing power, as I have shown before. In this particular goods it is 75 cents, or 18 cents less than 93 cents, the per capita rate, because this is made of coarse wool. The per capita saving of 93 cents is for wool of all kinds, coarse and fine. There is none of this fine or merino wool [indicating] in this suit of clothes.

Mr. McMILLIN. My inquiry was as to the difference in price of the finished product, and that was your answer, I suppose?

Mr. JUSTICE. I thought some question of this kind might come up, and so I had the cloth in this suit weighed by the tailor before he made it up. It weighed 3 pounds and a few ounces. It is not the heaviest goods. It is suitable for this weather and it is the kind made up and sold to men in moderate circumstances—not fine goods.

Mr. McMILLIN. And your answer had reference to the finished article?

Mr. JUSTICE. To the difference between the price of McKinley wool and the Wilson-Gorman or free wool in this cloth. It is only the difference between protection and free trade on the raw material.

Mr. McMILLIN. What I was getting at was the difference in value of the goods to the consumer of such a suit as you have on under the McKinley bill and under the Wilson bill.

Mr. JUSTICE. The difference in favor of the consumer in such a suit as this is about 75 cents. That is less than the average annual per capita saving to the consumer, which figures, viz, 93 cents, I have previously given to the committee.

Mr. DOLLIVER. Do the tailors give you the benefit of that difference?

Mr. JUSTICE. No. This suit, when made by a wholesale clothing manufacturer, retails at \$10. I understand from the manufacturer who made the cloth that the clothier sells suits of this cloth at wholesale at \$7.50.

There has of late been lack of profit to the manufacturer, a lack of profit to the middle man, and, in fact, nobody has made any money out of it. The merchant tailor that made this particular suit got \$20 for making and trimming it for me. I furnished the cloth, which was given

to me by the manufacturer, but wholesale manufacturers sell suits made of this cloth for \$7.50, so I am told.

Mr. TURNER. If the gentleman will allow an interruption, I would like to know if the class of goods which you are wearing is not purchasable at about one-half what it was before the Wilson bill went into effect?

Mr. JUSTICE. No, sir; other things being equal, 75 cents would make the only difference in the cost before and the cost now, by reason of the difference in free or protected wool. If there is any other difference in the present cost it is made by a lessening of the profit or by actual loss to the manufacturer and of the cost of the labor element which enters into the construction of such goods. I know nothing about any other details in the cost of this suit, except the difference between the McKinley cost and the Wilson-Gorman cost of the raw wool in it.

Mr. TURNER. You do not make any estimate of the effect of compensatory duties?

Mr. JUSTICE. I know nothing about that element in this case. I have figured up the difference between the protected and free-trade prices of the wool in it.

Mr. TURNER (continuing). I mean the compensatory duty put on for the manufacturer's benefit.

#### COMPENSATORY DUTIES.

The difficulty in placing high rates of duty upon wool comes from the objection which legislators have to the necessary corresponding increase in the compensatory duties upon finished cloth. It takes 4 pounds of wool of the first class (merino wool, shrinkage 60 per cent) to make 1 pound of finished cloth. Every increase of 1 cent per pound in the duty upon unwashed wool of the first class involves an increase of 4 cents per pound in the duty upon finished cloth, without which the mills would be closed and the wool market destroyed. Owing to this necessary provision, manufacturers are barred from the importation of wools shrinking over 60 per cent. See following diagram (p.183).

Mr. JUSTICE. I am approaching that subject now, which will about conclude my remarks. In alluding to this suit of clothes something which I wish to explain is suggested. This cloth was made by a firm that were American manufacturers, under the law of 1867, and they discovered when that law was succeeded by the tariff of 1883 that they could import "worsted" at a lower duty than was paid on the cheapest shoddy goods. They went over to Bradford, England, and sent over a shipment of superfine goods, which was entered at the custom-house as "worsted." The appraisers classified them at first as woolen cloths. These goods were taken around to the wholesale dealers and the unanimous opinion among the trade was that they were commercially known as "worsted." They took them out as worsteds but paid the cloth duties under protest. The courts afterwards decided that, as the commercial name was "worsted," the framers of the tariff bill had meant that this class of all-pure wool cloth should come in as worsteds, which proved to be at a less duty than common shoddy goods. (It is impossible to put any shoddy in worsted yarn.) Finding their case strong and safe, they employed mills in Bradford, England, to produce worsteds, and sent their product to their Philadelphia selling house. When the McKinley law passed, the senior partner of the firm came to Washington to protest against higher duties. He had a suit of clothes with him by which he undertook to show how the price would be increased to the consumer if the McKinley bill passed. After the law of 1890 went into operation he found that he could not sell a single yard of his English cloth under the McKinley law. He was shut out of the American market. These goods could then be made here in America alone. He was compelled to move his machinery to America. He located about 16 miles from Philadelphia, where he established his American factory. As soon as he could get his mill in operation under the McKinley law, he issued a circular to his old customers stating that he would sell the same goods here, made of the same quality of wool, and at no higher price than that at which he sold them before in England under the lower duty of 1883.

Who pays the duty in such a case? This firm, having run their mill under free trade in England and under the McKinley law in the United States, are the best equipped persons that I know of to give an opinion as to the comparative merits of the productive capacity of the American and foreign factory operative. Some of their Bradford help followed them to America. They thus actually employed the same men on the same looms and on the same kind of goods. Their answer to the question so often asked about the comparative efficiency of such labor has been put into print. It is to the effect that the same men, with double the English pay in America, with better food and clothing, and better houses to live in here, are less efficient than they were in England. I said to the senior partner, "That is at variance with the general impression." He explained his statement in this way: On the other side, if a man leaves his loom before he weaves out his warp he can be put in jail for breach of contract. Here a man may shift his belt onto the loose pulley and stop his loom, leaving the shuttle in the warp, and clear out, and you have no redress. Here they become careless, are soon demoralized, and altogether a great deal more independent than in England. He has figured out just how much was the cost of labor abroad and here on weaving on the same goods, without regard to the material in it. I mean the same sort of weaving by the same men who had worked for him in Bradford under free trade and under the McKinley law here. In England they receive about £1 (or less than \$5) a week for weaving.

The same men in Pennsylvania, under the McKinley law, received over \$10 a week for precisely the same work—an increase of 100 per cent in wages over those earned in England; that is, a difference of 100 per cent in favor of the American workman. A similar increase over English wages is the rule all through other branches of this business. If, with your permission, I may occupy any more of your time, as that which was allotted to me has already been used up, I will come to the question of the compensatory duty, which seems to be most difficult question for those to understand who are not in the business. (See table on page 1523.)

This first sample [indicating] is a fine Montana wool of Merino blood. It shrinks 70 per cent. It yields 30 per cent of clean scoured wool like the sample [indicating.] It takes 5 pounds 5½ ounces of such wool to make a pound of finished cloth, or 1 pound 5½ ounces more than the McKinley compensatory duties provided for. Western Australia produces similar wool in great abundance, with a shrinkage of 70 per cent. It does not come to America, because the manufacturers are not willing to pay the freight on the 70 per cent of dirt. The freight on wool from London to mills in Pennsylvania 15 miles by rail from the wharf where the European steamer lands is only one-fourth of a cent per pound. With no duty on wool to-day, manufacturers here do not import any of this kind of wool. I asked why. The answer was, "Because we can not pay freight on dirt." "But," I said, "the Montana woolgrower has the same amount of dirt in his wool and he pays eight times the all-rail freight from Montana to New York that you pay from London to your mill, and you can not pay one-fourth of a cent per pound against the American growers' 2 cents per pound freight on 70 per cent shrink wool across the continent. How is it you can not use that class of Australian wool when the freight is only one-fourth of a cent per pound?" He replied, "We do not want it. We want only light-shrink wool; but we do want an ad valorem duty on wool, so that the foreign manufacturer may have our competition and will not be able to buy them at his own price, as he now does, and make cheap goods that would compete with our goods." There is nothing in this argument, for at the last London sales and the majority of all of the previous sales these skirted Port Philip wools suitable for America were 10 per cent higher, by reason of the competition of American buyers, while the 70 per cent shrink faulty wools were neglected and were unchanged or lower in price.

Now there is no tariff on wool, wools are free. No duty stands in the way of importing these faulty wools now. If our manufacturers want an ad valorem duty in order to have access to these faulty wools after a duty is on, why don't they take advantage of their privilege and import them now, when there is no duty? They have the freest access to these cheap, heavy wools to-day and they will not touch them. This disposes of the contention that ad valorem duties on wool are necessary to give our manufacturers access to all classes of inferior, cheap wools. As they do not import them when wool is free, they never will import them under any form of duty; and those who use this argument, if sincere, are deceiving themselves alone.

The next sample is XX Ohio unwashed. It shrinks 65 per cent. It is wool of the same breed as the other heavier sample from western Australia. One is grown in Ohio and one in western Australia, but if both were scoured they would look alike, and nobody could tell the difference. If the wool in western Australia was grown in Ohio it would look like that sample of Ohio. [Mr. Justice illustrated this part of his statement with various samples.] Both will show under the microscope a diameter of two thousandths of an inch. The difference

in the wools is only the difference in the characteristics of soil and climate of the different localities in which they were grown. If you would reverse the conditions, this [indicating] wool would look like that and that wool would look like this [illustrating].

It takes about 4 pounds  $9\frac{1}{2}$  ounces of this Ohio fine unwashed to make a pound of finished cloth. If a manufacturer imports this same class of wool from western Australia (with the McKinley duty of 11 cents per pound on wool and the compensatory duty of 44 cents on every pound of imported cloth, to compensate him for the duty paid to the Government on the wool used to make that cloth) it would take 4 pounds  $9\frac{1}{8}$  ounces of greasy Australian wool to make 1 pound of cloth. He would have to pay  $50\frac{1}{4}$  cents on the 4 pounds  $9\frac{1}{8}$  ounces, which is the quantity of wool required to make a pound of cloth out of such wool, which would involve him in an outlay of  $6\frac{1}{4}$  cents in duties more than the compensatory duty of 44 cents which the law allows on imported cloth. The result is he is barred from importing 65 per cent shrink wool, the duties therefore on such wool would be  $6\frac{1}{4}$  cents more than the compensatory duty on the cloth which it would make. This class of wool is not now imported to any extent even though the duty has been taken off. With freight on such heavy wool only one-fourth cent per pound from London to America, the manufacturer does not want it, therefore it is safe to conclude, as already stated, that if he will not have it when there are no duties, he will never want it under any sort of ad valorem duties. But the point is, that if he did import such inferior West Australian or similar wool he would be out of pocket  $6\frac{1}{4}$  cents below the compensatory duty on every pound of cloth manufactured from such wool.

Now, this is a sample of a lighter shrink wool, and of course the compensatory duty required would be less. This sample corresponds to Buenos Ayres, Lower Australian, and Cape of Good Hope wool, although it is New York or Michigan heavy fine washed, shrinking 60 per cent and yielding 40 per cent of clean scoured. It takes 4 pounds to make a pound of finished cloth, and the importer would have to pay 44 cents duty on the wool. This is the heaviest class of wool that could be imported under the McKinley arrangement of compensatory duties.

This brings us to the wools which are skirted, which are the only kinds of merino wools now largely imported under free wool, and the only kind that ever will be largely imported. The compensatory duty on cloth when less than the duty the wool required to make such cloth makes wool of 60 per cent shrinkage the dividing line, or in other words, wools yielding 40 per cent or more of clean scoured wool, are the only ones that are used in America with a compensatory duty on cloth.

The next sample is still lighter. It is an Adelaide, and corresponds with Ohio XX fleece washed. This is a wool shrinking 55 per cent and yielding 45 per cent of clean scoured wool. Only the very best of the Adelaide wools shrink as low as 55 per cent; some of them run up to 70 per cent. This is skirted wool. The American wool of the same kind and quality is not skirted and from this cause sells in the grease at a lower price. These American and foreign wools of the same grade practically enter into the same cloth. When a manufacturer imports enough of this class of Adelaide (55 per cent shrinkage) to make a pound of cloth he pays the Government 39.10 cents duty on 3 pounds  $8\frac{7}{8}$  ounces which is the amount it takes to make a pound of cloth. He saves the small fraction of 4.90 cents out of the compensatory duty. This shows the inducement to import skirted light shrink wools. (See table on page 1523.)

This sample [indicating] is Port Phillip greasy superior, which is the most valuable wool in the world. It also corresponds with the XX Ohio although it is cleaner. Three pounds three and one-half ounces of this high class of Port Phillip skirted fine wool will make a pound of cloth. It is very clean. It is on account of its light shrinkage that it takes such a small quantity, as each pound yields 50 per cent of clean scoured wool. If a manufacturer wants to import only enough wool to make 1 pound of cloth he would import 3 pounds  $3\frac{1}{2}$  ounces and would pay the Government in duty 35.20 cents on the wool and thus save the small fraction of 8.80 cents out of the compensatory duty on a pound of finished cloth. This class of wool is limited. The treasurer of the Washington Mills in an open letter states that only 5 per cent of the product of Australia is as clean as that. His estimate is entirely too small, but whatever may be the quantity, there never was any difficulty in procuring an ample supply of it, and our manufacturers have never been compelled, even with free wool, to resort to the faulty wools that require more than 4 pounds of wool to make 1 pound of finished cloth, and I contend that they never will be required to, nor will they, in my opinion, desire to do so.

This last sample is the lightest wool that comes from Australia. The shrinkage is 45 per cent, and it yields 55 per cent of clean, scoured wool. While there is a limited amount of this wool, there never was too little for America. It takes only 2 pounds  $14\frac{1}{2}$  ounces of this kind to make a pound of finished cloth. The duty on this 2 pounds  $14\frac{1}{2}$  ounces would be only 32 cents, while the compensatory McKinley duty was 44 cents per pound on cloth, so that if all manufacturers could use this kind they would save 12 cents out of the compensatory duty on each pound of cloth made of such wool. (See table on page 1523.)

The McKinley Schedule K, which imposed a duty of 11 cents per pound upon wool, determined the compensatory duty of 44 cents per pound on the cloth by taking shrinky wools yielding 40 per cent of scoured as the dividing line. The great bulk of the world's supply of wool (I suppose fully 75 per cent of it) is so shrinky that a compensatory duty of 44 cents per pound would involve a manufacturer in a loss by its use. But there is an ample supply of such as shrinks less than 60 per cent. The lighter the shrinkage, you will observe, the greater is the amount of the compensatory duty which the manufacturer saves. It was not foreseen by the joint convention of woolgrowers and woollen manufacturers that formed Schedule K of the McKinley law that the manufacturer was to get any fraction of the compensatory duty, but the working of it for four years developed this fact, and its operation completely justified its inventors.

After the compensatory duty was removed and nothing was left but the 50 per cent ad valorem duty (which, through undervaluations and false invoices, is not all collected), the manufacturer began to be compelled to close his mills. It was found that a nominal ad valorem rate of duty of 50 per cent to cover a difference of over 100 per cent in wages between here and abroad would not do. By limiting his purchases to light shrinking wools the manufacturer could, under the McKinley law, save, as already explained, a small fraction of the compensatory duty, and if that had not been the case his mills would have been closed under the McKinley law, as they are closed to-day with the inadequate Wilson low rates.

The CHAIRMAN. Is there not another important fact, that the McKinley law made the duties part specific and part ad valorem, so that the ad valorem was the subordinate part of the duty? Under the act of

1894 the duty is exclusively ad valorem, and therefore our whole attention may be directed to undervaluation; and is it not true that there has been an incentive to undervaluation which has resulted, in practice, in there being a smaller proportion of the duty collected than there was under the other law?

Mr. JUSTICE. Yes, sir; that is a correct statement of the facts.

The CHAIRMAN. And is not that a fact that you have to take into consideration?

Mr. JUSTICE. Yes; it is a very grave matter, involving the opening or closing of our mills, upon which we depend for a market for domestic wool.

I will quote in this connection from a pamphlet which I shall hand in, marked Appendix A, to which I now allude, and which bears directly and forcibly on that point. It is entitled "Prophecy and Experience," and is from the September number of the bulletin of the National Association of Woolen Manufacturers. It is a most comprehensive and clear statement of this part of the subject, and as well a most earnest plea for the woolgrower from the standpoint of the manufacturer, as well as for the factory operative, and for the man who employs him. For conciseness and clearness I have seen nothing like it, and for this reason I desire to have it included in my argument. On page 14 of Exhibit A you will find that the average importation of cloth under the first three years of the McKinley law was about 13,000,000 pounds or a total of 41,700,000 for the whole period. The average value of these importations was about \$12,300,000 per year, or a total of \$37,019,000. Comparing the year 1895 with the whole period of the McKinley law, or rather the years 1891, 1892, and 1893 (for everyone admits that the law was a dead letter after March 1, 1893, and that the Wilson law was discounted after that date, and what happened between March 1 of that year and the time when the Wilson law went into effect is of no value for a basis for estimating its utility), we find that the importations amounted to over 40,000,000 pounds, with a custom-house value of about \$25,000,000, which was an increase of 200 per cent in pounds over the annual average of the first three years of the McKinley law, but the value is only doubled or increased 100 per cent.

The CHAIRMAN. And wools had not fallen abroad?

Mr. JUSTICE. No, sir. On the other hand, they had advanced in price abroad. As already shown Port Phillip fine advanced in London 5 cents per pound between the first and the last of the year 1895, when the effects of the opening of our markets was fully felt abroad, as you will see by tables appended.

[Justice, Bateman & Co., circular, August 1, 1896.]

#### THE EFFECTS OF FREE WOOL.

In Table A is a schedule of twelve leading grades of American wool, with the prices in the markets of Philadelphia, Boston, and New York, on August 1, 1892, during the second year of the McKinley law, when that law was in full and undisturbed operation. In the next column are the prices in the same markets at this date, the second year of the Wilson-Gorman law. In the third column is the number of cents per pound decline caused by the removal of the McKinley duties. The average decline by the substitution of free trade for McKinley protection on wool has already been 42½ per cent, and prices are still falling. The average price of wool in London, for wool of the same kind and quality, from 1868 to 1894, was 51 per cent lower than in the protected markets of the United States during that time. This difference has now been overcome by the domestic decline and the foreign

advance. The removal of protection, which caused American prices to fall, stimulated the London wool market, and the latter has been advancing during the period that American markets have been declining. The London prices for foreign wool of the same kind and quality as the domestic are shown in Table B. If it was not the removal of the McKinley duties which caused this decline in American wools when the markets of the world were advancing, what was it?

TABLE A.—*American wool, Philadelphia and Boston prices.*

Average London advance in two years, 9 per cent.

The CHAIRMAN. Is not that fact a demonstration that under exclusively the ad valorem system there have been enormous undervaluations, to an extent unknown before?

Mr. JUSTICE. This fact alone would indicate an undervaluation of about 33½ per cent, because here is evidence that the quantity has increased three times, or thribbled, and the values have only doubled. That will be found on page 14 of Exhibit A, which I submit, and to which I again call your attention as most important, as showing where the Government is losing its revenue.

There is just one more point about which I wish to speak, and then I will close, thanking the committee for its indulgence, and apologizing to it for having taken up so much more time than was originally assigned to me for the discussion of this subject. However, this is an important matter, and if it were printed only without any oral explanation, a good deal of its force would be lost.

In making a new tariff law there seems to be a general impression among the public that you must make a conservative bill, which means low taxation, but they lose sight of the fact that the increase in the national debt under President Cleveland's Administration will

require higher taxation per capita than was necessary under the McKinley period. By the time the new revenue law goes into operation the increase in the national debt threatens to approach \$600,000,000. I arrive at these figures in this way: There were \$260,000,000 of bonds sold. The interest on those bonds up to the time they mature will be over \$240,000,000. This interest has to be paid out of taxes before the bonds are paid, which makes over \$500,000,000 increase in the national debt without adding the deficit. Now, at the rate of the increasing deficit which is going on (you know better than I how much a month) that deficit will bring the total debt up to near \$600,000,000 by the time the new law can be framed and passed. The people will therefore have to submit to a higher per capita taxation than under the McKinley law, whether they like it or not. That is the price they pay for the experiment of a tariff for revenue only, and that kind of policy.

Mr. GROSVENOR. If they have a luxury they must pay for it.

Mr. McMILLIN. You do not take into account that between \$100,000,000 and \$200,000,000 of the proceeds of the bonds are on hand now to be used in any way the Government sees proper.

Mr. JUSTICE. I append herewith my suggestion of the proper sort of a tariff law. It provides at the start for 2 cents per pound less duty on wool of the first class, and 8 cents per pound less duty on cloth than was imposed by the McKinley law. As the foreign wool supply is rapidly increasing foreign prices must fall. They will undoubtedly go lower than ever before soon after a duty is imposed, when our demand ceases, for in order to avoid the duties our importers and foreign consignors will have shipped in the better part of a two years' supply in advance of the new law. As wool advanced 5 cents per pound in six months after our duties fell and we began to buy freely of them, it will decline at least this much when we cease for a period to buy. Before we again begin to import the price, in my judgment, will be more than 5 cents lower than it is to-day, so that more than half of the 9 cents duty provided will then be lost in the increase in the domestic price. The increase in the price of wool to the domestic grower will then be only 4 cents above its present value. When this occurs he will be disappointed, and will not be satisfied to permit the new law to be permanent. There must therefore be provided an annual increase of 1 cent per pound for each fiscal year ending June 30 for four years to come, as is indicated in the wool bill which I herewith suggest. This plan makes the cost to the consumer, landed in New York of imported wool and imported cloth with duty paid, less than the average cost of the same articles for the ten years ending with the McKinley law in 1894, when the duty on wool was 11 cents per pound and the duty on cloth 44 cents per pound.

The following table, based on the proposed graduated duty and also based on the average London price for ten years ending with 1894, with the probable price at the end of each subsequent fiscal year, will show that the cost to the American consumer at the end of the fiscal year 1898 on imported wool, in comparison with the McKinley period, will be 2 cents per pound less on wool and 8 cents per pound less on cloth; in 1899 it will be 3 cents per pound less than the McKinley period on wool and 12 cents per pound less on cloth; and at the end of the fiscal year 1900 it will be 4 cents per pound less than the McKinley period on wool and 16 cents per pound less on cloth; and at the end of the fiscal year 1901, when the duty will continue without change, the cost to the consumer will be 5 cents per pound less than in the McKinley period on wool and 20 cents per pound less on cloth.

| McKinley duty. | Proposed graduated duty, ending June 30 of each year until 1900 and continuing thereafter without change. | Average price of choice Port Phillip wool in London during the ten years ending 1894 was 21.70 cents, or practically 22 cents. | Estimated price of choice Port Phillip wool in London at the close of each fiscal year. | Cost of choice Port Phillip wool to consumers, landed in New York, exclusive of freight and charges. | Lower to consumers on each pound of wool than McKinley law; wool duty of 11 cents per pound. | Lower to consumers on each pound of cloth than McKinley law; compensatory duty of 44 cents per pound. |
|----------------|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 11 cents.....  | .....                                                                                                     | 22 cents.....                                                                                                                  | .....                                                                                   | 33 cents.                                                                                            | Year ending June 30, 1898, 2 cents lower than McKinley law.                                  | Year ending June 30, 1898, 8 cents lower than McKinley law.                                           |
|                | Until June 30, 1898, 9 cents.                                                                             | .....                                                                                                                          | Year ending June 30, 1898, 22 cents.                                                    | Year ending June 30, 1898, 31 cents.                                                                 | Year ending June 30, 1899, 3 cents lower than McKinley law.                                  | Year ending June 30, 1899, 12 cents lower than McKinley law.                                          |
|                | Until June 30, 1899, 10 cents.                                                                            | .....                                                                                                                          | Year ending June 30, 1899, 20 cents.                                                    | Year ending June 30, 1899, 30 cents.                                                                 | Year ending June 30, 1900, 4 cents lower than McKinley law.                                  | Year ending June 30, 1900, 16 cents lower than McKinley law.                                          |
|                | Until June 30, 1900, 11 cents.                                                                            | .....                                                                                                                          | Year ending June 30, 1900, 18 cents.                                                    | Year ending June 30, 1900, 29 cents.                                                                 | Year ending June 30, 1901, 5 cents lower than McKinley law.                                  | Year ending June 30, 1901, 20 cents lower than McKinley law.                                          |
|                | After June 30, 1900, and thereafter without change, 12 cents.                                             | .....                                                                                                                          | Year ending June 30, 1901, 16 cents.                                                    | Year ending June 30, 1901, 28 cents.                                                                 |                                                                                              |                                                                                                       |

## SUGGESTED WOOL SCHEDULE.

All wools, hair of the camel, goat, alpaca, and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes:

Class one, that is to say, merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

Class two, that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel, goat, alpaca, and other like animals.

Class three, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for.

The standard samples of all wools which are now or may hereafter be deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

Whenever wools of class three shall have been improved by the admixture of Merino or English blood from their present character as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class one or as class two, as the case may be.

The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.

The duty upon wool of the sheep or hair of the camel, goat, alpaca, and other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt, or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

The duty upon all wools and hair of the first class shall be 9 cents per pound until June 30, 1898, then 10 cents per pound until June 30, 1899, then 11 cents per pound until June 30, 1900, and 12 cents per pound thereafter, and the duty upon all wools or hair of the second class shall be 12 cents per pound.

On wools of the third class and on camel's hair of the third class the value whereof shall be ten cents or less per pound, including charges, the duty shall be four cents per pound.

On wools of the third class and on camel's hair of the third class, the value whereof shall exceed ten cents per pound, including charges, the duty shall be eight cents per pound.

Wools on the skin shall pay the same rate as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

On noils, shoddy, top waste, slubbing waste, roving waste, ring waste, yarn waste, garnetted waste, and all other wastes composed wholly or in part of wool, the duty shall be thirty cents per pound.

On woolen rags, mungo, and flocks the duty shall be ten cents per pound.

Wools and hair of the camel, goat, alpaca, or other like animals, in the form of roping, roving, or tops, and all wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition not specially provided for in this act, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this act.

## APPENDIX A.

### PROPHECY AND EXPERIENCE—THE WOOL TARIFF OF 1894.

[Reprinted from the Bulletin of the National Association of Wool Manufacturers, September, 1896.]

#### I.

Pass this bill, and thousands of feet heretofore bare, and thousands of limbs heretofore naked or covered with rags, will be clothed in suitable garments; and the condition of all the people will be improved. It will give employment to 50,000 more operatives in woolen mills; it will increase the demand for wool, and prices will increase; and with increased demand for labor, wages will increase. Those who favor its passage may be assured that they have done something to promote the general weal, something

"To scatter plenty o'er a smiling land."

*Speech of Hon. William M. Springer, April 4, 1892.*

Speaking for myself, it is immaterial, in my judgment, whether the sheep grower receives any benefit from the tariff or not. Whether he does or does not, I am for free wool—in order that our woolen manufacturers, unburdened by a tax upon foreign wool and unburdened by a like tax upon home-grown wool, may manufacture for a wider market.—*Speech of Hon. William J. Bryan, January 13, 1894.*

It is well, as we approach the close of two years' experience with free wool, to examine the results of that experiment. The two extracts above will serve as a text; they fairly sample the promise and the prophecy which ushered in the new economic era. No change was ever made in the fiscal policy of a great nation from which the people were led to expect so much. It was to be the panacea for all industrial ills, real and imaginary. If the farmer incidentally suffered from it—as Mr. Bryan, with a candor lacking in most of his colleagues, intimated he might—the loss was to be made good by the wider market of the manufacturer. It is not necessary to question the good faith that lay behind all this promise and prophecy; recrimination

adds nothing to the force of accomplished facts, whose cold and cruel test imparts a grimly humorous turn to Mr. Springer's exuberant language. It is enough to record the fact that it was all a terrible and costly mistake—how costly, it becomes a public duty to attempt to measure, by the aid of such data as is accessible.

When the Hon. William L. Wilson found himself compelled to accept the Senate substitute for his tariff bill, he hid his chagrin and discomfiture under the declaration that free wool was gain enough, in that emasculated measure, to compensate for the loss of all the other reforms which the Senate had so ruthlessly negatived. Free wool was his corner stone for all fiscal reform; to have saved that from the general shipwreck was to have achieved enough to reconcile this discredited leader to the tariff bill of "perfidy and dishonor."

Free wool has had full swing for two years; and it is not to be denied that it has cut a wide swath in the industrial realignment of the United States—wider and deeper than Mr. Wilson dreamed would be possible. In his scholastic researches he had convinced himself, for we never doubted his intellectual integrity, that free wool would prove a great and immediate boon to farmer, manufacturer, operative, and consumer. On that proposition Mr. Wilson staked his reputation as an economist and a statesman, in language no less emphatic, if less exuberant, than that of Mr. Springer.

The advent of his political party to power in 1892 had found the wool manufacture in a condition of prosperity under the McKinley tariff of 1890, such as had never but once before befallen it—during the civil war, when high prices and exceptional demands made large profits and quick fortunes. All the machinery in the country was busy and new mills were building everywhere. The increasing competition precluded large profits, but the demand was steady, sales were easy, and the manufacturers found no fault. The people certainly had no occasion to do so, for they were getting their woollens cheaper than ever before, in greater variety, and of steadily improving quality. For the repeal of the legislation under which all this was possible there existed no excuse beyond the fact that a political party had come into the control of the Government which had resisted its enactment and was pledged to its repeal without regard to consequences.

What some of the consequences have been we shall endeavor to set down. It may be urged that they can not be fairly measured by any comparison of the state of the industry as it exists to-day, with its condition when Mr. Wilson and his associates found it at their mercy; that contributory causes have been potent in destroying confidence and markets; that other industries, at which the tariff of 1894 struck less vindictively, have suffered and are suffering. But the two industries which tariff reform picked out for its great object lesson have experienced a prostration without parallel in other lines. Indeed, the careful student of the history of the last four years, tracing this industrial ruin from cause to cause, will always find himself confronted, in the end, with the one great originating cause—the political revolution of 1892—which gave the control of the Government, in all its branches, for the first time since the war, to a party, the first article of whose creed was relentless hostility to the economic and industrial legislation upon which the nation had been nurtured and to which all its industrial and commercial mechanism was adjusted. Every business man knew that the literal carrying out of the Democratic platform, which pronounced all protection a fraud, would necessitate a readjustment of values in every line of business, the influence of which no one could tell, and the like of which had never in any age been experienced by any nation. It was an impending business cataclysm of tremendous import—enough, in and of itself, to explain and account for every ill which has since overtaken the country. But for the penetration of this poison of doubt and distrust through every tissue of the business fabric, none of these contributory causes would have been sufficient to produce more than momentary harm—all of them were bred in the womb of that one original cause. As modern commerce and industry are organized no nation can make the leap from a highly protective basis to a free trade basis without suffering a convulsion which years will be needed to repair.

As it turned out, the leap fell short of its avowed destination, and the industrial readjustment was less than had been anticipated. But in the meanwhile the mischief had been done. Distrust had taken root, confidence was destroyed, and the ground made fallow for all that has since transpired.

## II.

Following Mr. Wilson class by class, we begin with the farmer, whose injury, while not more direct and obvious, is more easily measured. The devotees of Mr. Wilson's school of political economy have been engaged for thirty years in an earnest and plausible argument to convince the farmer that free wool, so far from injuring him, would redound to his benefit in many ways. So lately as the last session of Congress Senator Mills, of Texas, announced in the dogmatic way peculiar to him, that "the protective tariff has never added one solitary cent to the price of domestic

wool in the United States." Available for Mr. Mills's use when he made this statement was the evidence that the shrinkage in the value of sheep and wool since the election of 1892 had been greater than ever before overwhelmed any important industry in any age in any country in so brief a period of time. We do not mean that there have not been instances of greater and more sudden declines in the value of certain products. There were times in early English history when the fluctuations in the price of wheat caused by the imminence of famine exceeded anything of which we can now form an idea, grain being sometimes four and five times as high in June and July as in September and October, when the crops were harvested and the scarcity relieved. These were abnormal fluctuations of temporary duration, which promptly readjusted themselves. The decline in the value of sheep and wool in the United States has been of a character *sui generis*, distinct and distinguished from any decline which may have been simultaneously progressing in other commodities, or in these particular commodities anywhere else in the world.

Under the act of 1890 the flocks of the United States had reached a total of 47,223,000, and were increasing at the rate of 1,000,000 a year. With a value of \$2.50 per head in 1892 our flocks were worth \$118,057,500. They have been decreasing at the rate of 3,000,000 annually under free wool; and their number had receded on April 1, 1896, to 36,464,405, with an average value of \$1.70 a head. The loss in number is more than 10,000,000 sheep in three years, and in value over \$60,000,000.

We are using the statistics of the Department of Agriculture, and they are the only figures available for these comparisons. There is a widespread impression that the statisticians of the Department have so managed their figures that the full dimensions of the injury done the sheep industry are not revealed in them. In several States the returns of the assessors indicate losses in sheep much greater than the Department shows. Many districts are found where the slaughter has been wholesale. Mr. W. B. Snow, formerly the assistant statistician of the Department of Agriculture, a man thoroughly cognizant of the methods of obtaining these figures, has recently completed an independent investigation which reduces the total number of sheep now in the country to 32,000,000, more than 4,000,000 below the Government figures, and indicating a loss in the last three years of fifteen and a quarter millions of sheep. It is our opinion that Mr. Snow's estimate is closer to the fact than that of the Department; but it is not necessary to impeach the official figures in order to make out a case against the legislation which is destroying the results of thirty years of protection in this industry.

Under the McKinley Act the wool clip was steadily increasing with the increase of flocks, and had reached in 1893 a total of 348,500,000 pounds, the largest clip ever grown in the United States, nearly double the largest clip ever grown in Great Britain, even when that country grew all the combing wools for the world's use; as large as the wool clip of Argentina as late as 1888; as large as the clip of Australia as late as 1885; equal to one-third of the available wool supply of all manufacturing nations as late as 1860.

At an average value of 15 cents a pound on the farm, the wool clip of 1893 was worth to the farmers of the country \$52,200,000. The entire value of all the Australian and colonial wool imported into London in 1870 was only £11,600,000, or about the same as the farm value of our domestic clip of 1893.

We make these comparisons because an impression prevails that the domestic wool clip at the best is of no great moment as an element of national wealth.

The clip of the present year, according to the annual estimates of the National Association, will not exceed 270,000,000 pounds, and the average farm value will not exceed 8 cents a pound, reducing the total value to \$20,800,000, a loss of 60 per cent.

In the bulletin of this association appear the monthly quotations of the prices of sixty different varieties and growths of domestic wools in the Boston markets. Taking these quotations by groups, as they are there arranged, and comparing the prices in April, 1890, with the prices in April, 1896, we have the following results, by groups:

| Varieties.                                                                                                                                  | Average price. |                | Per cent of decline. |
|---------------------------------------------------------------------------------------------------------------------------------------------|----------------|----------------|----------------------|
|                                                                                                                                             | April, 1890.   | April, 1896.   |                      |
| Ohio, Pennsylvania, West Virginia, Michigan, New York, New England, Kentucky, Indiana, and Missouri, 24 varieties, washed and unwashed..... | Cents.<br>30.3 | Cents.<br>17.4 | 42.3                 |
| Texas, California, Oregon, Montana, Wyoming, Utah, Colorado, New Mexico, Georgia, and Southern, 26 varieties, scoured.....                  | 49.1           | 27.4           | 44.2                 |
| Pulled wools, 10 varieties, scoured.....                                                                                                    | 45.9           | 28.5           | 38                   |
| Total, 60 varieties.....                                                                                                                    | 40.9           | 23.5           | 42.4                 |

The average decline in the whole group is 42 per cent.

No other commodity, raw or manufactured, has suffered a decline in value which approximates this. Its extent and significance may be shown in the specific case of Ohio XX wool. It has dropped in value, in the face of equal competition, from 29 cents in 1892 to 18½ cents per pound in 1896. The 1892 price on the scoured basis was about 28 cents above the value per scoured pound of the London price of the corresponding grade of Australian wool, while the 1896 price is about 4½ cents below the London scoured price of the like grade of Australian wool. This drop of 42 per cent in value represents the loss to the farmer from the repeal of the duty fixed by the McKinley Act. It is not in any sense due to a general decline in the world's wool markets; for a comparison of the London prices of various grades of wool, at the same dates, shows an average advance of about 9 per cent in 1896 as compared with 1892.

The pretense that the woolgrower got no benefit from the tariff on wool has thus been exploded for all time to come. With the obliteration of the theory has come the practical demonstration of the fact that the growing of wool can not be carried on as a profitable industry in this country without some measure of protection. Cheap as is domestic wool to-day, it is not as cheap, when all the conditions of shrinkage are taken into account, as many of the foreign wools which are now everywhere to be found in our markets. As the pressure of these foreign wools increases the prices of domestic wools are destined to fall still lower in comparison with foreign prices. This is proved by the fact that they can not now be profitably shipped abroad for sale in competition with foreign wools. The experiment has been tried a number of times during the present year and each time it has proved a failure. Some sale abroad may in time be found, but not at prices that will pay the farmer to export.

Thus it is evident that there is but one customer available for the domestic woolgrower and that is the American manufacturer. But free wool will deprive him of that single customer. Indeed, this has already occurred in large measure, as is shown by the statistics of wool imports since the removal of the duty. In the first twelve months of free imports 120,000,000 pounds of clothing wools entered our ports, an increase of over 300 per cent as compared with the largest imports under duty; and the aggregate imports of all classes reached 250,000,000 pounds, as compared with 175,000,000 pounds in the largest year under dutiable wool. This total came within 20,000,000 pounds of the total production of domestic wool in 1896. If we add to it the rags, noils, wastes, shoddy, and other wool substitutes imported during the same period we shall have a total about equal to the present year's clip. Very few years of increasing imports and diminishing clip will suffice to place the aggregate imports far above the domestic production. This enormous volume of foreign wool reached this country in a year when the consumption of American manufacturers was below normal quantity, and its presence here, much of it still unconsumed, explains the fact that there has been almost no market for American wools at any price.

The development of woolgrowing in the countries of the Southern Hemisphere has been enormous. The opening up of new countries in the East by improved transportation facilities has superimposed upon this increasing production millions of pounds of raw material not formerly available. The foreign wool markets were choked and sagging at the moment when the passage of the Wilson tariff act opened up a new outlet for their surplus. The increased shipments to the United States represent just about the measure of the surplus that pressed upon the European markets at the time. Necessarily, therefore, they worked a rise in prices abroad, while they brought the decline in the value of domestic wools. The foreign markets have been buoyant, while ours were lifeless. The woolgrowers of Australia, Argentina, and the Cape have received some portion of that which has been taken from American prices. This gain to them, at the expense of our farmers, will continue as long as wool remains free. It was foretold by manufacturers in every hearing that took place before Congressional committees when the wool duty was under discussion. But in justice to them it should be said that they were unable to foresee the full extent of the discrimination against our own woolgrowers which has followed the repeal of the wool duty. They looked to see an equalization of prices about equally distributed between foreign and domestic wool; they did not anticipate that domestic wool would lose it all; for they did not foresee that the time selected for this economic experiment would be the most inopportune, so far as the interests of our farmers were concerned, that could possibly have been chosen.

The experiment has proven a practical demonstration that the United States must stop growing her own wool, except as a by-product, unless there is a reasonable duty placed upon the wool of countries which can grow it cheaper because they grow it under conditions of a cheaper civilization. To learn this fact has cost our farmers an annual sum of money greater than the value of the property destroyed in the Boston fire of 1872. The conflagration was a visitation of God; the act of legislation, when we take into consideration the time it was done, the abrupt manner in which it was done, without provision for a gradual removal of the duty, and the

false economic premises by which it was sought to be justified, seems like an act of confiscation as we look back upon it.

Some compensation for this sacrifice there may be, if it shall appear that the American people have fully sensed the significance of the facts here stated. The lesson is, that it is cheaper for the country as a whole, and in the broad view, to maintain this industry by a reasonable tax, than to abandon it to others.

No amount of protection can restore the prices for wool that existed in the 70's and 80's, and no intelligent farmer needs to be told the reason why. If he has read the newspapers and the market reports, he knows that the world's production of wool has doubled since 1870, and that the demand for it has been steadily lagging behind this enormous increase in supply. He knows that the free coinage of silver, or any other nostrum for low prices, can never overcome the operation of the law of supply and demand. But a duty on wool will enable him to contend with these conditions and the American people are willing to restore to him that opportunity.

### III.

The traditional attitude of the manufacturer on the question of the wool duty has been the cause of mingled annoyance and astonishment to the doctrinaires of a revenue tariff. Mr. Cleveland, Mr. Mills, Mr. Springer, Mr. Wilson, Mr. Bryan, each in turn, has been insisting that the wool manufacturers were stone blind to their own interests because they have not welcomed the proffered boon of free wool. Instinctively the manufacturers have distrusted these Greeks bearing gifts. Two years' experience has taught them that instinct and reason were at one with each other. It has taught them that they were wiser than they knew in steadily resisting, through all these years, the tempting proffer of free raw material at the expense of the farmer, with the expectation of retaining the protection necessary to preserve the domestic market for their own productions. These two years, in which they have had unrestrained and unfettered access to the wools of the world, have been the most disastrous in the history of the American wool manufacture, not excepting the collapse that followed the close of the war of 1812, or the panic of 1837, or the panic of 1857. These three occasions have heretofore stood in men's minds for the worst that could happen to this particular industry, in consequence of commercial panic or change in economic law. Neither of them furnishes a standard by which to measure the extent of the present disaster, because at neither period had the wool manufacture reached the relative importance among our national industries it has acquired under thirty years of thoroughgoing protection.

The disturbance in the industry began far in advance of the actual enactment of the tariff of 1894. The anticipation of the free listing of wool operated to create a shrinkage in the values of all goods and stocks on hand, which brought them down to the free-wool basis long before the manufacturer could turn about, readjust his business, and make a new start. He received its blow between the eyes before the Wilson bill had even been drafted. It became necessary in every mill in the country to charge off a lump sum—greater or less, according to the amount of goods and stock on hand—a direct loss due to legislation that was only impending, which strained the resources of the most solvent concerns. Such a loss could have been accepted philosophically, as the hazard of business, had it been the end of the matter, and had it left the manufacturers with feet planted upon solid ground. But it was only the beginning of an experience which was to test their nerve and endurance at every step. They found themselves walking in a quagmire, into which they sank the deeper as they advanced.

At no time since the act of 1894 has it been possible to manufacture woolen goods with the certainty that they would be worth, when they found a market, what it cost to make them. It may be answered that this is a condition incident to the times and not attributable to the tariff revision, except as the times themselves are attributable to it. The answer is not tenable, for the lack of a stable basis for their business was due to a cause which would have operated precisely the same under any business conditions. It is the logical sequence of the form of tariff that was applied to woolen goods in consequence of the abolition of the wool duty.

Woolens differ from nearly every other kind of merchandise imported in that it is impossible to definitely determine the true valuations of fabrics which are innumerable in their variations. Not even experts can be sure of the cost of the goods a neighbor is making, so infinite is the possible variety of material, of fabrication, of combination. Hence it has always been a cardinal principle of the protective policy that a part at least of the duty levied upon woolen goods must be specific in form, because the specific duty is fixed, definite, and can not be evaded. The offset to the specific wool duty has offered a method at once scientific, exact, and convenient for this specific duty on woolens; and the ad valorem duty with which it has been associated has allowed sufficient play in the adjustment between duty and value to make

the compound duty equitable and just. The tariff of 1894, when it wiped out the wool duty, tore down the compound woolen schedule and left the domestic manufacturer exposed to fluctuations in duties, and thus in the duty-paid values of imported cloths, as innumerable as the varieties of those cloths.

Thus that tariff effected a double revolution in the basis upon which the American wool manufacture has been built up. It not only transferred the industry from a condition of dutiable materials to free materials, but shifted it at the same time from a tariff of compound duties, in which the specific form predominated, to a tariff wholly ad valorem. Either change was enough to stagger any industry, however well fortified; the two together were sufficient to render inevitable precisely that which has happened.

As the Greeks entered Troy through the stratagem of the wooden horse, so the free traders undermined the wool manufacture with their fatal gift of free wool. "We give you free raw materials with our blessing," they said; "but you must take with it a new form of protection for yourselves—a protection which is not protection, because under it you will never know what kind of competition you must meet or where it is going to strike you." The wool manufacturers thus found themselves very much in the position of an army marching to battle in the pitch dark, with only the vaguest idea where the enemy lay intrenched. After the battle was on, they found themselves surrounded by ambuscades on every hand. When driven from one position they shifted to another. They have not surrendered yet, but they have retired from the contest awaiting developments. Buxton, Ronald & Co., the London wool dealers, pay them a handsome tribute in their last annual circular. "The American manufacturers," says this English authority, "made a gallant but not altogether effectual stand in order to retain the command of their own markets." The compliment was generous, from one who looked upon the battle as already won by the foreign manufacturer.

There are certain signposts, otherwise known as the official statistics of imports furnished by the United States Treasury Department, by which we can partially trace the progress of this industrial battle. The woolen schedule did not go into effect until January 1, 1895, four months after the rest of the tariff bill became operative. In the very first month the true significance of the abandonment of specific duties began to appear. There was no longer any clew to the values which domestic manufacturers must meet to hold their market. All the old standards were broken down. The volume of the imports soon became appalling. They averaged \$5,000,000 a month in value, so that at the end of the first twelve months under the new law—that is, from January to January—the total value of woolens imported had passed the mark of \$60,000,000, foreign value. It was like the breaking loose of the Johnstown reservoir—it swept everything before it.

The imports of that first year represent a duty paid or domestic value of \$90,000,000, equivalent to about one-third of all the woolen goods made in the United States in 1890, as shown by the Federal census of that year. The total value of wool manufactures returned by that census, after deducting the duplications in the form of yarns, etc., and the cotton knit goods included in the enumeration, was about \$250,000,000. The output of American mills was reduced in a larger percentage in 1895 than the imports were increased; to such a degree, in fact, that it is safe to say that nearly one-half of all the woolens which entered into consumption in that year were of foreign manufacture. We have in this country enough woolen machinery to manufacture all the woolen goods our people can consume. But we have no use for it under the present tariff.

There have been one or two years in which the value of imported woolens approximated the value assigned by the Treasury Department to the woolen imports of the calendar year 1895. For example, in 1890, during the pendency of the McKinley bill, the imports of woolens reached \$56,582,432 in foreign value. But our own mills were busier in that year than they ever were before, and the value of the imports, as compared with the domestic production, was relatively small. Beyond that, the fall in values since 1890 has been so great that the quantity of goods represented by the value of the imports of 1895 is at least 30 per cent greater than the quantity represented by the value of the imports of 1890.

The real significance of these imports does not therefore appear in the value; we must look to the quantities to measure their influence upon domestic industry. Taking cloths for an example, the following table shows (besides the total imports of woolens) the quantities and values of cloths imported for the calendar years ending December 31, 1891, 1892, and 1893 (three years, during two of which the McKinley tariff was in operation under normal business conditions), and also for the calendar year 1895.

*Imports of manufactures of wool and cloths.*

[From the Commerce and Navigation Reports, United States Treasury Department.]

| Year ending December 31—     | Wool manu-<br>factures. | Cloths.      |                |
|------------------------------|-------------------------|--------------|----------------|
|                              |                         | Pounds.      | Value.         |
| 1891 .....                   | \$34, 010, 543          | 11, 886, 716 | \$11, 489, 972 |
| 1892 .....                   | 37, 515, 445            | 16, 248, 313 | 14, 068, 525   |
| 1893 .....                   | 30, 238, 506            | 13, 604, 965 | 11, 460, 795   |
| Average of three years ..... | 101, 764, 494           | 41, 739, 966 | 37, 019, 292   |
| 1895 .....                   | 33, 921, 498            | 13, 913, 331 | 12, 339, 764   |
|                              | 60, 319, 301            | 40, 070, 148 | 25, 281, 668   |

The computations above made show that the quantity of cloths imported in 1895 was almost equal, in pounds, to the total quantity imported in the three years 1891, 1892, and 1893, under the McKinley tariff. The cloth imports of the year 1892 were the largest in quantity of any one year in our history, up to that date—16,248,313 pounds—showing that the McKinley woolen tariff was not the prohibitory tariff its opponents represent. The imports for the year 1895 were, however, 40,070,143 pounds of cloths, an increase over the largest previous year of 147 per cent.

These figures convey some impression of the degree of injury inflicted upon our wool manufacturers in the first year of the Wilson tariff. The imports of cloths could not increase 147 per cent over the largest previous year, in the business conditions then prevailing, without curtailing the market for domestic goods in a corresponding degree; and that is exactly what happened. It was not all nor the worst that happened. With an increase of 147 per cent in quantity of cloths imported, as compared with the largest previous year, there was an increase of only 46 per cent in the value of those imports, as compared with the same year. All the time that the quantities of imports were going up the values were going down; or, if the actual values were not going down in all cases the character of the fabrics was shifting to lower qualities, so as to change the basis upon which the American must carry on competition. Foreign manufacturers are canny; they have a good many devices for capturing this market, which has been worth to them, since the Wilson bill took effect, more than all the "open markets" of the world. The measure of this shifting of values is partially indicated by the returns of the Treasury Department, which show that the average value per pound of the cloths imported fell from 90 cents in 1894 to 69 cents in 1895.

Thus the American manufacturer found himself ground between an upper and a nether millstone. To reach the full purport of this change in the unit of value, contrast these three years, 1891, 1892, and 1893, with 41,739,000 pounds of cloth imports, valued at \$37,019,000, with the one year 1895, when 40,070,000 pounds of imports were valued at only \$25,281,668.

These enormous importations, at these low valuations, crowded upon a sluggish market, were what broke down our domestic wool manufacture. How much of that decrease in valuation is represented by undervaluations, facilitated and encouraged by the ad valorem form of tariff, we can not undertake to say. Manufacturers have had experience enough to know, however, that the margin due to this cause alone can make all the difference between possible competition and no competition.

The statistics are not the only evidence, nor are they the most eloquent. For every woolen loom stopped in America a loom was started up abroad. No measure of legislation ever worked a more instantaneous change in the relative condition of an industry in the two countries where the wool manufacture has reached its greatest development.

The Bradford Observer described 1895 as the annus mirabilis in the history of that center of the English worsted industry. The Bradford exports to other countries were smaller than usual in that year; but to the United States they reached a total never before approximated; they rose to \$27,745,096, an increase of 21 per cent over the value of the exports thence of the largest previous year, 1889, when their value was \$22,835,591.

The Yorkshire manufacturers made hay while the sun shone, with very vivid impressions that the enactment of the Wilson tariff was the best stroke of good luck that had ever befallen them. There was but one drawback to their contentment; it arose from the fact that they could not get help enough to weave the goods as fast as their orders called for them. The Observer speaks of this phase of the situation as "a phenomenon." "Such a thing had not happened as that a loom should stand idle with a warp in it for want of somebody to attend to it;" and it describes the domestic infelicities which the Wilson tariff created in Yorkshire.

"Hundreds of households," it says, "have been stranded, because their maids-of-all-work have throw away the cap and print dress, to don the weaver's harden skirt." It probably never happened before that England found herself short-handed, while the United States was filled with people looking for work.

American manufacturers had begun work under the new tariff with a good deal of courage, for they realized that the short production of the previous year had cleaned the merchants' shelves throughout the country; it was a fair assumption that there would be fair field for both themselves and the foreigners. For a few months they ran their mills with a fair degree of regularity. As the season advanced they began to be reminded of the old saying that the mill never grinds with the water that is passed; the business lost in a bad season is never made up in the next. That short period of activity taught them that the new tariff had given the foreigner the power to determine what fabrics should sell, and at what prices; that there was reserved for home makers only the leavings, and these at prices fixed by other standards than productive costs.

The year witnessed constant readjustments of these costs, frequent experiments with new materials, and necessary modifications of fabrics. By the employment of cheaper grades of stock, and by rigid economics in every direction, costs were gradually reduced; but the great factor in the way of successful competition was the labor cost, and here the difficulties were insuperable. Wages in woolen mills are determined largely by the scales that prevail in other industries; they can not be reduced when general reductions are not progressing. Some readjustments had occurred in 1893; but it has been demonstrated that lower wages than the rates now existing are necessary, if the present wool tariff remains.

Manufacturers are averse to a contest over wages. In the present instance they preferred the other alternative; for there was no certainty that even with lower wages they could hold their own. Toward the end of the year 1895, therefore, production began to decrease, and before the heavy-weight season was over nearly one-half of the machinery employed upon men's wear was idle. In the transition from the heavy weight to the light weight season, the real condition of the American wool manufacture was for the first time apparent. Many mills shut down entirely; others ran alternate days, or half or two-thirds time; still others discharged the half or more of their employees; and with the advance of this summer about 80 per cent of the wool machinery of the country stood idle.

The excessive importations thrust into the country during the first year of the operation of the new schedule was the most obvious and potent of the several causes which brought this result about. The prices fixed upon these goods were tempting, and the importing trade overloaded itself beyond the capacity of the country to consume, even in normal business times. These excessive importations not only closed the American mills, but they so surfeited the market that importations have very largely fallen off during the first six months of 1896. Thus, for the month of June, 1895, the imports of woollens were \$3,901,967, while for the month of June, 1896, they were only \$2,286,007. Large as is the decline of imports indicated by these figures, it is not as large, relatively, as the decrease in the production of American woolen mills between the same dates. As matters stand to-day, the imports fairly balance the domestic production.

This is the situation of the wool manufacture as the second year of the new tariff draws to a close. Its potentialities for mischief have not, however, been fully developed. The struggle during these first years has naturally concentrated upon goods for men's wear. These are goods in which fashions are made abroad, and in which it was possible to hit the needs of the American market without the least delay. In some other lines time is needed to learn the peculiar requirements of our people. We have always made our own blankets, for instance, and the foreign manufacturer must learn to make something very similar in style before he can largely displace domestic makes. But in this group, as in all others, the certainty that he can undersell implies the certainty that he will undersell.

Mr. Bryan promised foreign markets as the fruits of free wool. They remain a myth of the imagination; but the loss of the domestic market is no myth.

#### IV.

It is not necessary to dwell at length upon the experience of the woolen mill operative under the tariff of 1894. His condition is always photographed in that of the manufacturer; if the latter prospers, employees prosper; if he can get no orders for his looms, his weavers are idle. Under the McKinley tariff wages in woolen mills reached the highest point, measured by their purchasing capacity, in the history of the country. More important than the comparative rates was the regularity with which they were earned and paid. Until the election of 1892, wages were not only high, but they were paid all the year round; so that average yearly earnings were increased even more than the average weekly earnings. Under that law

American manufacturers experienced the same difficulty that the Yorkshire manufacturers encountered after its repeal; it was a constant hunt for operatives to equip the machinery. There is enough of that machinery to give employment to 230,000 men and women, and their normal wage under the McKinley tariff aggregated \$80,000,000 annually. If we cut both figures in two in the middle, we shall have left an overestimate of the number who find employment to-day and a large overestimate of the aggregate of wages they are now receiving.

This sum of \$40,000,000 a year in wages unearned represents some portion of the loss in the purchasing power of the people when foreign mills make our clothing for us. Not even cheap money can be plentiful when the mills are closed.

## V.

Here the consumer appears on the scene, and as he is numerically the largest group in interest, Mr. Wilson's philosophy makes him the only party whose condition, as directly affected by the new wool schedule, is worthy of serious consideration.

It is impossible for grower, manufacturer, and operative to suffer the loss we have depicted without every member of the community indirectly sharing in that loss. The wool industry, hardest hit of any in the tariff revision of 1894, was the first to feel its effects, and it has been a business barometer whose fall has carried prostration into other industries. A sympathetic cord binds the whole commercial world in one sensitive whole. Everybody has suffered because this great national industry has been driven upon the breakers.

In balancing the account of the consumer we must find his gain exceedingly great to offset the losses he has been compelled to accept in order to obtain it.

The experience of the past year seems to have satisfied a good many people that Major McKinley was right when he said that cheapness was not the only desirable thing in a coat, or in anything else. The universal complaint is that everything is too cheap. In 1894 the complaint was that certain things were too dear, and that the tariff made them so. Mr. Bryan, when a Member of Congress, was particularly violent in his attacks upon the wool and woolen schedule, because it added to the cost of the poor man's clothing. He was wont to figure out in elaborate percentages, which were a striking evidence of his imaginative powers, just how many dollars were added to the cost of coat and blanket by the duty on the wool and the goods. It is a curious illustration of the rapid mutations of American politics that after a short two years Mr. Bryan turns up as the Presidential candidate of a political party whose rallying cry is that everything is now too cheap. It is to be presumed that Mr. Bryan concedes that if the farmer is entitled to a fair price for his corn, the manufacturer is entitled to a fair price for his cloth. Such a concession destroys the whole logic of his tariff speeches of 1894. The cheapening of woollens over which he became pathetic was the difference between manufacturing at a profit and manufacturing at a loss. This difference is not a very serious matter to the consumer—a few pennies per yard of the 15 or 20 yards he may require in a year—but to the maker of thousands of yards of that cloth it is the difference between earning a fair return on the capital invested and running the mill at a loss. The whole philosophy of the present situation is wrapped up in that simple illustration.

Under the McKinley law the prices of woolen goods instead of advancing had a constant tendency to decrease, as was shown by the investigation of prices made by the Senate Finance Committee. The home competition, encouraged by that law, operated as a regulator of prices, while the large sales, quick markets, and sure returns it insured made manufacturing fairly profitable, even at lower prices than formerly prevailed. The consumer was never able to place his finger upon a dollar which the passage of that law added to the cost of his clothing.

When we recall the passion, the expostulation, and the declamation wasted upon the wool duty through all these years, the few pennies by which the consumer can justly claim himself a gainer, in direct consequence of free wool and lower duties on goods, are suggestive of much ado about nothing. Those acres of declamation in the Congressional Record overlooked the large proportion of the cost of a suit of clothes which is embraced in the costs of distribution—those of the wholesale clothing manufacturer and the retailer of clothing. Analysis of costs shows that these expenses are greater than the cost of all the materials contained in the suit. When the reduction in the cost of the cloth, due to the removal of the wool duty (a duty amounting to perhaps 8 per cent of the retail price of the suit), comes to be distributed between the wholesaler and the retailer, the modicum of it left for the consumer grows so small that he may well wonder if it exists at all.

The wholesaler and the retailer do not give the consumer the benefit of any larger proportion of that sum than they find themselves compelled to do by the conditions of the market. If it becomes necessary to force the market by reducing prices, the consumer gains at the expense of wholesaler, or retailer, or both; he is gaining in that way now. If it were possible to reach the whole truth in the matter, it would

be found that the tariff revision of 1894 chiefly affected the present price of clothing, not by the reduction in duties it effected, but by creating the industrial disturbance which has forced all prices down, irrespective of tariff duties. Cheap clothing we have to-day in abundance. It is not cheap because the duty was taken off wool, but because of an inopportune and ill-considered tariff revision which threw the Government finances into confusion and the country into chronic panic. The consumer, in the sense that he represents the largest number, has been the largest sufferer.

This two years' experience has demonstrated one thing satisfactorily, that the domestic wool manufacturers were not making inordinate profits under the tariff acts which existed prior to 1894. When they came to meet the new prices forced upon them by the reduced duties upon imported goods, it at once appeared that a margin of a very few cents on a yard of cloth was the factor which determined whether they could continue to manufacture or not. A properly adjusted tariff was essential to the preservation of that margin; but it had not been potent to push the prices of domestic goods above that margin.

The consumer has learned another thing about woolen goods which it is worth his while to know. He has learned that a tariff on wool does not tend to increase the consumption of shoddy and other substitutes by the manufacturer; and that, on the other hand, a revenue reform tariff, such as we now have, does tend to enormously increase the adulteration of goods.

The McKinley tariff, and those which preceded it, by fixing the specific duties on woollens according to weight instead of value, operated to exclude from importation all goods made from adulterated or revamped materials. This feature of the woolen schedule has always been described as its chief monstrosity by those who regarded it as a conglomeration of monstrosities. They called it a discrimination against the poor man's goods. They held, furthermore, that the wool duty drove the American manufacturer to make wholesale use of shoddy, by the high price it compelled him to pay for honest raw materials. Two years of experience have destroyed forever this thirty-year-old theory.

It has come about in a very simple way. So long as our manufacturers did not have to compete with foreign shoddy-made goods the tendency was rather away from its increased use, for every man's goods found and held a market on their merits; those who used shoddy did it at their own risk, and their goods passed for just what they were. When the Wilson tariff removed the barrier against the importation of shoddy and shoddy goods the situation changed in the twinkling of an eye. More shoddy goods are made in England than in all the rest of the world put together. They have learned there, by long experience, the art of utilizing to the best advantage every kind of refuse that comes from rags and wastes—let it have but two ends, they will find a way to spin it. These were the goods, among other varieties, which began to pour into the United States when the bars were let down. These were the goods with which American mills had at once to compete. In order to compete it was necessary to use the same kind of materials they use at Batley and Dewsbury. Cheap as wool was, it was not cheap enough to compete with English and continental rags. Deterioration in quality has been the distinguishing result, both as to imported and domestic woollens, of the tariff of 1894.

In closing this record we recur to our text to emphasize the difference between foresight and hindsight. If Mr. Springer could have foreseen how completely experience would falsify his oratorical pyrotechnics, the tariff act of 1894 would never have been passed.

= Table showing the decline in six years of Ohio XX-Scoured and Port Philip Scoured. =

Ohio 2x  
Scoured  
12 1/2% decline  
at end of years

Port Philip  
Scoured  
12½% decline  
at end by 1880

\*✓ ARGENTINE. Increase of 65 per cent with the advantages of perennial pasture, requiring no winter feeding.  
 \*✓ GREAT BRITAIN. Decrease of 12½ per cent under the disadvantages of free trade and a climate somewhat similar to that of the United States, although more favorable than the latter.

REVIEW OF THE FOREIGN WOOL MARKET FOR 1892 BY HELMUTH,  
SCHWARTZE & CO.

[Extracts from the annual wool report of Messrs. Helmuth, Schwartz & Co., London, January 9, 1893.]

A REVIEW OF THE YEAR.

In the history of the fluctuations of value the past year establishes a record in two respects; it marks the lowest point to which Australian merino wool has fallen ever since it played a leading part in the supplies of the world, and what is more significant it is also the year of the lowest average level of values ever known for colonial wool. Twenty years ago wool was about double the value of what it is at present, but it is not necessary to go back so far for a comparison, which would indeed be misleading, as the general circumstances at that time were different. The contrast with quite recent years is sufficiently striking. In 1891 the average value of a bale of colonial wool was 13 per cent higher than last year; in 1890 the difference was 23 per cent, and in 1889 very nearly 30 per cent. The weight of these comparisons lies in the fact that they do not deal with temporary and isolated extremes of price fluctuations, but are broad yearly averages. Australian wool has on several occasions been for a short time nearly as low before—Cape and River Plate wool have even been lower—but there have never been such low yearly averages. And this not only applies to colonial, but to River Plate, to English, to low foreign; in fact, to almost every description of wool produced.

In looking for the causes of this depreciation we will pass by the fact that wool does not stand alone on a low level but that its fate is shared by the majority of large articles of consumption, for many of which the year 1892 also marks the lowest ebb in prices. That is a circumstance of which we will only say that it seems to stamp, not indeed the depression in its extreme, but a generally moderate range of value with a certain character of permanency. Of the more immediate causes of last year's

very favorable results, several, such as failures and a deficient harvest at home, cholera on the continent, and the tariff legislation and its present uncertainties in America, suggest themselves; but the truest and also plainest explanation lies probably in the fact that the production of wool is still in the ascendant, and that it forces the pace of the consumption at the cost of prices. In every transaction the bargain is with the buyer, and the seller in the abundance of supplies never has a real chance of permanently asserting himself. There is indeed machinery enough and to spare to deal with all supplies, for in the keenness of competition the tendency of the industry has been to expand in order to make up in a large turnover for smallness of profits. But this is only submitting an abundance of goods for an abundance of wool, and does not touch the ultimate demand which it seems can at present be stimulated only by lower prices. We have had then last year, an industry not supplied beyond its capacity and on the whole well employed, but securing at best, very moderate and in many cases inadequate results, because constantly working against a falling market. The expectation of a turn for the better, which the very low range of values naturally keeps alive, off and on leads to a small rise being mistaken for a serious movement, and the modern practice of buying from hand to mouth emphasises such a rise for a time, the absence of stocks compelling many to join who would otherwise wait. But the ground gained is almost invariably lost again. This has been characteristic of the market last year and indeed for some time; a low range of prices interrupted occasionally by spasmodic efforts at a rise, not resting on genuine demand, chiefly speculative and never outlasting in their integrity a series or even half a series of sales.

It need hardly be said how seriously the growers in the colonies are affected by the great depreciation of their produce and how difficult it must be for them to adjust their cost of production and management to these low values. But it is not easy to see what, in the present condition of trade, could bring about an improvement except one of the two things, either a great increase in the general spending power or a decided and unmistakable check to the growth of production. Of the former alternative there are at present few signs, but the latter is, we believe, in sight. There are indications that the expanding power of the great centers of production is reaching its limit. The home clips in Europe have long been stationary and the same may now be said of the production in the United States. The River Plate clip rather fluctuates than advances, the average production of the past five years being but 5 per cent higher than that of the five preceding years. At the Cape, too, little progress has been made since 1888. But in Australia the production, aided by a succession of good seasons, has risen in a striking manner, the increase in the number of sheep being no less than 50 per cent in the short space of six years; and it is here that a check seems to be impending. The colonies of Victoria and New South Wales are reported to be fully stocked; in many cases overstocked. It is the same in such parts of Queensland as are used for sheep growing, and though pastoral country in that colony is still unoccupied there is very small likelihood of its being taken up in the present state of prices. With the increase in Australia arrested, the production of wool generally becomes practically stationary, and as soon as that fact is realized some rise in the present exceptionally low value of wool can scarcely fail to follow.

#### PROSPECTS.

Despite the disappointing close of the December sales, we believe the prospects for the article to be good, basing our opinion mainly on the absence of a serious increase in this year's supplies. It is, of course, impossible at this early stage to speak positively on so deceptive a subject as the estimate of production has often proved. But if almost unanimous reports may be credited, there is not likely to be either in Australia or the Cape or the River Plate States any increase sufficiently notable to affect the market. The industry is without stocks and the level of prices with which the year starts is so low as to scarcely leave much margin for a further fall. A good deal of bad business has been cleared out in the course of the past twelve months, and the condition of trade, especially in this country, is healthier than it was at the beginning of 1892. It is not probable, according to the best accounts, that "free wool" will be introduced in the United States in the course of this year, though special and immediate legislation is not considered impossible. Were it to take place, the effect on wool would probably be considerable; but leaving this too-doubtful contingency out of sight altogether, the normal character of the general situation seems to us to preclude the likelihood of a further depression, and rather to point to a steady and eventually improving business.

**McKINLEY'S ELECTION CHECKED THE SLAUGHTER OF SHEEP—DECLINE IN WOOL IN TEXAS FROM 20½ CENTS IN 1891 TO LESS THAN 4 CENTS IN 1896.**

SEYMOUR, TEX., *December 1, 1896.*

DEAR SIRs: In reply to your many circulars and letters received of late would say all flock owners appreciate the interest you have manifested in their welfare, and in the election of William McKinley for President by the help of the literature you have put out. We know he is the rock upon which we have to build our hopes. At the distance at which we are apart you can not realize the condition to which we, who are engaged in sheep raising, have been brought in the past four years. In October, 1891, my clip was sold at 20½ cents per pound net, while my 1894 clip netted me about 5½ cents, my 1895 clip netted me 4½ cents, and 1896 less than 4 cents. I have the accounts of sales to substantiate what I say if anyone doubts it. The cost of raising sheep has increased instead of decreased, as we have to pay for all the range we use.<sup>1</sup> It costs me \$300 per year to range 2,000 sheep, \$35 per month for labor, about \$10 per month for board, a wagon and team, a camp outfit, salt, and many incidental expenses not enumerated, which make the cost to us nearly 50 cents a head to run our sheep, and besides we have wolves to kill the sheep.

This year's clip of this section of Texas was all shipped out by the 1st of July and has been sold in St. Louis at 6 cents, netting the growers less than 4 cents. There is no fall shearing done in this part of the State to amount to anything of late years. So far as I could learn all sheep owners had made up their minds to fatten and ship out their entire flocks if McKinley had not been elected, not breeding any at all, but with his election almost all are breeding their flocks, hoping to regain a part of what they lost during the past four years.

I remain, yours respectfully,

W. B. OGDEN.

JUSTICE, BATEMAN & CO.,  
*Philadelphia, Pa.*

**THE WORLD'S SUPPLY OF WOOL AND THE CONSUMPTION IN THE UNITED STATES.**

[Extract from Justice, Batemen & Co.'s circular of April 1, 1893.]

The world's supply of clothing wool (exclusive of carpet wool) is about 2,300,000,000 pounds, about one-seventh of which, say, 329,000,000 pounds, was raised in the United States in 1893.

[Justice, Bateman & Co.'s circular of February 1, 1894.]

The total supply of raw wool for the fiscal year ending June 30, 1893, was about 532,000,000 pounds in addition to the importation of about \$38,000,000 worth of imported cloth at the foreign value. It is estimated that the wool required to produce these goods was over three pounds of unwashed wool per dollar's worth of goods. This would therefore make a total consumption by the American people of nearly 650,000,000 pounds of raw wool, equal to about 27 per cent of the world's supply. As the American people are only 5 per cent of the world's population, and as they use 27 per cent of the world's production of wool, the per capita consumption is 9¾ pounds which is the largest by any nation in the world. It is therefore not surprising that foreigners are jubilant over the prospect of being able to secure a greater share of the United States market which advocates of the Wilson bill declare will be the result of its becoming a law, depriving the American producer of just so much of the American market as this bill proposes to give to the foreigner; for whatever additional employment is thus given to the foreigner, to that extent is the amount of work for our own people lessened.

[Justice, Bateman & Co.'s circular of June 15, 1895.]

In our circular of June 1, we published a table showing an increase in the world's wool supply from 1,126,000,000 pounds in 1880 to 2,700,000,000 pounds in 1895, an increase of 139 per cent. To offset this increase in the supply, it has been suggested that there might have been a similar increase in the wool-consuming population of the world. Mr. Thomas S. Beaumont, of Melbourne, Australia, furnishes an estimate of the increase in population and the increase in the world's production of clean scoured clothing wool (exclusive of carpet wool), noting an increase of 19.4 per cent

<sup>1</sup>In Australia range is taxed 1½ per cent only after its value has reached \$12,500. (See p. 76, Senate Mis. Doc. No. 35, Fifty-third Congress, second session.)

from 1884 in wool and an increase of 9.5 per cent for the same period in the population of wool-consuming countries, showing the increase in the world's supply of clothing wool to have been nearly 10 per cent greater than the increase in the population.

When asked as to the probable continuation of the rate of increase for the wool clip in Australasia, Mr. Beaumont, who is well equipped to give an opinion, states that the successful sinking of artesian wells has enabled the ranchman to secure a better supply of water, which is stored in reservoirs for the use of the stock. The stations having such improvements can sustain one-third more sheep than formerly, and in spite of the fact that many of the original owners, through the low price for wool, have become bankrupt, the banks and trust companies who have now become the owners of flocks and stations will continue the business, even at the present low prices for wool. The prospects are that without some great drought or epidemic, causing the sheep to perish in great numbers, the quantity of wool produced in Australasia is likely to continue to increase, and if wool prices are to be higher, as many believe, it will not be through any prospective check in the increase in the wool product of Australasia.

[Justice, Bateman & Co.—Circular of April 1, 1896.]

In their wool circular of March 3, Messrs. Helmuth, Schwartz & Co., of London, report that the world's supply of raw wool available for consumption last year (1895) amounted to the enormous figure of 2,342,000,000 pounds, or 130,000,000 pounds more than that for the preceding year. This increase, notwithstanding the falling off in the clip of the United States, was much greater than was anticipated. This was partly due to the increase in the clip of Australia, the River Plate production, and from new sources of supply, among which may be mentioned 60,000 bales from China in 1895, as against only 5,000 bales in 1885, and from Punta Arenas (a comparatively new wool-growing country in the extreme southern part of South America) where the exports in 1895 amounted to 10,500 bales, as against only 237 bales in 1885.

The yield of the River Plate wools is considerably increased by the extensive crossing of Lincoln rams upon merino flocks, increasing the supply of both mutton sheep, and of coarse or cross-bred wool (similar to American low medium or quarter-blood combing) which comes to the United States mostly in a skirted condition.

Of the total increase in the world's supply of wool for 1895, no less than 93,000,000 pounds were imported to America, and only 37,000,000 pounds were added to the quantity available for European manufacturers.

Messrs. Helmuth, Schwartz & Co. comment upon the fact so well known here that the United States in 1895, in addition to the unprecedented imports of raw wool, also imported manufactures of wool to the extent of over \$60,000,000, as against less than \$17,000,000 for the preceding year.

This increase in the American imports of woollen goods is roughly calculated as equal to 130,000,000 pounds of raw wool, which is exactly the amount of the increase in the world's supply of the year 1895. If American wool had been used to manufacture the increased amount of imported woollens, more than one-half of the entire American clip would have been consumed in their production.

The extraordinary imports of wool and woollens by the United States (see accompanying Tables) relieved Europe of the heavy accumulations of wool that for four years had been depressing the world's prices. After America took this surplus, foreign prices advanced, but the transfer of this surplus to the United States increased the supply here so greatly that prices for domestic wool declined.

As the development of the industry in Australia and the River Plate was extraordinary last year, it may be interesting to inquire into the supply for 1896. It is estimated that the increase in the River Plate will be 30,000 bales (equal to 60,000 bales of Australian wool), but the severe drought in Australia has diminished the flocks and it is estimated that there will be a shortage there this year of 160,000 bales, which is partly offset by the increase in the River Plate, leaving a net shortage from these two sources of about 100,000 bales.

The increase in the imports of wool, including that used in the manufacture of woollens imported in 1895, over the average of the previous four years was over 257,000,000 pounds (a quantity within 37,000,000 pounds of the American wool production of 1895), an increase of about 114 per cent. The effect of this extraordinary increase in imports upon American prices is now just beginning to be seriously felt.

[Justice, Bateman & Co.'s circular of May 1, 1896.]

In considering the favorable influence of the depletion of stocks in Europe upon American prices it is necessary to consider the whole world's supply. The past year has shown that a surplus (that for years was more than Europe could consume) was

transferred in less than twelve months to the United States, relieving the European market and depressing the American market.

Messrs. Helmuth, Schwartze & Co., of London, in their March circular publish a table showing an increase in the world's supply of wool between 1891 and 1895 to have been over 221,000,000 pounds. That increase was about the quantity produced in excess of the requirements of European machinery. The shortage in the American clip in consequence of the destruction of the flocks in 1895 would have attracted to this country a portion of this surplus in any event, but the speculation of last summer (by which for a few weeks the domestic clip was practically "cornered") was responsible for the most of it. The domestic clip, added to the importations of all kinds, gave the United States in 1895 a total supply of 778,000,000 pounds, as against only 554,000,000 for the average of the previous four years (which was ample), showing a net excess of 223,000,000 pounds, notwithstanding the large decrease in the American clip. The imported addition to the average American supply in one year is almost exactly the same as the increase in the world's supply since 1891, confirming the assertion that Europe's surplus was in 1895 transferred to the United States.

That portion of the excess over our normal supply which is represented by imported textiles having paid the duties, must remain here until consumed; but, in view of the depletion of European markets, an important amount of the raw material now here will probably be required abroad. Reshipments have already commenced, and even American wool to the extent of experimental shipments is finding its way to European ports. The United States at present appears to be the cheapest market in the world in which to buy wool, and if the shortage in Australia is as serious as European wool circulars state, large drafts will probably be made upon the United States for at least a portion of our imported surplus.

The value of wool in the Eastern markets at the present moment is determined more by export value than by its value to American manufacturers, many of whom are no longer buyers because of an overstock of imported raw material, or else are without orders for goods in consequence of their usual markets having been monopolized by foreign manufacturers. The unusual conditions now prevailing are the results of the practical working of the first year of the new tariff law, and the business confusion at the opening of this the second year appears to be greater than was that of the first. The resources of the nation, however, are enormous, and, although during the past year the United States imported more wool and woolens than were brought out before in two years added together, the conditions are not wholly unfavorable, as indications point to the marketing of the coming clip at prices that will make it tempting and safe for investment, even if it should become necessary to carry it for a time in order to realize a profit.

[Justice, Bateman & Co.—Circular, June 1, 1896.]

#### EUROPEAN SUPPLY.

A good deal of prominence has been given in foreign markets to the shortage in the wool clip of Australia as decreasing the world's supply, but the official records of imports and exports, published by Messrs. Helmuth Schwartze & Co., of London, in their wool report of May 15th, show that the increase in wool production in other parts of the world has been sufficient to swell the total imports and exports of Europe and North America beyond that of any previous year. The figures are as follows:

|            | Bales.    |
|------------|-----------|
| 1891 ..... | 2,385,000 |
| 1892 ..... | 2,541,000 |
| 1893 ..... | 2,488,000 |
| 1894 ..... | 2,595,000 |
| 1895 ..... | 2,783,000 |

#### FARMERS AND THEIR FREE-TRADE CLOTHING.

The average production of clean scoured wool by each farmer in Ohio, Michigan, and New York State during President Harrison's Administration and under McKinley law protection, was 600 pounds, the value of which was 60 cents per pound. Under Cleveland's Administration and Gorman tariff free trade the value of the same has been 30 cents per pound. The net gain to each farmer by reason of cheaper free-wool clothing (allowing 3 pounds of pure scoured wool to eight annual new suits of clothing to each family), would be \$7.20. Giving credit for

# 1548 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

cheaper clothing, the net average loss on the wool and sheep by reason of free wool has been \$422.80, as the following table will show:

|                                                                                              |           |
|----------------------------------------------------------------------------------------------|-----------|
| March, 1893, and previous, 600 pounds of scoured wool, at McKinley price, 60 cents .....     | \$360. 00 |
| October, 1895, and previous, 600 pounds of scoured wool, at Wilson-law price, 30 cents ..... | 180. 00   |
| Loss on wool .....                                                                           | 180. 00   |

EFFECTS OF FREE WOOL—IMPORTATION OF WOOLEN TEXTILES INCREASED 242 PER CENT—A LOSS OF \$100,000,000 IN THE PURCHASING POWER OF THE AMERICAN NATION CAUSED BY THE WILSON-GORMAN LAW.

The statesmen who outlined the policy of the present Administration in passing the Wilson bill claimed that free wool would give American manufacturers the markets of the world, and instead of being limited in the sale of their production to the American market as heretofore, they could invade foreign markets. We are now nearly half way through the second year of actual experience with free wool. Have the predictions made by the eminent statesmen who shaped the policy of the present Administration been realized?

In the following table (Schedule B) is an enumeration of the quantities of woollen textiles imported during the years 1891 to 1895. The first four years were under the McKinley law and the last year was the first full year of the Wilson-Gorman law. The average annual importations of woollen textiles during the McKinley period were valued at the custom-houses at \$29,500,000. In the first full year of the present law they were valued at \$57,500,000, an increase of 95 per cent over the average of the whole McKinley period, and an increase of 242 per cent over the importations of the year 1894, the last year of the McKinley law.

Instead of having invaded the markets of the world by reason of the repeal of the McKinley law, we have narrowed our home market nearly one-half, thus closing many mills and throwing workmen and working women out of employment.

If the woollen goods imported in 1895 in excess of the imports of the previous year had been made in America, of American wool, it would have taken more than half of the American wool clip to produce them. It would have distributed \$20,000,000 to American woolgrowers, and it would also have distributed \$20,000,000 in wages among one class of labor, namely, American woollen factory operatives.

Can any one form an estimate of what the loss of \$20,000,000 in wages of a single class of American working people means? It is fair to assume that each dollar paid out in wages for labor circulates five times over within the year. That is to say, the \$20,000,000 which was lost by factory operatives by the loss of the woollen good imported, over and above the amount imported in the previous year, is equivalent to a loss in the purchasing power of the American nation of \$100,000,000.

An examination of the following table (Schedule B), illustrated by parallel black lines, will convey some idea of the extent to which the home market has been lost to American woollen manufacturers by the repeal of the McKinley law:

SCHEDULE B.—Imports of manufactures of wool in textiles.

|        |              |       |                                                                  |
|--------|--------------|-------|------------------------------------------------------------------|
| 1891.. | \$33,951,916 | _____ | } McKinley law. Average, \$29,585,373.                           |
| 1892.. | 37,415,111   | _____ |                                                                  |
| 1893.. | 30,165,094   | _____ |                                                                  |
| 1894.. | 16,809,372   | _____ |                                                                  |
| 1895.. | 57,559,823   | _____ | { Wilson-Gorman law. Increase, 300 per cent, measured by pounds. |

Increase in textile imports 1895 over 1894, 242 per cent.

Consider now the imports of raw wool in the year 1895 in comparison with those of the McKinley period, which averaged over 100,000,000 pounds annually.

The increase in the first full calendar year of free wool was equal to 97 per cent, or, in other words, the quantity of raw wool imported in 1895 was nearly double the average of that imported in a single year. We have had the wool of the world dumped upon us at a time when our consumption of wool has been narrowed nearly one-half by the inundation of foreign textiles.

The American farmers are to-day holding wool which they can not sell at much more than half of the old McKinley price, because the American markets have been flooded with the former surplus supply of wool of the world, as shown in schedule A:

SCHEDULE A.—Imports of raw wool.

|        | Pounds.     |                                   |                                              |
|--------|-------------|-----------------------------------|----------------------------------------------|
| 1891.. | 139,317,571 | _____                             | } McKinley law. Average, 121,436,529 pounds. |
| 1892.. | 167,784,090 | _____                             |                                              |
| 1893.. | 111,751,348 | _____                             |                                              |
| 1894.. | 44,595,407  | _____ 8 months McKinley law.      | } Wilson-Gorman law.                         |
| 1894.. | 71,141,413  | _____ 4 months Wilson-Gorman law. |                                              |
| 1895.. | 248,989,217 | _____                             |                                              |

Increase in wool imports 1895 over average of 3½ years of McKinley law, 122,708,995 pounds = 97 per cent.

#### HOW FREE WOOL NARROWS THE HOME MARKET.

[Justice, Bateman & Co.'s circular of September 1, 1896.]

#### FREE TRADE NARROWS THE MARKET AND CREATES AN OVERSUPPLY.

The machinery thrown out of employment has so far decreased the demand for wool that there is now twice as much in sight as at present seems likely to be used before the end of the year. The consumption of raw wool by American machinery during the four years of the McKinley period, 1891 to 1894, averaged about 460,000,000 pounds annually. On the 1st of January, 1896, the quantity carried over was 100,000,000 pounds. That imported from January 1, to July 1, 1896, was 110,000,000 pounds and the American clip of this year is estimated at about 250,000,000 pounds, making a total of 460,000,000 pounds, which would be an ample supply for the American machinery for a whole year, even if it were as well employed as during the McKinley period when more American wool was manufactured than at any other time.

The quantity of woollen textiles imported then averaged annually only 20 per cent of the quantity then consumed by the American people. The remaining 80 per cent was all of home manufacture. Since the Wilson law has been in operation the imports of manufactures of wool have doubled and would now be 40 per cent of our total consumption if the latter was as great as in the McKinley period, but as it is much less, the proportion of imported textiles is fully 50 per cent of our present consumption, narrowing the output of American mills to this extent. Thus the Wilson tariff law, which was to widen the market for American manufacturers by giving them free wool, has not only not done this, but has narrowed it fully one-half.

What has Hon. William J. Bryan to say to this outcome in view of his speech in the second session of the Fifty-third Congress on the Wilson bill, when he said:

"Speaking for myself, it is immaterial, in my opinion, whether the sheep grower receives any benefit from the tariff or not. I am for free wool, in order that our woollen manufacturers, unburdened by a tax upon foreign wool, and unburdened by a like tax upon home-grown wool, may manufacture for a wider market."

#### HOW MUCH OF THE PRESENT SUPPLY CAN BE USED.

Were the American nation consuming as many goods as under the McKinley period the increase in imported woollens would have left room only for an output of woollen textiles requiring in their manufacture 344,000,000 pounds of raw wool for the year 1896, instead of 460,000,000 pounds as before. But owing to the decreased purchasing power of the nation, in consequence of the destruction of our industries caused by the Wilson law, or owing to the threat made by the silver Senators (who were responsible for the defeat of the Dingley bill) that there shall be no tariff or financial legislation in the coming session of Congress, nor the next one, unless the free coinage of silver goes with it, or all of these reasons together, the demand for goods has been so far checked that the amount of wool likely to be consumed by the American

machinery during the year 1896 bids fair to be very little over half of our normal consumption under the McKinley period. This may be only 230,000,000 pounds. This is only half of the supply in sight on the 1st of July. The amount of wool which has been imported since the 1st of July is not counted at all, and it is not likely to be equaled by that being reshipped to Europe. Relief to the wool market may come through speculation growing out of a restoration of confidence, resulting from McKinley's election and the prospect of the restoration of wool duties within a year thereafter, or it may come through the export of the surplus to Europe. A movement in this direction has already begun.

There has been returned to Europe recently by one of the largest Massachusetts mills about 2,000 bales of Australian wool, and as much more has been shipped by other parties, including 500 bales of French scoured wool. The first to go back to Europe of course will be the imported qualities that are well known and popular there. It is not improbable, however, that important shipments of American wool will also be made, notwithstanding the disfavor with which experimental shipments have been received.

The Yorkshire Factory Times, under date of July 24, contains the following:

“AMERICAN WOOL ON THE ENGLISH MARKET.

“The Yankee, ever on the lookout for anything that benefits himself, has a weakness for screeching out when in fair fight he is beaten. It appears that Mr. Claude Meeker, the American consul, has reported to his Government that the stuff which the Yankee calls American wool is not meeting with that due appreciation which Brother Jonathan fondly imagined it would. Of course, it is not the material which is at fault; it is the stupid English wool sorter who does not know how to handle it. The fact that the stuff can scarcely be called hair, and yet may not be designated wool, and is thus not at all suitable for the purposes of the Bradford trade, is a secondary consideration. What the Yankee is annoyed at is that, notwithstanding the manufacturer in America does not see his way to pay the price asked for by growers, the English buyer is no less cute. There has been, we are told, several hundred thousand pounds of American wool upon the English market, which was sent back to the land of the Stars and Stripes because the prices asked could not be realized.”

THE HOME MARKET NARROWED.

Serious alarm in financial circles over the possibility of experiments with a new and untried system of currency, upsetting the basis of values upon which business rests, has had much to do with the temporary contraction of the market for woolen goods. But, aside from that, the market has been enormously narrowed by the doubling of imports of foreign woolen textiles. The imports for the second fiscal year under the Wilson law, ending June 30, 1896, were over 46 per cent larger than those of the last calendar year, and the latter were 242 per cent larger than the imports for the last year of the McKinley law. The increase alone in the imports of foreign wools since the repeal of the McKinley law represents a quantity of woolen goods which if made in America of American wool would have absorbed more wool than is now annually raised in the United States. This is the way the tariff has worked which the Hon. William J. Bryan supported “in order that our manufacturers might manufacture for a wider market.” Under it they have not only had no wider market, but have been deprived of our home market, thereby destroying the only customer that the American woolgrower ever had.

[Justice, Bateman & Co.'s circular, August 1, 1896.]

TABLE C.—*Total imports of wool for twelve months ending June 30, 1895 and 1896.*

| Year.      | Quantity.      | Value.         |
|------------|----------------|----------------|
|            | <i>Pounds.</i> |                |
| 1895 ..... | 191, 326, 243  | \$23, 996, 224 |
| 1896 ..... | 230, 811, 473  | 32, 451, 242   |

Increase, 39,485,230 pounds, or 20 $\frac{3}{4}$  per cent over 1895.

*Total imports of manufactures of wool for twelve months ending June 30, 1895 and 1896.*

|            |                |
|------------|----------------|
| 1895 ..... | \$36, 542, 396 |
| 1896 ..... | 53, 494, 193   |

Increase, \$16,951,797, or 46 $\frac{1}{2}$  per cent over 1895.

EFFECT OF ONE YEAR OF FREE WOOL ON AMERICAN AND FOREIGN MARKETS.

[Justice, Bateman & Co.'s circular, March 1, 1895.]

In order to show how far free wool has lowered the fleece value, we give below a table comparing the price of eight leading grades of American wool on March 1, 1893,

before the McKinley law was assailed, with prices to-day, or six months after wool was put on the free list.

|                                                 | Prices in<br>Mar. 1893,<br>before the<br>McKinley<br>law was<br>assailed. | Prices<br>Mar. 1, 1895,<br>six months<br>after wool<br>was put on<br>a free-trade<br>basis. | Percent-<br>age of<br>decline in<br>two<br>years. |
|-------------------------------------------------|---------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------------|
|                                                 | <i>Cents.</i>                                                             | <i>Cents.</i>                                                                               |                                                   |

[Justice, Bateman & Co.'s circular, August 15, 1895.]

#### THE LONDON AUCTIONS.

The details of the London sales which closed on the 30th of July are now at hand. The feature that seemed most conspicuous was the brisk competition of American buyers, which was apparent from the beginning to the end of the sales. America appears to be the greatest outlet for wool in all conditions of manufacture, but principally for the long wools, such as are combed, the quantity of short wools taken being inconsiderable. As the closing prices of each series are considered in Europe and throughout the world as the standard of value during the interval between the auctions, it is well to analyze the result of the last sales in order to learn just where American values really are. To do this the sale just closed should be compared with the previous one as well as with the sales of July, 1894. This has been so admirably done in a printed table issued by Messrs. Buxton, Ronald & Co., of London, that we reprint it below. This table gives a list of sixteen different qualities of Colonial wool, all of which are higher than in May, but only six of which are higher than in July of 1894, three qualities bringing the same as one year ago, and seven qualities being lower than in July, 1894, the lowest being short clothing wool. A Liverpool wool circular estimates the quantity of French scoured wool imported to the United States this summer at over two and one-half million pounds, clearing out considerable accumulation of old stock.

*Prices at the London sales for July, 1895, May, 1895, and July, 1894, compared.*

| Description.                                              | 1894.                    |              | 1895.                   |              |                          |              | Lower than July, 1894. | Higher than May, 1895. |

# 1552 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

[Justice, Bateman & Co.'s circular, August 31, 1895.]

## ONE YEAR OF FREE WOOL.

The advance in wool from the lowest point in May has been very considerable. But after one year's experience with free wool prices are still lower than at this time last year when the new tariff law went into effect, as will be seen by the following Table A, giving a number of the principal grades of American wool none of which are higher, while the majority are from 1 to 2 cents per pound lower than at this time last year.

TABLE A.—Comparison of prices September 1, 1894 (when the free wool bill was passed), with September 1, 1895—one year after.

## ONE YEAR OF FREE WOOL COMPARED WITH ONE YEAR OF MCKINLEY PROTECTION.

The predictions of a distinguished Senator who stated in a public speech that wool under one year of free trade would reach the highest prices under the McKinley law, have not been realized, and in order to show how domestic wool prices compare after one year of actual practice with each of the last two tariff laws, we publish in Table B the prices for the principal grades of American wool on October 1, 1891, when the McKinley law had been in force one year and the prices at this date, when the Wilson law with free wool has been in force one year; in the outside column is the number of cents per pound that wool is lower after one year of actual trial with free trade than after one year of actual trial of McKinley protection. Below the quotations for American wool will be found the London quotations of similar grades of foreign. It will thus be seen that the leading grades of American wools under free trade were from 7½ to 15 cents per pound lower on fleeces and from 15 to 27½ cents per pound lower on scoured under one year of free trade than under one year of the McKinley law, while foreign wools were either unchanged or only from 1 to 2 cents per pound lower.

Comparison of prices for leading grades of American wool September 1, 1895 (about one year after the passage of the Wilson free wool bill), with prices for the same grades in October, 1891—about one year after the passage of the McKinley law.

[American wool, Philadelphia and Boston prices.]

# PRICES OF AMERICAN WOOL ON MARCH 1, 1893, AUGUST 27, 1894, AND OCTOBER 1, 1894.

Table showing in parallel columns the prices of the principal grades of American wool on March 1, 1893 (which was immediately before the protective influences of the McKinley law upon American values were nullified), and October 1, 1894, thirty-five days after the free-wool bill became a law; also showing an average decline of 37 per cent during the interval; also showing the difference between protected-wool prices and free-wool prices in the United States at the above dates. Also showing in parallel columns the prices of the same grades on the 27th of August, 1894 (the date when the free-wool bill became a law), and October 1, thirty-five days thereafter, with an average decline of 7 per cent during that interval.

[Prepared by Justice, Bateman & Co., wool commission merchants, October 1, 1894.]

Per cent.

Average decline in the nineteen months from March 1, 1893 (before the McKinley law was assailed), to October 1, 1894 .....

Average decline since the passage of the free-wool bill (thirty-five days) .....

NOTE.—American wools are to-day practically on a parity with wools of the same kind and quality in the London market, which have remained practically unchanged for over twelve months.

DECLINE IN AMERICAN PRICES AFTER PRESIDENT CLEVELAND'S  
INAUGURATION IN 1893.

[Justice, Bateman &amp; Co.'s circular, May 1, 1893.]

## FOREIGN PRICES.

The weakness in the wool market here and its firmness in Europe is attracting attention, as it implies a prospective loss of the home market for American woolen goods and a gain of the latter by foreigners. It is expected that wool sooner or later will be placed on the free list, and that foreign and domestic wool must then bring the same price. With that in view, some dealers who have heretofore operated mostly in domestic are now turning their attention to foreign wool as the safer article to deal in, as in leveling the prices it is believed that foreign wool will advance somewhat. The latter can be left in the custom-house with the duties unpaid until it is wanted; this gives the owner the option of reshipping it to London if it should be advisable to do so.

## DIAGRAM.

The diagram (p. 215) giving the course of prices from March 1 to date for six grades of Ohio, Pennsylvania, and similar wools, reveals the fact that the decline since Mr. Cleveland's inauguration has been about 18 per cent on XX washed wools, about 27 per cent on medium washed, about 28½ per cent on coarse washed, about 33 per cent on fine unwashed, about 24½ per cent on medium unwashed, and about 28½ per cent on coarse unwashed or quarter blood. Notwithstanding this phenomenal drop in prices, they are not yet in all cases near the free-wool level.

[Justice, Bateman &amp; Co.'s circular, November 1, 1893.]

## THE AVERAGE PRICE OF WOOL UNDER DIFFERENT TARIFF PERIODS.

The highest duties ever collected upon imported wool were under the tariff law of 1867, when prices for American wool averaged higher than at any subsequent period. From 1868 until 1883, under the tariff law of 1867, Ohio washed medium averaged over 50 cents per pound. In 1883, when duties were reduced over 30 per cent, Ohio medium averaged about 36 cents per pound as against 50 cents per pound under the higher tariff law of 1867. The McKinley tariff was passed in 1890, and although the duties were increased on wool only 1 cent per pound, the average price of Ohio medium from 1890 to March 1, 1893, still averaged 36 cents per pound, although wool of the same kind and quality in the free-trade markets of the world declined nearly 30 per cent. The American tariff from 1868 to March 1, 1893, caused American wools to average during all of that period double their scoured value in London and other free-trade markets of the world, and this difference of double the price of "free wool" was maintained until the present Administration commenced its attack on the American wool industry.

## TABLE.

In the first column of figures in the following table will be found the value of some of the leading grades of American wool on the 1st of March, 1893, when President Harrison was still in office. In the second column is the market value of the same qualities on the 1st of November, 1893, eight months after the present free-wool administration was inaugurated. In the third column is the percentage of decline which has taken place since Mr. Cleveland took office, showing the progress that has been made toward free-wool prices. In the fourth column is the free-wool or London value of these same grades of American wool, which value has remained practically unchanged from March 1 to November 1. In the fifth column is shown the cents per pound which wool prices must yet fall in order to reach the present free-wool or London value. This table shows that while the market has traveled a long way toward free-wool prices, there must still be a decline of from 2½ to 8 cents per pound to reach free-wool value, unless there should be an advance in the outside markets of the world.

## 1556 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

*Table showing the percentage of decline in the principal grades of American wool during the eight months following March 1, 1893, with the free-wool value during the same period.*

### COMPARISON OF THE COURSE OF THE FOREIGN AND AMERICAN WOOL MARKETS AFTER PRESIDENT CLEVELAND'S INAUGURATION IN 1893.

[Justice, Bateman & Co.'s circular, January 1, 1894.]

#### DIAGRAM.

The prospect of the removal of the duty on wool comes at an unfortunate time, as wool, throughout the world, although already lower than ever before, has been steadily declining. Washed XX Ohio wool has fallen in price 21½ per cent since March 1, in anticipation of free wool. Unwashed XX Ohio, as well as nearly all of the territorial wools, has declined within the same time 33½ per cent. Port Philip (Australian) unwashed fleece, which is the foreign wool nearest in quality and shrinkage to fleece washed XX Ohio, has declined in the free-trade market of London only 9 per cent, as shown by the accompanying diagram:

[Justice, Bateman & Co.'s circular, October 1, 1894.]

#### DIAGRAM.

In order that the course of prices from March 1, 1893 (preceding the change of Administration), to the present time may be better understood we have prepared the above map or diagram showing the value of the standard grade of Ohio XX on the 1st of each month between these dates, which also shows a decline of 39½ per cent in the nineteen months covering the transition from protected to free-wool prices. For comparison of London with American values we select a similar standard grade of Australian wool, commercially known as "Good Port Phillip," the value of which since August, 1893, with but temporary exceptions, has been about 18 cents in London. Under the duty of 11 cents per pound of the McKinley law, Ohio XX was worth 30½ cents on March 1, 1893, and only 18½ cents to-day, or thirty-five days after wool was put on the free list, and the intermediate prices in the interval indicated the anticipation or discounting of the free-wool prices. Wool of the same kind and quality as Ohio XX in the London market at this date is worth 18 cents, with the difference against it and in favor of the "Good Port Phillip;" that the latter is skirted wool, while Ohio XX is not. That is to say, the inferior and stained leg and belly pieces have been torn off the Australian fleece, so that it requires no further sorting, while the Ohio fleece, which contains these pieces, involves the cost of assorting in addition to some loss on these inferior parts.

#### WOOL PRICES MARCH 1, 1893, AND OCTOBER 1, 1894.

In response to almost daily requests for a comparison of prices of American wool on March 1, 1893, with October 1, 1894, and for a comparison of prices on August 27, 1894 (the day wool was put on the free list), with prices of to-day, we have prepared the table on the opposite page. Prices current on March 1, 1893, were those under the McKinley law before its protective influences were impaired by threatened repeal, which was the case almost immediately afterwards. The date of August 27 was selected for comparison with the present time in order to show how far free wool has

depressed the price of American wool during the thirty-five days that foreign wool has been free of duty. Our quotations of to-day are even higher than some of the other Eastern wool market reports would indicate, so that the average decline of more than 7 per cent in American wool since the duties were removed is less than half of the extreme decline on the merino qualities, which comprise three-fourths of the whole American wool product. It will be noticed that while the average decline in nineteen months has been over 37 per cent, the maximum decline on merino qualities has exceeded 40 per cent.

#### DECLINE IN FOREIGN WOOL MARKETS DURING McKINLEY PERIOD.

[Justice, Bateman & Co.'s circular, August 1, 1892.]

##### THE DECLINE IN EUROPE AND AMERICA DURING THE PAST YEAR COMPARED.

According to the following table published by Messrs. Buxton, Ronald & Co., showing the percentage of decline on each grade of merino wool in London from June, 1891, to June, 1892, the average decline has been 16 per cent, and the maximum decline over 21 per cent, while the average decline in this market for the same quality of domestic wool for the same period was only 8 per cent, and the maximum decline less than 12 per cent. The decline in manufactures of wool in England for the same period was 26 per cent, while the decline in the United States was only 6 $\frac{2}{3}$  per cent.

[Justice, Bateman & Co., circular, August 10, 1892.]

[Justice, Bateman & Co.'s circular, November 1, 1892.]

##### FOREIGN MARKETS.

Private advices from London report the European wool trade quiet, with buyers reserved, and with a downward tendency as to prices for the bulk of fine or merino wool offered, showing weakness which characterized the market for all qualities except those that are suitable for the United States. The American demand partially sustained values on the small stock of the light, open Australian fleeces. We give below a table published by Messrs. Buxton, Ronald & Co., of London, in which they give in separate columns the percentage of decline in price since September, 1891, and also since July, 1892. The heaviest decline was in the qualities that are about the same as the bulk of the American merino clip (exclusive of Ohio and Michigan fine delaine). We have classified the wools in two divisions. The first division represents the great bulk of the wools sold in London, which are similar to the bulk of the American clothing wools after the fine delaine has been taken out. The second division embraces wools that correspond with the best Ohio and Michigan selected fine delaine. The wools in the latter division were in very limited supply at the last London auction, and the American demand in addition to the European demand to a large extent sustained the values of the better qualities, while that which lacked the American support and was the bulk of the stock declined heavily. The specific

# 1558 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

duties of the McKinley tariff law make it unprofitable to import anything but wools in high condition corresponding most nearly with the fine delaine fleeces of Ohio and Michigan. With free wool the American clip would be brought in competition with the great bulk of those foreign wools which have declined so heavily.

## FIRST DIVISION.

## A DECLINE OF OVER 55 PER CENT IN FOREIGN WOOL PRICES IN THIRTY-FOUR YEARS.

[Justice, Bateman & Co.'s circular, February 1, 1894.]

### FALL IN FOREIGN PRICES.

Free traders have been fond of drawing comparisons between the lower price of American wool under the McKinley law and prices current previous to 1860. It is true that previous to 1860 the clean scoured value of Ohio XX was 80 cents and its clean scoured value under the McKinley law before it was menaced with repeal in the early part of 1893 was 70 cents, a decline of 12½ per cent. This fact has been given great prominence, but the advocates of this view have been ominously silent as to the 46 per cent decline in London in wool of the same kind and quality during the same period. For some years previous to 1860 the London value of Australian clean scoured wool similar to XX Ohio was 65 cents, but in 1893 its value was only 35 cents, a decline in the free-trade markets of the world of over 46 per cent, as against a decline under protection in the United States for wool of the same quality and condition of only 12½ per cent. Further evidence of this fact, but exhibiting a still greater decline in foreign markets, is shown in the publication of a table by Messrs. Geo. Wm. Bond & Co., of Boston, giving all kinds of colonial wools imported into England and America in 1860 and in 1894, showing a falling off in value in that period of over 55 per cent.

*Importation of colonial wools into Europe and America at various tariff periods between 1860 and 1894, with approximate value per bale.*

| Year.     | Bales.    | Average value per bale in English money. |
|-----------|-----------|------------------------------------------|
| 1860..... | 266,000   | £25 $\frac{3}{4}$                        |
| 1868..... | 939,000   | 18 $\frac{1}{2}$                         |

\* This shows why wool was lower in price after the McKinley law was passed than it had ever been before. The decline in the markets of the world caused a corresponding decline in America. A decline of 55 $\frac{1}{2}$  per cent in thirty-four years.

### LONDON SALES. 22,000 BALES.

[Extract from Philadelphia Press of December 15, 1896.]

#### FLOOD OF WOOL THREATENED.

At the London colonial wool auctions, which closed on Thursday, 22,000 bales were purchased for America, most of which was Australian wool. The yield of scoured wool in this purchase is more than that of the entire wool clip of any American State, with the exception of eight of the largest.

The wool purchased for America at this single auction sale will produce more scoured wool than the whole annual wool clip of Utah or Michigan. It is over 68 per cent of the wool clip of New Mexico, over 67 per cent of the clip of Texas, more than 62 per cent of the clip of Oregon, over 57 per cent of the clip of Ohio, and more than 53 per cent of the clip of Montana.

A wool dealer says that unless the Dingley bill should be passed as a check to this flood of imported wool, which now comes in free of duty, there will be three and possibly four more sales of wool at London before a new tariff law can be passed, even if an extra session is called for that purpose, and the purchases at the last sales may be expected to be repeated at the subsequent sales.

### WOOL A MUNITION OF WAR.

#### WHY SHOULD WOOL BE FREE?

No satisfactory reason can be given why wool should be exposed to the destructive influences of foreign competition. It is a necessity of our comfortable existence, and no army without wool could successfully conduct its operations in time of war. Wool is as much a munition of war as any other material. If coal is not to be considered a raw material, there is much more reason why wool can not be so considered, as it takes a whole year for a sheep to produce its fleece, yet coal in one hour can be got ready for market. The element of labor in marketing a ton of wool exceeds many-fold that which is expended in marketing a ton of coal, yet there is a duty upon coal and none on wool. If unfavorable legislation should close the coal mines of this country for a thousand years, the coal would still remain there ready for use whenever the nation was once more permitted to resume its industrial activities. But when the flocks of sheep disappear, as they are now doing, they cannot be suddenly restored. If this industry is to begin anew, it will take many years to reach its present proportions, and if the effect of the blow dealt by free wool to the woolgrowing industry is permitted to continue, it will cause its practical destruction. The ultimate result of this would be not only dependence upon foreign countries for our wool supply, but the loss to the nation of the value of the domestic clip, for instead of distributing its cost among woolgrowers at home, to be spent at home, it must be paid in gold to foreigners, with the ultimate result of higher prices for clothing. This would be a decided loss to the whole nation without any corresponding gain.

# 1560 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

## DECREASE IN THE PROPORTION OF AMERICAN WOOL CONSUMED UNDER FREE WOOL.

*Comparison of the total supply of wool for the year 1895, with the average supply of the previous four years, including the American production, the foreign wool imported in the raw state, and the foreign wool imported in manufactures of wool reduced to the quantity of raw wool used in their production, an increase of over 40 per cent.*

Note 1. The shrinkages and scoured yield, 1880 to 1885, inclusive, are estimates of Justice Bateman & Co.

Note 2. The shrinkages and scoured yield, 1886 to 1896, are estimates of the National Association of Woollen Manufacturers.

Note 3. The number of sheep is from the reports of the United States Department of Agriculture, with the exception of 1896, which is the estimate of the National Association of Woollen Manufacturers.

Note 4. The wool clip is from the Wool Book of 1895, published by the National Association of Woollen Manufacturers.

### COMPARISON BETWEEN PRICE OF WOOL IN LONDON AND AMERICA FROM 1868 TO 1891.

[Justice, Bateman & Co.'s circular, October 1, 1892.]

#### WOOL IN LONDON SINCE 1867 HAS COST LESS THAN HALF THE COST OF THE SAME QUALITY OF AMERICAN WOOL UNDER PROTECTION.

As many errors and misstatements have been published as to the relative value of "free" wool in London, and the same quality of protected wool in the United States, we have tabulated below the average annual London free-trade price, and the American protected price of the same quality of medium wool for each year from the time of the passage of the tariff law of 1867 up to the end of 1891. During all that time the average cost of similar scoured wool in London has been less than half that of similar scoured wool under protection in the United States, or, in other words, the protected price of American wool has averaged more than double the free-trade London price from 1867 to December, 1891. The extreme right-hand column gives the percentage of difference between free wool in London and the same wool under protection in the United States for each year following the passage of the tariff law of 1867, up to and including the year 1891. The average of all these years shows that the average price of scoured wool in London has been 51 per cent below the average price of the same wool in the United States, or, to reverse the statement, the average price of scoured American wool under protection has been more than double the free-trade price in London. Woolgrowers who are dissatisfied with the prices now current for wool can see by the table that their wool if sold in free-trade London would have brought only about one-half of the price which they obtained in the United States. If duties were removed, the London price would then be the American price, and the latter could no longer average about double the London price, as has been the case ever since the tariff law of 1867 was passed.

## 1562 SCHEDULE K.—WOOL, AND MANUFACTURES OF WOOL.

*Table of comparison between protected American wool and similar wool in free-trade London.*

| Year.        | Ohio medium fleece. Shrinkage 40 per cent. | Australasian medium fleece. (New Zealand cross-bred grease.) Shrinkage 40 per cent. | American scoured medium. | Australasian scoured medium. | Percentage of cost of free wool below protected wool. |

Average percentage of cost of free wool in London below protected wool in the United States between 1868 and 1877, on currency basis 50.95 per cent.

Average percentage of cost of free wool in London below protected wool in the United States between 1878 and 1891, on gold basis 51.32 per cent.

We call attention to the fact that the American quotations from 1868 to 1877 were in currency, while the English quotations for the same period were in gold; that medium wool of the same grade, quality, and condition in free-trade London was more than 50 per cent below the value of the same kind of wool under protection in the United States. We also call attention to the fact that the quotations for American and English wool between 1878 and 1891 were both in gold, and during this period wool of the same diameter of fiber and in the same condition averaged 51 per cent lower in free-trade London than under protection in the United States.

#### UNDER ADEQUATE PROTECTION WE COULD SOON GROW ALL THE WOOL WE NEED AT HOME.

[Justice. Bateman & Co's circular, March 1, 1894.]

#### GROW OUR WOOL AT HOME.

The American sheep husbandry under adequate protection has twice made such rapid headway in the increase of flocks as to lead to the assurance that with the continuance of that protection we would soon produce the total amount of wool consumed by this country. During the last twelve years of the tariff law of 1867, the American clip increased 100 per cent, that increase being from 170,000,000 pounds in 1873 to over 340,000,000 pounds in 1884. If the duties had not been lowered at the end of that period, it is fair to assume that the same ratio of increase would have continued, in which case we would have produced in 1895 over 650,000,000 pounds, which, including the raw wool imported in the shape of manufactured goods, is the total amount of wool consumed by this country. A serious check to the growth of the wool industry was given by the reduction of duties in 1883, but with the restoration of a portion of those duties by the McKinley law in 1890, such an impetus was given to the wool growing industry that the clip again increased at a rapid rate. The increase was from 310,000,000 pounds in 1891 to 350,000,000 in 1893, so that if the McKinley law had not been assailed, it is fair to assume that by the year 1915 we would produce 650,000,000 pounds.

The actual increases during the two periods alluded to above are illustrated by the solid black lines extending from left to right in the following diagrams. The dotted

lines which continue in the same direction indicate the time at which we would arrive at the production of our entire home consumption of wool.

Diagram showing that at the rate of increase from 1873 to 1884 under the protective influence of the tariff law of 1867, if continued at the same ratio until 1895 the wool clip of the United States would then have reached 650,000,000 pounds, which, including the wool contained in imported goods, is all that is annually consumed by the American people at the present time.

Diagram showing that at the rate of increase from 1891 to 1893 under the McKinley law, if continued at the same rate until 1915 the wool clip of United States would then have reached 650,000,000 pounds, which, including the wool in imported goods, is all that is annually consumed by the American people at the present time.\*

### THE COURSE OF THE WOOL MARKET.

[J. L. Bowes & Bro.'s tables.]

The following table affords an opportunity for the comparison of the past and present position of the various classes of wool:

|                                      | Average<br>1885-1894. | Extremes during the ten years<br>prior to 1895. |         |       |          | 1895.      |              |               |             |

## JUSTICE v. LAWRENCE.

COMMENTS OF HON. THEODORE JUSTICE, OF PHILADELPHIA, ON ADDRESS DELIVERED BY JUDGE WILLIAM LAWRENCE IN COLUMBUS OHIO, JANUARY 13, BEFORE OHIO WOOLGROWERS' ASSOCIATION.

### JUDGE LAWRENCE.

*Gentlemen of the Ohio Woolgrowers' Association:*

We have once more assembled in annual convention to consider the condition of sheep husbandry, and what legislation by Congress is needed in its behalf.

In 1893 the number of sheep in the United States was 47,273,553, with an average value of \$2.66 per head, or a total of \$125,909,264, and a wool product estimated by the Department of Agriculture at 303,151,055, and by J. P. Truit, of Philadelphia, at 348,538,138 pounds, as marketed, generally unwashed, some washed.

The Presidential and Congressional elections of 1892 resulted in the election of Cleveland as President and a Congress in favor of a "tariff for revenue only," with free wool, which even before a free-wool law was enacted, began to produce its effect in reduced prices for wool and the slaughter of flocks. The free-wool bill was passed and became a law August 27, 1894.

Under the free-wool act of August 27, 1894, sheep in the United States declined in numbers until on April 1, 1896, they reached only 36,464,405, of the average value of \$1.70, or a total of \$61,989,488, with a wool product of only 270,474,708 pounds, of the farm value of only \$20,800,000,146. (Senate Doc. No. 17, Fifty-fourth Congress, second session, December, 1896, pp. 143-177, being the memorial of the Farmers' National Congress.)

This was a loss in number of sheep of 10,809,148 since 1893, a loss in value of \$63,919,776, a loss in wool clip of 78,063,430 pounds, which under adequate protection would have been of the farm value of \$13,010,571.

The farm value of wool in 1892, with a meager tariff protection, was \$47,185,283; the farm value in 1896, without protection, was \$20,800,000, or a decline in value from 1892 to 1896 of \$26,385,283.

Hon. S. N. D. North, secretary of the National Wool Manufacturers' Association, says: "The average farm value did not exceed 8 cents per pound" for the wools of the United States in 1896. Justice, Bateman & Co. show that the farm value of Ohio XX fine unwashed merino was, July 1, 1896, only 9 cents, and the wools of Utah and the Rocky Mountain region only 4 cents.

It has been demonstrated that from 1892 to 1896, inclusive, the woolgrowers of the United States lost by free wool \$178,793,121. The items in detail will be found in Senate Document No. 17, December, 1896, pages 24, 27, 177.

In April, 1891, Ohio had 3,796,695 sheep, of the value assessed for taxation of \$10,082,076; in 1896 only 2,293,686 sheep, of the value of only \$3,897,710, a decline in number of 1,503,009 and in value of \$6,184,366. (Senate Doc. No. 17, December, 1896, p. 168.)

The loss in number both in Ohio and in all the States would have been greater but for two reasons:

1. The hope that in the near future a sufficient protective tariff would soon come, and
2. Because all agricultural industries were so depressed that woolgrowing lived to suffer a common calamity.

We need and, with adequate protection, can soon have in the United States 110,000,000 sheep, producing 650,000,000 pounds of wool—all required of every kind for our annual consumption. This would make an increased demand for pasturage, hay, corn, and oats. With adequate protection for wool since 1883, we would now have that number. With that number, fair prices for corn, oats, and hay would now reward the labors of the farmers of the United States. For want of them, the farm value of corn in Ohio is only 18 cents per bushel, oats 13 cents, fat cattle and hogs only \$3 to \$3.25 per 100 pounds, and until the shortage of the wheat crop of 1896, wheat in Ohio for two years commanded only 50 cents per bushel. These prices are

ruinously low—a decline of about 35 per cent in the last twenty years, while the conditions of society require new and more expensive modes of living.

In the States west of Ohio even lower prices and more depression and financial embarrassment exist. The farmers encounter bankruptcy and mortgages, and by the interdependence of industries, distress and ruin are invading all productive employments.

Something must be done to relieve existing conditions, or the Republican party will soon go out of power; the protective policy can not be maintained, and a revolution may come in our monetary policy.

The greatest need to begin the revival of all industries is that which was promised by the Republican national platform of 1896, “the most ample protection for wool.” A wool tariff bill, singly and alone, should be the first measure passed at an extra session of Congress, because it is first in importance to begin to restore prosperity, and sheep husbandry has suffered more by hostile legislation than any other industry in our whole national existence.

The National Woolgrowers’ Association in December, 1895, agreed upon the draft of a bill asking for a duty of 12 cents per pound on unwashed merino. This is necessary and just.

MR. JUSTICE.

At the time the National Woolgrowers’ Association, in December, 1895, agreed upon the tariff asking for a duty of 12 cents per pound upon unwashed merino wool, they did not comprehend, as they do to-day, the necessity for making a tariff law that will be considered so moderate by the whole people that it will endure the test of time. In fixing the rate of 12 cents they considered only what they thought was “most ample protection,” and gave no thought to the probability of 70,000,000 people concurring.

JUDGE LAWRENCE.

1. This was indorsed by the Farmers’ National Congress November, 1896, by the Ohio State Grange December, 1896, again by the National Woolgrower’s Association December 4–7, 1896, and again January 4–5, 1897.

2. The wool tariff act of 1867 gave a duty of from about 12 to 15 cents, according to value, when foreign wool prices were much higher than now. With high foreign prices less protection is needed; when they go down, more protection is needed.

MR. JUSTICE.

The wool tariff of 1867 imposed a duty of  $12\frac{1}{2}$  cents a pound and upward, and under it the flocks of the United States increased more rapidly than the flocks of any other nation of the world, when foreign prices were higher than they are to-day. But the value of everything has been reduced enormously since that time, and the woolgrower can not expect to be favored above other classes.

JUDGE LAWRENCE.

3. The act of 1883 gave from 10 to 12 cents per pound, according to value, when the foreign price was much more than now. But even with that protection, our sheep declined in numbers and value.

MR. JUSTICE.

The decline in the sheep under the tariff law of 1883 was not because the duty of 10 cents per pound was inadequate. It was because (owing to the careless wording of that law) the customer of the American wool-grower was not protected. Our mills were not employed. Foreign goods poured into this country, and our mills were idle, and owing to this

cause there was an indifferent market for wool. Foreign manufacturers were permitted to monopolize the American market. During the last four years of the law of 1883 the imports of "manufactures of wool" from Great Britain to the United States averaged annually 4,480,250 pounds, about 67 per cent more than was sent here under the average of the McKinley period, and the Continent sent about twice as much as was sent by Great Britain.

Third-class wools were sorted in Europe, and the finer grades were sent here as "carpet wool," but were used for clothing purposes, and highly purified scoured wools which should then have paid 60 cents per pound duty as broken-up tops were admitted as "waste" at only 10 cents per pound. The McKinley law remedied these faults, and flocks increased under the McKinley law, although the duty on unwashed wool of the first class was increased only 1 cent per pound.

#### JUDGE LAWRENCE.

4. The act of 1890 gave a duty of 11 cents, but under that (a) the prices of wool went down and down. (Senate Doc. No. 17, December, 1896, pp. 25-27.) (b) Sheep in Texas actually declined in numbers. (Senate Doc. No. 17, December, 1895, pp. 181, 209-211.) (c) The increase in the aggregate of numbers was slow and inadequate. (Senate Doc. No. 17, December, 1896, p. 144.)

The fact is, woolgrowers lived on hope rather than any sufficient benefits realized. The act was a failure by reason of defects, the effects of which were not foreseen, and by reason of ad valorem duties on third-class wools.

#### MR. JUSTICE.

American wool declined after the act of 1890 was passed because of the rapidly increasing supply of wool in the Southern Hemisphere, and while foreign prices fell American prices followed, but the foreign price averaged about 50 per cent below the McKinley price, and the fact that sheep declined in the single locality of Texas proves nothing, because the whole number of sheep in the United States increased rapidly under the law of 1890, and if that law had not been interrupted, on commercial estimates, and a little later on the estimates of the Department of Agriculture, the flocks of the United States would have been sufficient by the year 1905 to produce 650,000,000 pounds of wool, the quantity consumed by the American people, including that contained in all imported woolen goods.

#### JUDGE LAWRENCE.

5. The world's prices of wools declined from 1891 to 1895, 18 per cent, thus requiring more protection than in 1890. (Senate Doc. No. 17, December, 1896, p. 31.)

#### MR. JUSTICE.

The world's prices will continue to decline, and it will be impossible to provide for a graduated schedule that will always increase the duty as foreign prices fall. The cost of clothing to consumers will be gradually lower from year to year in consequence of the inevitable foreign decline, and the American woolgrower must be content if he has a duty upon imported wool that raises the price of the imported competing article 8, 9, 10, 11, or 12 cents per pound, as the case may be. This is the utmost limit of protection that the nation is willing to extend to any one branch of industry. Eleven cents per pound at the present moment

would be 50 per cent protection on the best grade of Port Phillip skirted wool, worth to-day 11 pence or 22 cents in London.

In order to ascertain what is ample protection, we must ascertain—

1. The cost of producing wools in the United States; and
2. The price at which foreign competing wools can be laid down at our principal wool markets—Philadelphia, New York, and Boston.

The principal wools of the United States are merino. The cost of producing these wools east of the Missouri River is (farm value) all of 20 cents per pound for unwashed merino, shrinking 66 $\frac{2}{3}$  per cent in scouring.

The cost in the Rocky Mountain region is all of 16 cents per pound.

This is shown in Senate Document No. 17, Fifty-fourth Congress, first session, memorial of National Woolgrowers' Association, December, 1895, pages 70, 107, 152-153.

The wools east of the Missouri are generally superior in quality to those west, and the farm value of the former unwashed is accordingly about from 3 to 5 cents per pound greater. (Senate Doc. No. 17, December, 1896.)

The Port Phillip Australian merino is more nearly of the quality of the merino grown east of the Missouri River, and is usually called the "competing wool." When unwashed, and even unskirted, the good grades will shrink in scouring only 50 per cent. But all foreign wools of every kind compete with all our American wools.

The merino wools of the Cape of Good Hope and of Argentina are inferior in quality to the Australian, and hence are called "competing wools" for those grown west of the Missouri River, though in fact all foreign wools of every kind compete with them also.

The London Wool Circular of Helmuth, Schwartz & Co., December, 1894, quotes London prices per pound as follows (Senate Doc. No. 17, December, 1896, p. 141):

|                                                          | d.              | Cents.            |
|----------------------------------------------------------|-----------------|-------------------|
| Buenos Ayres average greasy (36 per cent yield).....     | 4 $\frac{1}{2}$ | = 9               |
| Buenos Ayres average greasy (old 30 per cent basis)..... | 3 $\frac{3}{4}$ | = 7 $\frac{1}{2}$ |
| This makes the average price in London.....              | 4 $\frac{1}{8}$ | = 8 $\frac{1}{4}$ |
| Add freight and charges from London to Boston .....      |                 | 1                 |
| Cost in Boston.....                                      |                 | 9 $\frac{1}{4}$   |

This is an error. Ten and a quarter cents is the price of Buenos Ayres merino wool, which is a kind seldom imported into the United States. Manufacturers will not now have it in spite of its cheapness, even when free of duty. It is very burry and unsuitable for manufacture in the United States, where the question of dear labor comes in. The merino South American wools go to Europe, where the burry wool is manipulated by cheap labor. This wool will not be a severe competitor with American wools, except after it has been manipulated in Europe by the cheap labor there. As they were not imported when free of duty they never will be extensively imported under other conditions of tariff.

This is the competition which the merino wools west of the Missouri must encounter. It will cost an average of 3 cents per pound, including commission, etc., to ship these far West wools to Boston, which in competition with the foreign wool at 9 $\frac{1}{4}$  cents will make the ranch price per pound, without tariff benefit, 6 $\frac{1}{4}$  cents.

But a part of the Buenos Ayres wool quoted yields 36 per cent clean wool, which is from 3 to 6 per cent more than much of the wools west of the Missouri. And, first by reason of this, and, second, the fact that the lightest of the foreign wools will be imported, and, third, that some advantage should be given to our wool over the foreign, there should be deducted 1 $\frac{1}{4}$  cents.

This will leave the net ranch price 5 cents.

The correctness of this is shown by the fact that Justice, Bateman & Co. quote the ranch price, July 1, 1896, at 4 cents. A tariff rate of 12 cents per pound will never give a "protective benefit" equal to the tariff rate. But suppose it gives a protective benefit of 10 cents?

This would give the price the Far-West woolgrowers would receive, actual ranch value—the price at the nearest local market—per pound only 15 cents.

This computation is on price quotations in 1894, with 1 cent added for freight from London to Boston. But in fact South American wool can be laid down in Boston as cheaply as in London, and this is 1 cent in favor of the foreign wool.

The wool quotations for 1896 bring a similar result.

The Liverpool wool circular, December 19, 1896, of J. L. Bowers & Bro., quotes as follows:

|                                                                          | d. | Cents. |
|--------------------------------------------------------------------------|----|--------|
| Montevideo merino unwashed, per pound, good average .....                | 6½ | = 13   |
| Lima, unwashed, average.....                                             | 5½ | = 11   |
|                                                                          |    | —      |
| The average of the two would be .....                                    |    | 7      |
| Add 1 cent for shipment to Boston .....                                  |    | 1      |
|                                                                          |    | —      |
| Total Boston price .....                                                 |    | 8      |
| Allow 3 cents for cost of shipping wool from the Rocky Mountain region.. |    | 3      |
|                                                                          |    | —      |
| Leaves ranch value only .....                                            |    | 5      |

This is clearly an error, and the ranch value would be 10 cents instead of 5 cents. Judge Lawrence is 50 per cent out of the way in his calculation, which doubtless is the result of an error. He no doubt would publicly correct the misstatements in this paragraph if his attention was called to it, but the thousands of readers who will see it will assume Judge Lawrence's authority to be infallible, and much harm will be done by this unfortunate error.

A duty of 12 cents, if it gave a protective benefit at that rate—as it would not—would make the ranch price 17 cents.

This is allowing 1 cent for freight from Liverpool to Boston, when the wool can be laid down as cheaply in Boston as in Liverpool.

I have used the quotations of "good average," but even this will command more price in Boston than the entire average of the merino of the Rocky Mountain region.

And there is the additional fact to be considered: That whenever a tariff shall be imposed, foreign wools will come down in price in order to secure our market.

This we may know (1) from experience, and (2) it may be inferred from the evidence of Manger & Avery, New York wool importers. (Senate Doc. No. 17, December, 1896, p. 64.)

The London Wool Circular of Helmuth, Schwartz & Co., December, 1896, quotes "Port Philip average to good scoured" and "skirted" at 28 cents per pound. The letter of Theodore Justice, March 5, 1894, shows that scoured Port Philip was then, London price, skirted, only 30 cents per pound. And this will sell in Boston for 5 to 9 cents more than average scoured Ohio merino. (Senate Mis. Doc. 124, Fifty-third Congress, second session, 101.)

#### JUDGE LAWRENCE.

This can be laid down in Boston for 1 cent per pound, but call it 1½ cents, and this makes the Boston price per scoured pound 29½ cents. But call it 30 cents. This is the competition to which the merino wools east of the Missouri River are subjected.

Hon. George H. Wallace, United States consul-general to Melbourne under the Administration of President Harrison, shows that Australian merino "skirted" wools can be put on shipboard at Melbourne for 12 cents per pound, and that whole fleeces can be placed on shipboard for 9 cents per pound. His statement is quoted in full in my argument before the Committee on Ways and Means (January 6, 1897) Quarterly Bulletin of the National Woolgrowers' Association, Boston, January 1, 1897). And this wool will shrink in scouring only 50 per cent.

This is the competition Ohio and similar wools must encounter—scoured and skirted foreign wools laid down in Boston at less than 30 cents per pound.

With the foregoing data, the conclusion is inevitable that a duty of 12 cents per pound is not only just and necessary, but moderate.

It will require 3 pounds of Ohio and similar unwashed merino to make 1 scoured pound. It will cost 3 cents per pound to reach the Boston market, including (1) local wool buyers' profit; (2) freight; (3) eastern commission merchant charges; (4) insurance, etc., making for 3 pounds 9 cents.

Here, then, are 9 cents to be deducted from the Boston value of 1 pound of scoured Port Phillip, leaving the farm value of each unwashed pound of Ohio merino, shrinking 66⅔ per cent in scouring, without tariff benefit, 7 cents per pound.

If a tariff of 12 cents would give a protective benefit of that amount—as it will not—this would make the farm value per pound of unwashed merino 19 cents.

Justice, Bateman & Co. quoted farm value July 1, 1896, without tariff, at 9 cents, and a "protective benefit" of 12 cents would make it 21 cents. It is safe to say that

with a wool tariff of 12 cents per pound, the farm value in Ohio and other States east of the Missouri would reach only about 20 cents per pound.

It is well known that for Port Phillip merino, though of less intrinsic value than Ohio, yet by reason of its soft condition and its luster, fashion has made a demand which makes it command in the market, even unskirted, from 1 to 2 cents per pound more than Ohio, leaving farm value only 19 cents; and under a tariff foreign wool prices would be reduced to get into our market. If fashion requires foreign wool, those who indulge in the luxury of foreign fashion should pay a luxurious duty.

The conclusion is inevitable that the duty of 12 cents per pound, in view of present and prospective conditions, is only moderate protection—very moderate.

In this connection there is one remarkable fact which should be kept in mind: Not one of the woolgrowers, or wool manufacturers, or others who oppose the rates of duty asked for by the woolgrowers, give any computation showing the reasons for the lower duties they advocated. Why this absence of facts and figures? Theories, guesses, dogmatic conclusions, are entitled to no weight. Figures can not lie, and I have given the figures. Let those who insist on lower duties give facts, figures, reasons.

1. The wool tariff act of 1867 gave a duty of about 13 cents per pound on unwashed merino, 26 cents on washed, and 39 cents on scoured.

The act of 1883 gave a duty of 10 cents on unwashed, 20 cents on washed, and 30 cents on scoured.

These duties were given because the real value of wool as shorn from the sheep in the grease, unwashed, depends on the clean or scoured product; and the general average of the merino wools of the world will shrink in scouring  $66\frac{2}{3}$  per cent, leaving clean wool  $33\frac{1}{3}$  per cent. The duty was based on the theory that the unwashed fleece would shrink in washing  $33\frac{1}{3}$  per cent, and in scouring  $66\frac{2}{3}$  per cent. The shrinkage in washing will depend on its extent, but the general result is as stated, and certainly only  $33\frac{1}{3}$  per cent of scoured wool.

The McKinley Act of 1890 gave a duty of 11 cents per pound on unwashed merino, 22 cents on washed, and 33 on scoured. Its purpose was to give a protective benefit of 11, 22, and 33 cents; that is, to enhance the price of our American merino by so much over the price at which foreign competing wools could be laid down in Boston.

2. In 1867 the process of "skirting" fleeces—cutting off the belly, britch, and other inferior portions, so as to make the skirted portion more salable—was unknown. It is a modern invention to defeat in part the protective benefit of the tariff and to save the cost of "sorting" in the United States. This robs the American citizens of employment and wages of \$1,000,000 a year.

#### MR. JUSTICE.

The question of skirting wools is not an invention to defeat the American tariff. The wools of the Southern Hemisphere are skirted in order to suit the wants of the manufacturers of the world who buy them. British manufacturers pay  $33\frac{1}{3}$  per cent more wages than are paid in Germany, and they require skirted wools, and the skirts go to Germany, where cheap labor manipulates them. While it is true that the skirting of wool has deprived 20,000 American wool sorters of employment, it is a change that marks an advance in the method of marketing wool, and benefits the buyer of wool, just as the invention of a sewing machine deprived hundred of sewing women of employment, but benefits mankind. It is in the march of improvement.

#### JUDGE LAWRENCE.

This process is now practiced in Australia for all wool for market in the United States, but it has as yet been introduced in South America only to a limited extent.

#### MR. JUSTICE.

The process of skirting wool, which was formerly practiced in Australia, is now being very extensively used in South America. Millions of pounds of South American crossbred wools are produced by crossing Lincoln rams upon the Merino ewes, which is making a splendid combing wool, and which is so cheap that it must soon even crowd wool-growing out of England itself, unless they adopt some form of a tariff

for protection. These wools are very burry on the skirts, and they are skirted in South America, and the burry skirts sent to the Continent of Europe where they are manipulated by cheap labor. The body sort, that containing the fewest burs, is now coming to the United States. The practice of skirting is so rapidly increasing, that in time it will probably become as universal in South America as it is now in Australia. Tariff legislation will not check it, and if skirted wools are to pay a penalty, the difficulties of collecting the duty at the custom-house will be increased, for the honest importer who knows his wools to be skirted will invoice them as skirted wools, while the dishonest importer will invoice his wools as "unskirted," when in point of fact they are skirted, and custom-house appraisers are offered temptations to favor their friends. They are open to temptations of corruption and bribery where there is a discriminating duty between those which are skirted and those which are not, which only an expert can determine, and the woolgrower will only get the amount of protection afforded by the lower or unskirted duty. If the grower is to get no benefit, it will practically be a dead letter.

JUDGE LAWRENCE.

The tariff acts of 1867 and 1883 made no provision on the subject of skirting, because it was not foreseen by Congress, if by others, that such a contrivance would be resorted to in fraud of the law. When the McKinley bill was before Congress it contained a provision to prevent sundry frauds on the law, including that of "skirting," but a few wool manufacturers succeeded in securing a proviso excepting skirted wools from its operation.

MR. JUSTICE.

The provision exempting skirted wools from a penalty in the McKinley law was agreed to in a convention of woolgrowers and woolen manufacturers. It was well understood at the time, and was agreed to with only one dissenting voice. It was clearly shown, when the matter was under discussion, that a penalty for skirting wools would act as a premium for the woolgrowers to fraudulently pack manure inside of their fleeces. Instead of inducing them to put up their wools honestly, such a provision would be an inducement to put them up with a view to deceive the buyer.

JUDGE LAWRENCE.

The bill which now has the sanction of the woolgrowers omits the skirting clause—that is, it requires an increase of duty on skirted wools.

MR. JUSTICE.

Of course American woolgrowers who do not skirt their fleeces object to the competition of the wools of the world which are skirted, but the time is coming when even Americans will have to skirt their wools just as the time has come for the sewing machine to take the place of the needle woman. It is in the march of the time. Street cars propelled by electricity might as well be superseded by horses as to attempt to go back from skirted wools to the practice of marketing wools unskirted.

JUDGE LAWRENCE.

The Australian merino has a peculiarity not found in any other of the wools of any other country, except in rare instances. By reason of climatic conditions the Australian wool is so light and clean that even unwashed and unskirted it will

shrink in scouring only 50 per cent—certainly such as would be imported under a tariff—always the lightest. The result is that unwashed unskirted Port Phillip Australian merino is lighter, cleaner, and will command in Boston a little more than the washed merino grown east of the Missouri River, and by reason of its superior quality considerably more than the merino grown west of that river.

Mauger & Avery, eminent wool importers of New York, have demonstrated that on July 1, 1893, when the New York price of Ohio washed merino was 24 cents per pound, and Port Phillip good average grease unwashed in London 18 cents, the McKinley duty of 11 cents only gave a protective benefit of 6 cents per pound to Ohio washed merino, shrinking 55 per cent in scouring, in competition with Port Phillip unwashed. Thus the McKinley tariff, which was intended to give 22 cents protection on Ohio washed wool, only gave 6 cents. (Senate Doc. No. 17, December, 1896, p. 63; per Gov. Rich, Senate Mis. Doc. No. 35, Fifty-third Congress, second session, p. 321.)

And as a consequence of this, the merino unwashed wools of Argentina, shrinking like Ohio 66½ per cent in scouring, were excluded from our market, and Australia monopolized substantially our whole market. This is shown by the report of our consul at Buenos Ayres to the State Department. (Senate Doc. No. 17, December, 1896, p. 122.) The injustice of this to our sister Republics of South America and its impolicy must be manifest.

#### MR. JUSTICE.

Under the McKinley law and any tariff law merino wools that shrink over 66½ per cent in scouring are excluded from our market, because the compensatory duty of four times the duty upon 1 pound of unwashed wool is insufficient to permit the purchase of such wools. If a penalty is imposed upon skirted wool, it is equivalent to the increase in the cost of all wool, and will involve an increase in the compensatory duty upon cloth, which is not to be considered. The greatest obstacle to a duty upon wool, and the weapon which free traders use to best advantage in opposing the wool duties, is the necessary compensatory duty upon cloth, a feature necessary to enable the manufacturer to pay a duty upon wool, for without this his mills would be closed and there would be no market for American wool. A compensatory duty upon foreign cloth of four times the duty upon unwashed merino wool is necessary to make a home market for American wool. If this is taken from the American manufacturer, cloth will be manufactured abroad, and the American woolgrower would have no sale for his wool except in foreign markets, where American wools are not liked, and when offered for sale, as they were at the recent London auctions, there were no bids, and the wool had to be withdrawn.

#### JUDGE LAWRENCE.

The woolgrowers' bill proposes to remedy this wrong by providing that the unwashed Australian merino and others of similar light shrinkage shall be deemed washed. This is justified.

#### MR. JUSTICE.

The provision requiring Australian merino and other similar light shrinking unwashed wool to pay a double duty the same as though washed, would (without a corresponding increase in the compensatory duty) be equivalent to making the duty upon Australian wool 24 cents per pound unwashed. This would be more than double the McKinley rates. Such a bill could not pass and if it did it would make the whole tariff law so unpopular that protection for wool would receive a death blow from which it would not recover for a generation.

Assuming that the duty upon unwashed Australian wools is to be 12 cents per pound (as Judge Lawrence wishes) and it paid the penalty of a double duty because of its light shrinkage, the duty would be 24 cents. Deduct from this 5 per cent, which represents its increased value by reason of being skirted, and you have 22.80 cents as the

proper duty for unskirted wool. The compensatory duty therefore on a pound of cloth would have to be four times 22.80 cents, or 91.20 cents, per pound on every pound of cloth instead of 48 cents per pound if the duty was 12 cents, or 36 cents per pound if the duty was 9 cents. This would be exorbitant and absurd. It would kill the tariff bill; it would be indefensible, and without such a compensatory duty every mill in the country would be closed, and there would be no home market for wool.

JUDGE LAWRENCE.

1. Because without it a tariff of 12 cents per pound or any fixed rate gives no protective benefit to American unwashed merino. This is shown by the evidence of the Government actuary, Joseph S. McCoy, in my argument to the Committee on Ways and Means.

MR. JUSTICE.

The duty of 11 cents per pound on skirted wools under the McKinley law was so protective, that our flocks increased rapidly, and according to commercial estimates, if that law had remained undisturbed, by 1905 we would by that time have produced 650,000,000 pounds of wool, the quantity now consumed by the American people, including the wool contained in imported cloth.

JUDGE LAWRENCE.

2. It simply places Australian merino on an equal footing with the other merino wools of the world.

MR. JUSTICE.

The merino wools of the world shrinking over 60 per cent, inclusive of Australian exceeding that shrinkage, were prohibited by the McKinley tariff because their shrinkage exceeded 60 per cent, and with a compensatory duty of four times the duty upon 1 pound of unwashed wool it would again be impossible to import any merino wools shrinking over 60 per cent, so that if a double duty was placed upon skirted wools (as is proposed by Judge Lawrence), all Australian merino wools would be prohibited (without a corresponding increase in compensatory duties on cloth), as South American wools were under the McKinley law.

JUDGE LAWRENCE.

3. It is necessary to secure reciprocal commercial treaties with South American Republics required by our interests.

MR. JUSTICE.

Secretary Blaine found no difficulty in arranging reciprocity treaties with South American Republics. What was done before can be done again. Reciprocity is not a lost art.

JUDGE LAWRENCE.

1. And here we are met with the plausible but misleading cry that we are asking for a duty of 24 cents per pound on wool. This, standing alone, is to those who have not studied, and hence do not understand the subject, a *suppressio veri, suggestio falsi*.

2. We ask only for 12 cents per pound duty on merino wools shrinking 66 $\frac{2}{3}$  per cent in scouring. This 24 cents duty is only equal to 12 cents on all other merino wools of the world.

MR. JUSTICE.

The demand for 24 cents a pound upon unskirted wool is equivalent to asking for 22.8 cents per pound upon unskirted wool. Public opinion seems to vary between 9 cents as the lowest and 12 cents as the highest that would be considered tolerable by the great mass of American people who are not directly interested in producing wool. It is doubtful if the people will consent to any rate higher than the McKinley law, even if it can be shown that less than 12 cents would be inadequate in the course of time. At this time 9 cents would be ample, by 1901 it would not.

JUDGE LAWRENCE.

Without it the effect of a duty of 12 cents on Port Philip unwashed would only give a protective benefit of about 6 cents per pound on Ohio washed wool, and only the unwashed Port Philip would be imported. This means ruin to our American wool industry.

MR. JUSTICE.

The American wool industry was not ruined under the McKinley law when the duty was 11 cents per pound upon unwashed skirted Port Philip wool. The price of the best grades of Port Philip during the McKinley period averaged below 22 cents, the present price.

The American wool industry would prosper more rapidly under the reenactment of the McKinley law than it did during the time that that law was in operation, because of the bitter experience taught by several years' actual practice and trial of free wool. Nine cents per pound now would be more prized by them than was 11 cents in 1890.

JUDGE LAWRENCE.

3. We ask that Australian unwashed merino shall pay the same duty as that imposed on wools of all other countries of similar shrinkage—no more, no less—that is, 24 cents per pound, or on scoured 36 cents.

MR. JUSTICE.

The duty of 24 cents per pound upon unskirted Australian would be equal to a duty of 48 cents per pound on the best Port Phillip scoured, for it takes 2 pounds of the best skirted Port Phillip to make 1 pound of scoured. As the duty of 24 cents per pound upon skirted Port Phillip is the same as 22.8 cents per pound on unskirted, the duty upon scoured, when made from unskirted, will be 45.6 cents per pound.

JUDGE LAWRENCE.

4. This is "equal and exact justice:" (a) To American wool growers; and (b) to all the woolgrowing countries of the world. (c) It has been thrice indorsed by the National Woolgrowers' Association, once by the Farmers' National Congress, and by the Ohio State Grange. (d) In view of all this, the objection to it is—*Vox et præterea nihil*—"sound and fury signifying nothing," when properly understood.

MR. JUSTICE.

This is simply, Judge Lawrence, a case where the tail wags the dog.

JUDGE LAWRENCE.

On the 6th of January, 1897, representatives of the National Woolgrowers' Association were heard in argument before the Committee on Ways and Means in Congress in support of the woolgrowers' bill. By direction of the association I submitted an argument having its approval, except that some three or four, supposing, as I understood, that we might not be able to secure the duty asked for on Australian merino, deemed it inexpedient to ask it, lest it might injure our cause.

Two of these—all true friends in purpose of woolgrowers—gave their views to the Committee on Ways and Means. I do not understand that they were willing to consent to less than 24 cents per pound duty on washed merino from any country, but I fear the effect of their position was to aid those who oppose adequate protection.
